

### FEATURES

- Two independent clock outputs available
- On chip Phase Locked Loops with VCO and integrated loop filters for low jitter clock outputs
- Mask option for 16 + 4 frequencies, or 8 + 8
- Frequencies up to 130 MHz on each output clock generated internally
- Low power CMOS technology
- 20 pin PDIP or SOIC package
- Minimum number of external components
- Tristate outputs
- Pin compatible with ICS2494 and ICS90C64
- Crystal oscillator circuitry with output clock

### GENERAL DESCRIPTION

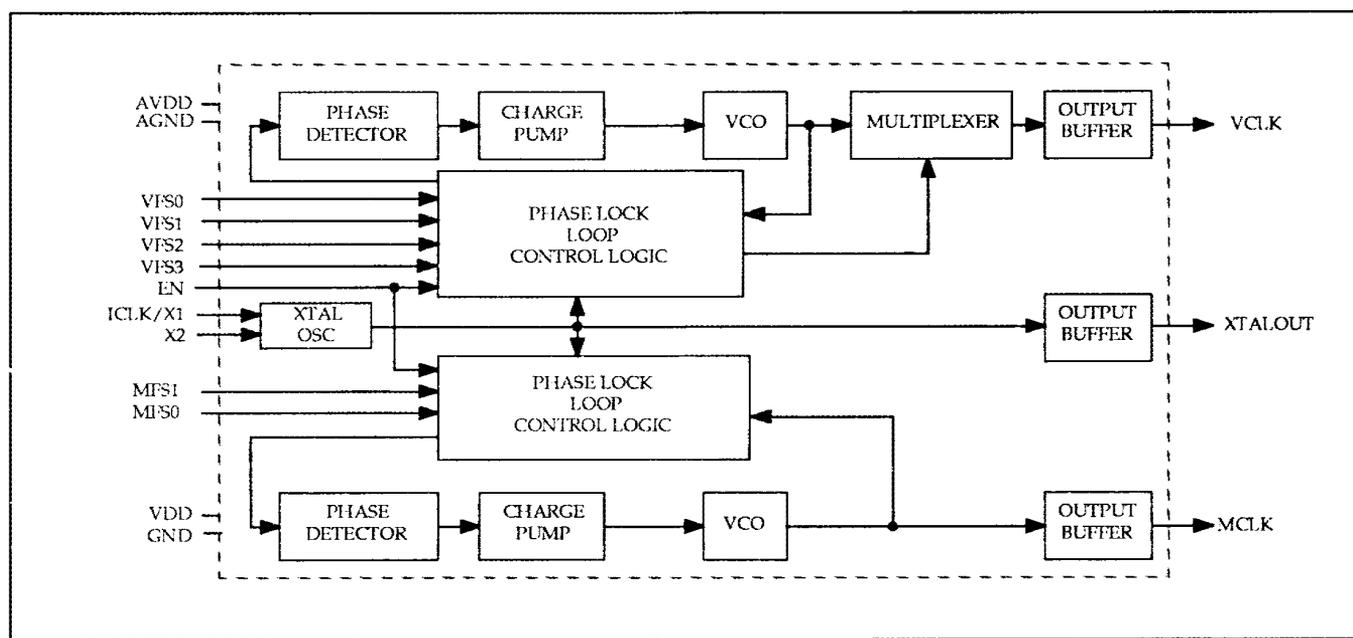

The AV9194 is a dual output frequency generator that is ideal for graphics applications. The device can replace many crystal oscillators by containing all of the required output frequencies on-chip. The AV9194 can use either a crystal or TTL level clock for its input reference frequency. On notebooks and other motherboards, the 14.318MHz input can be generated by the AV9128/9 or the AV9152/3/5. Utilizing Avasem's proprietary analog CMOS Phase Locked Loop (PLL) technology, this reference frequency is used to generate two independently controlled output clocks, VCLK and MCLK. Up to 20 output frequencies, ranging from 5 to 130 MHz, can be mask programmed into the device at the time of manufacture. The six Frequency Select pins are used to choose one of 16 (or 8) masked output frequencies on the video clock, VCLK, and one of 4 (or 8) frequencies on the second clock, designated MCLK. This second clock can be used as a memory clock to time DRAMs and VRAMs, as another video (or pixel) clock, or as a system clock required by graphics processors like the 8514A and 34010/20. Standard versions of the AV9194 are available.

The AV9194 is one of the latest in Avasem's frequency generator family. Avasem has devices that are designed for many computer and computer peripheral applications, all manufactured in analog CMOS technology.

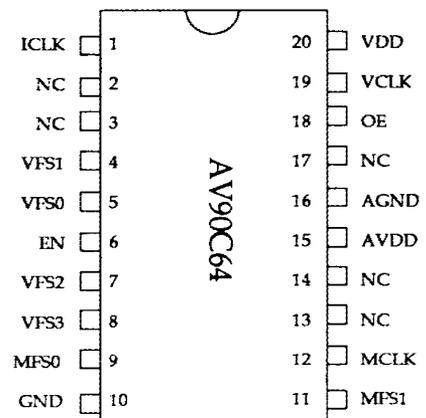

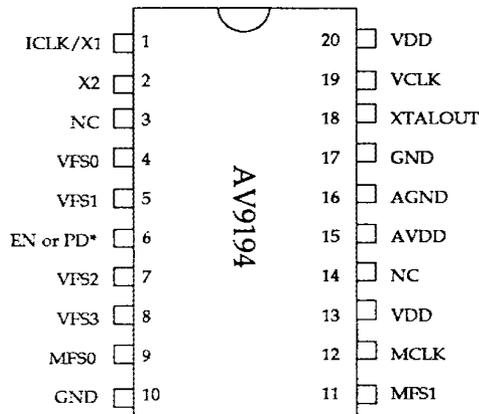

### APPLICATIONS

Graphics: Many video graphics systems now utilize multiple clock oscillators to provide all of the frequencies required for different monitors and modes of resolution. In addition, many graphics processors require one separate fixed frequency for the memory or system clock. By providing two independent output clocks, the AV9194 saves power, board space, and cost in eliminating these oscillators.

### BLOCK DIAGRAM

### PIN CONFIGURATIONS

### PIN DESCRIPTION FOR AV9194 / AV90C64

Pin Name	Pin #		Pin type	Description
	AV9194	AV90C64		
ICLK/X1	1	1	Input	INPUT CLOCK. TTL clock signal or crystal input
X2	2	-	Output	CRYSTAL OUT. Connect when using crystal or ceramic resonator
NC	3	3	-	NOT CONNECTED. No internal connection
VFS0	4	5	Input	VIDEO FREQUENCY SELECT 0 (LSB)
VFS1	5	4	Input	VIDEO FREQUENCY SELECT 1
EN	6	-	Input	ENABLE. Transparent high. A low latches the frequency select data
EN	-	6	Input	ENABLE. Latches VFS0-VFS3 and MFS0, MFS1 upon rising edge
PD*	6	-	Input	POWER DOWN. Turns off V+MCLK when low (AV9194-46 only)
VFS2	7	7	Input	VIDEO FREQUENCY SELECT 2
VFS3	8	8	Input	VIDEO FREQUENCY SELECT 3 (MSB)
MFS0	9	9	Input	MEMORY FREQUENCY SELECT 0 (LSB)
GND	10	10	-	DIGITAL GROUND
MFS1	11	11	Input	MEMORY FREQUENCY SELECT 1 (MSB)
MCLK	12	12	Output	MEMORY CLOCK output
VDD	13	-	-	Digital power supply. Connect to +5V DC supply
NC	14	14	-	NOT CONNECTED. No internal connection
AVDD	15	15	-	Analog power supply. Connect to +5V DC supply
AGND	16	16	-	ANALOG GROUND
GND	17	-	-	DIGITAL GROUND
XTALOUT	18	-	Input	CRYSTAL CLOCK OUTPUT
OE	-	18	Input	OUTPUT ENABLE. Tristates VCLK when low
VCLK	19	19	Output	VIDEO CLOCK output to drive pixel clock
VDD	20	20	-	Digital power supply. Connect to +5V DC supply

### AV9194 and AV90C64 Standard Versions

Mask Number	AV9194-04	AV9194-07	AV9194-46	AV9194-56	AV9194-60	AV90C64
VGA Controllers	Tseng Labs ET4000	S3 (NewProducts)	NCR 77C22E	S3 86C911, 86C924	Weitek 5X86	WD (All)
VCLK ADDRESS	VCLK OUTPUT (MHz)					
0	25.175	25.175	25.175	25.175	50.35	30.00
1	28.322	28.322	28.322	28.322	56.644	77.25
2	32.514	40.0	36.00	40.0	33.25	0.00

3	56.00	50.00	75.00	80.00	50.00	44.30

Avasem is continually developing new standard versions of the AV9194. Consult your local sales representative for the latest Avasem products.

### ABSOLUTE MAXIMUM RATINGS

AVDD, VDD referenced to GND.....	7V	Power dissipation.....	0.5 Watts
Operating temperature under bias.....	0°C to +70°C	ESD rating as per MIL-STD-883D, Method 3015,	
Storage temperature.....	-40°C to +125°C	any pin.....	2000V
Voltage on I/O pins referenced to GND.....	GND - 0.5V to VDD +0.5V		

Note: Stresses above those listed under Absolute Maximum ratings may cause permanent damage to the device. This is a stress rating only and functional operation of the devices at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum conditions for extended periods may affect devices reliability.

### ELECTRICAL CHARACTERISTICS

( $V_{DD} = +5V \pm 10\%$ ,  $T_A = 0^\circ C$  to  $70^\circ C$  unless otherwise stated)

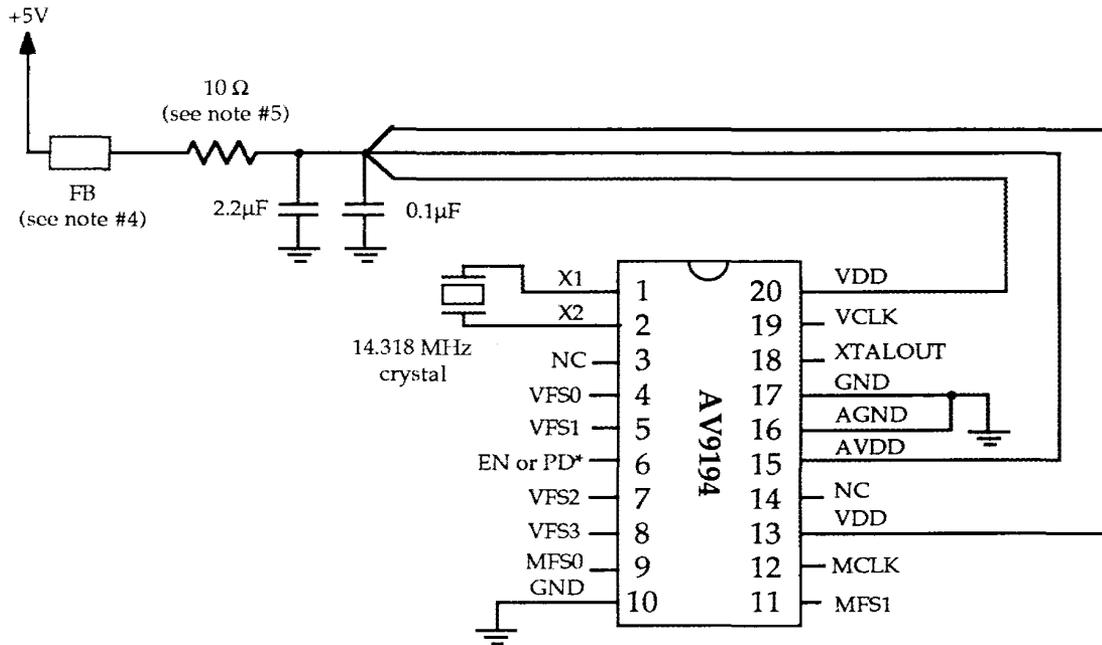

Symbol	Parameter	Min	Typ	Max	Units	Conditions
<b>DC CHARACTERISTICS</b>						
$V_{IL}$	Input Low Voltage	-		0.8	V	$V_{DD} = 5V$
$V_{IH}$	Input High Voltage	2.0		-	V	$V_{DD} = 5V$
$I_{IL(1)}$	Input Low Current	-5		-50	$\mu A$	$V_{IN} = 0V$
$I_{IH}$	Input High Current	-		5	$\mu A$	$V_{IN} = VDD$
$V_{OL}$	Output Low Voltage	-		0.4	V	$I_{OL} = 8mA$
$V_{OH}$	Output High Voltage	VDD-4V	-	-	V	$I_{OH} = -1mA, VDD = 5.0V$
$V_{OH}$	Output High Voltage	VDD-8V	-	-	V	$I_{OH} = -4mA, VDD = 5.0V$
$V_{OH}$	Output High Voltage	2.4	-	-	V	$I_{OH} = -8mA$
$I_{DD}$	Supply Current		20		mA	No load. 28 and 40MHz
$I_{DDBS}$	Supply Current, Power Down (AV9194-46 Only)		30	50	$\mu A$	No load. 28 and 40MHz
$R_{UP(1)}$	Internal Pullup Resistors		500		K $\Omega$	
$F_d$	Output Frequency Change over Supply and Temperature			0.01	%	With respect to typical frequency
$C_i$	Input Capacitance			8	pF	$F_c = 1 MHz$

NOTES: (1) Input pins VFS0-VFS3, MFS0, MFS1, EN, OE and PD\* have internal pull-up resistors.  
 (2) Pins X1 and X2 have on-chip capacitors of 20pF to GND and are tied together by a 1M $\Omega$  on-chip resistor.

### AC CHARACTERISTICS

$t_{CLKR}$	Input Clock Rise Time			20	ns	
$t_{CLKF}$	Input Clock Fall Time			20	ns	
$t_w$	Enable pulse width	20		-	ns	
$t_{su}$	Setup time data to enable	20		-	ns	
$t_{hd}$	Hold time data to enable	10		-	ns	
$t_r$	Rise time, 0.8 to 2.0 Volts	-	1	2	ns	25 pf load
$t_r$	Rise time, 20% to 80%	-	2	4	ns	25 pf load
$t_f$	Fall time, 2.0 to 0.8 Volts	-	1	2	ns	25 pf load
$t_f$	Fall time, 80% to 20%	-	2	4	ns	25 pf load
$d_t$	Duty cycle, MCLK and VCLK		48/52	40/60	%	25 pf load
$f_{in}$	Input frequency, ICLK	5	14.318	20	MHz	
$t_{j1s}$	Jitter, 1 sigma		$\pm 75$		ps	
$t_{jab}$	Jitter, absolute		$\pm 325$	$\pm 500$	ps	
$f_{max}$	Maximum Output Frequency			135	MHz	

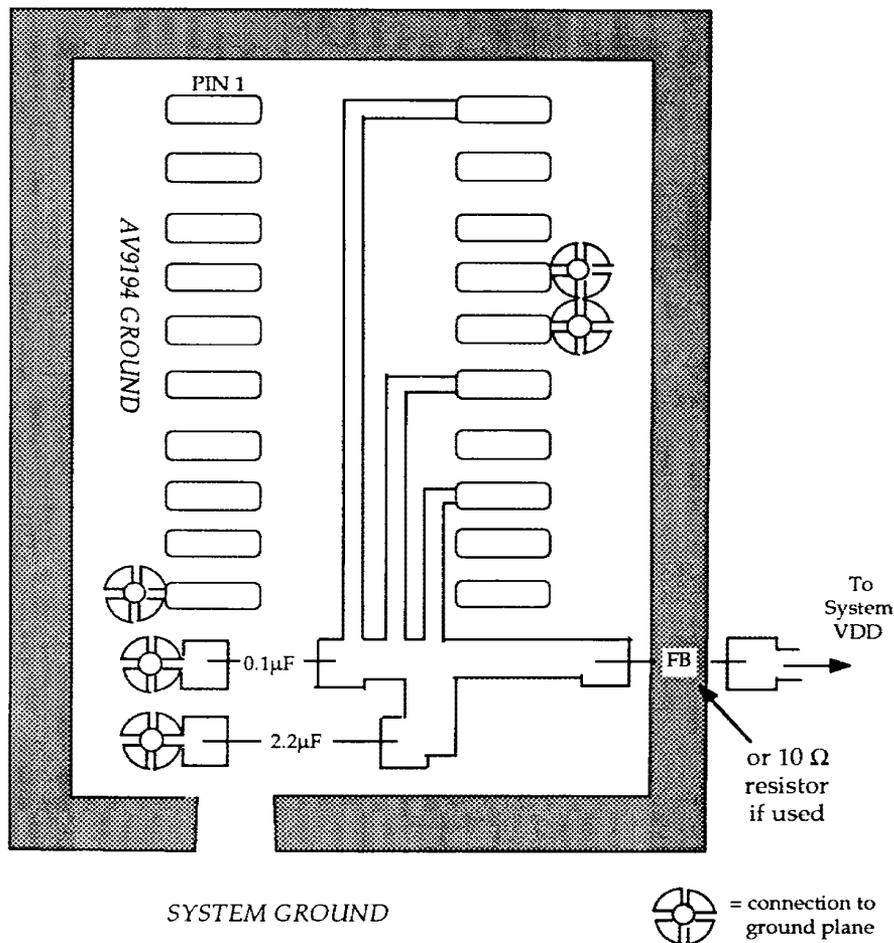

### AV9194 Recommended External Circuit

Notes:

1. AvaseM recommends the use of an isolated ground plane for the AV9194. All grounds shown on this drawing should be connected to this ground plane. This ground plane should be connected to the system ground plane at a single point. Please refer to AV9194 Board Layout diagram.
2. A single power supply connection for all VDD lines at the decoupling capacitors is recommended to reduce interaction of analog and digital circuits. The decoupling capacitors should be located as close to the VDD pins as possible.
4. The ferrite bead does not enhance the performance of the AV9194, but will reduce EMI radiation from the VDD line.
5. The 10  $\Omega$  resistor is optional for noisy power supply applications. It is used to reduce clock jitter which may be induced by excessive power supply noise.

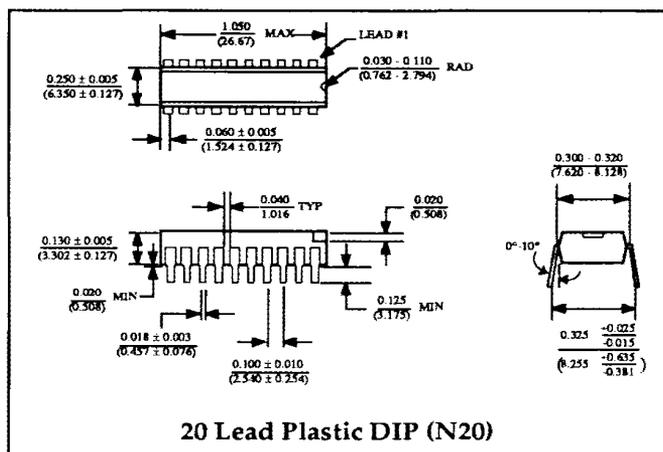

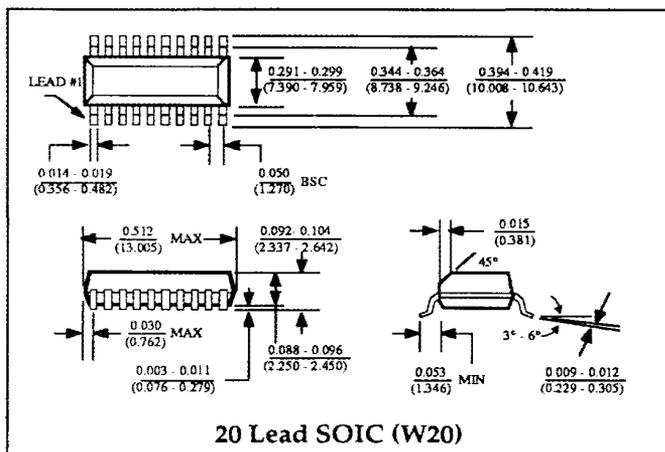

### AV9194 BOARD LAYOUT

This is the recommended layout for the AV9194. Shown are the power connections and the ground plane.

The most important feature is the isolated ground plane, connected at one point near the 2.2µF and 0.1 µF decoupling caps. The ferrite bead is optional, but will help with EMI radiation from the power supply trace. In applications with an excessively noisy power supply, a 10 Ω resistor in the power supply line (between the decoupling caps and the ferrite bead, if used) is recommended to reduce induced clock jitter. The traces to distribute power should be as wide as possible.

If a crystal or crystal oscillator is used, it should be surrounded by the isolated ground plane. Clock output traces should be kept narrow, and distance over isolated ground plane should be kept to a minimum to reduce coupling.

### ORDERING INFORMATION

Part Number	Temperature Range	Package Type
AV9194-xxCN20	0°C to +70°C	20 lead Plastic DIP
AV9194-xxCW20	0°C to +70°C	20 lead SOIC

Note: The dash number following AV9194, (denoted by xx above) must be included when ordering product since it specifies the mask options being ordered. Please request an AV9194 customer order form when ordering custom masks.

Avasem's products are not intended for use as a component of any life support system unless a specific written agreement regarding such use is executed between the customer and Avasem.

Avasem Corporation reserves the right to make changes in the circuitry or specifications of any of its products at any time without prior notice. Avasem assumes no responsibility for the use of any circuits described and makes no representation that they are free of patent infringement.
