

# PRODUCTS GUIDE

A Short-Form Reference to  
**Harris Semiconductor Products**

**HARRIS**

# INTRODUCTION

Harris Semiconductor Sector is a leading manufacturer of analog, digital, microwave, semicustom and custom integrated circuits. All represent the state-of-the-art in complexity and performance.

Because of this expertise in design and production, Harris can offer you the most reliable product available in a wide variety of formats, options and packages.

Continuing research and development maintains our position among the top 10 largest U.S. merchant producers of semiconductors. Harris is recognized worldwide as an industry innovator and technology leader.

This booklet contains brief descriptions of all Harris silicon and gallium arsenide products currently available. Plus helpful information on packaging and a product cross reference. For more detailed information, contact your local Harris sales representative or call our literature dept. (305) 724-7418.

## Analog Products

Harris is a major force in analog integrated circuitry, with a broad line of products — including bipolar and CMOS switches, multiplexers, data acquisition and conversion circuits and telecommunications products — recognized industrywide for their high performance and reliability.

Two material processes, Dielectric Isolation (DI) and Complementary Metal Oxide Semiconductor (CMOS), are prime examples of Harris leadership in high-performance analog products development.

The DI process developed by Harris surrounds a single crystal chip on all sides with a layer of silicon dioxide to produce a device that can meet the high-performance, high-voltage and high-temperature requirements of telecommunication, military and radiation-resistant space circuits.

The Harris SAJI (Self-Aligned Junction Isolation) CMOS process is key to attaining the low-power, high performance and density potential of LSI (Large Scale Integration) and VLSI (Very Large Scale Integration).

This commitment to innovation, coupled with strong engineering and processing capabilities, enables Harris to continually give customers the competitive edge.

## Custom Integrated Circuits Division (CICD)

Harris designs, develops and manufactures custom analog, digital bipolar and CMOS circuits for specialized military and commercial applications.

In the government marketplace, Harris is a leading supplier of radiation-hardened ICs for a number of U.S. military projects such as the Peacekeeper and advanced Trident missile programs, B-1B bomber and major satellite programs. Harris recently introduced the 80C6RH radiation-hardened 16-bit CMOS microprocessor family.

Harris is also using its systems expertise and semiconductor technologies to meet the challenge of VHSIC-like, next-generation micron and submicron IC systems for DOD.

CICD also produces an array of non-military custom and semicustom products. These include commercial aircraft ICs as well as rad-hard telecommunications, electronic data processing and industrial environment suited parts. These hardened parts are in many cases, "plug-in" replacements for regular commercially available ICs and are especially suited for satellite usage.

Harris Semiconductor's Melbourne, Florida, complex contains complete facilities for design, masking, wafer fab and final testing.

## Digital Products

Harris is a pioneer in the development and production of digital integrated circuits, achieving many breakthroughs in CMOS and bipolar technology: the first 16-bit CMOS microprocessor family (80C86); the industry's first bipolar PROM; first 64K bipolar PROM; first CMOS PROM; first 4K static CMOS RAM; first 256K static CMOS RAM module; and, most recently, the first CMOS programmable logic circuit.

Harris is also a major producer of digital semicustom standard-cell and gate array circuits for military, data processing, communication, medical and instrumentation applications.

More than a decade of technological creativity and performance — marked by continual research and development, increasing quality control and a relentless commitment to excellence — has made Harris today's leader in digital products.

## Microwave (GaAs) Products

Harris Microwave Semiconductor was established in 1980 in Milpitas, California, with a clear goal: research and develop gallium arsenide technology for use in electronic systems requiring great speed, high frequencies and extreme miniaturization.

Today, this Harris company is setting new standards in manufacturing consistency in the production of GaAs FETs and microwave amplifiers. In 1984, Harris Microwave introduced the world's first commercial GaAs digital integrated circuits. These ultra-high speed ICs provide the ultimate in speed for super computers and other signal processing and communication applications.

# CMOS 8/16-BIT MICROPROCESSORS

## 16-Bit Microprocessor 80C86

### Features

- Compatible with NMOS 8086
- Completely static design
  - DC to 5 MHz (80C86)
  - DC to 8 MHz (80C86-2)
- Low power operation:
  - 10 mA/MHz operating current
  - 500  $\mu$ A standby current
- 1 MByte of direct memory addressing capability

### Pinout

		MAX	MIN
GND	1	40	VCC
A015	2	39	A17/5

## 8-Bit Microprocessor 80C88

### Features

- Compatible with NMOS 8088
- Completely static design
  - DC to 5 MHz (80C88)
  - DC to 8 MHz (80C88-2)
- Low power operation:
  - 10 mA/MHz operating current
  - 500  $\mu$ A standby current
- Software compatible with 80C86/8086/8088
- 1 MByte of direct memory addressing capability

# STANDARD CELL CAPABILITY

## PRELIMINARY

### DLM HSC CMOS Cell Library

#### Features

- Low Power - CMOS Technology
- Single 5 Volt Supply
- Commercial-Industrial-Military Temperature Ranges
- Proven Reliable and Manufacturable Process
- CMOS and TTL Compatible Inputs and Outputs
- Large Library of SSI Primitive Cells
- 74XX Macro Function Library
- LSI Peripheral and Communication Cells
- Fully Supported by Teledesign\* Software
- Auto-Place and Auto-Route Capability
- 1.5 Micron Effective Channel Lengths
- Circuit Densities up to 15000 2-Input NAND gate equivalents
- I/O Cells Offer 10ns into 100 pF load
- Multiple Package Options
- Two Layer Metal

#### Description

The HSC STANDARD CELL LIBRARY is a proven, high performance library. The minimum feature size is 1.5 microns with effective channel lengths of 1.5 microns. The library offers predesigned and pre-characterized cells and macros for which the user prescribes the interconnections in order to develop an application specific IC.

The library has a wide assortment of SSI primitive cells, 74XX macros, and a unique Harris offering of LSI cells. The LSI macros are a family of highly integrated microprocessor peripheral and communication functions. The

designer has the choice of intermixing cells or macros from any of the three groups to optimize his design implementation. The designer chooses the most familiar design method and group of functions.

The library is supported by the Teledesign\* design automation system. The software includes schematic capture, logic simulation, auto-place, auto-route, electrical and design rule verification. The system allows the users to perform the logic entry and simulation phases of the design process on several major workstations.

#### Package Options

Plastic DIP .....	16 - 48 pins	Plastic chip carrier.....	20 - 84 pins
Ceramic DIP .....	16 - 40 pins	(leaded)	
Ceramic chip carrier .....	68 - 84 pins (leadless)	Pin grid array .....	68 - 144 pins (contact factory for current availability)

#### LSI Standard Cell Functions

CELL	DESCRIPTION		
82C37A	DMA CONTROLLER	HD4702	BAUD RATE GENERATOR
82C50A	ASYNCHRONOUS COMMUNICATION ELEMENT	HD6402	UART
82C50B	ASYNCHRONOUS COMMUNICATION ELEMENT	HD6406	UART/BRG/MODEM CONTROL
82C52	UART/BRG	HD6408	ASMA
82C54	PROGRAMMABLE INTERVAL TIMER	HD6409	MANCHESTER ENCODER/DECODER
82C55A	PARALLEL I/O	HD15530	MANCHESTER ENCODER/DECODER
82C59A	PRIORITY INTERRUPT CONTROLLER	HD15531	PROGRAMMABLE MANCHESTER ENCODER/DECODER
82C84A	CLOCK GENERATOR	1K RAM	RECONFIGURABLE STATIC RAM

82C88	BUS CONTROLLER		
82C89	BUS ARBITER		

# STANDARD CELL CAPABILITY

## Absolute Maximum Ratings

Supply Voltage.....	-0.5V to 7.0V
Input/Output Voltage .....	VSS- 0.5V
VCC+ 0.5V	
Input Diode Current.....	10mA VI < 0 or VI > VCC
Output Diode Current.....	10mA VO < 0 or VO > VCC
Power Dissipation.....	1000mW
<b>Continuous Supply Pin Current</b>	
VCC or GND .....	100mA
<b>Storage Temperature</b>	
Plastic .....	-40 to 125°C
Ceramic .....	-65 to 150°C
Continuous Current per Output .....	10mA

*CAUTION: Stresses beyond those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under RECOMMENDED OPERATING CONDITIONS is not implied. Exposure to absolute maximum rated conditions for extended periods may affect device reliability.*

Note: All applied voltages are with reference to ground (VSS).

## Recommended Operating Conditions

### D.C. Electrical Characteristics

VCC = 5 ±10% TA = Operating Temperature Range

SYMBOL	PARAMETER	MIN	MAX	UNIT	CONDITIONS
VCC TA	Operating Supply Voltage	4.5	5.5	V	
	Operating Temperature Commercial	0	70	C	
	Industrial	-40	85	C	
	Military	-55	125	C	
VIH	Input High Voltage TTL CMOS	2.2 70% VCC		V	VCC = 5.5V
VIL	Input Low Voltage TTL CMOS		0.8 30% VCC	V	VCC = 4.5V
II	Input Current Standard	-1.0	+1.0	µA	VSS = VIL = 0.0V
	Pull Up	-500	+1.0	µA	VCC = VIH = 5.5V
	Pull Down	-1.0	+500	µA	
	Pull Up*	-50	+50	µA	VI = 2.2
	Pull Down*			µA	VI = 0.8
VOH	Output Voltage	2.4		V	IOH = -6.0mA; VCC = 4.5V
VOL	Output Voltage		0.4	V	IOL = 6.0mA; VCC = 4.5V
IOZ	Output Leakage	-10.0	+10.0	µA	VSS = VOL = 0.0V VCC = VOH = 4.5V VI = VCC = 5.5V
ICCSB	Stand-By Supply (Inputs closed, Outputs open)		10	µA	II = 0; IO = 0 VI = VCC or VSS F = 1 MHz
CI**	Input Capacitance	10.0	Typical	pF	VO = VCC or VSS F = 1 MHz
CO**	Output Capacitance	10.0	Typical	pF	VO = VCC or VSS F = 1 MHz
CIO**	Input/Output Capacitance	15.0	Typical	pF	VO = VCC or VSS F = 1 MHz

\* Maximum input current for which specified VI will be maintained.

\*\*Characterized at initial design and any major design or process changes.

Maximum values may vary by package type.

# CMOS STATIC RAM MODULES

LCC RAM Module — 8K x 8 — 64K Asynchronous					Pinout
Part Number	Access Time	Power Supply Current		Replaces Pin for Pin	
		Operating	Standby		
HM-8808AS	100 ns	70 mA	250 $\mu$ A	EDH8808A	
HM-8808AB	120 ns	70 mA	250 $\mu$ A	IDT7M864	
HM-8808A	150 ns	70 mA	900 $\mu$ A	HM6264	

LCC RAM Module — 8K x 8 — 64K Asynchronous					Pinout
Part Number	Access Time	Power Supply Current		Replaces Pin for Pin	
		Operating	Standby		
HM-8808S	100 ns	70 mA	250 $\mu$ A	EDH8808	
HM-8808B	120 ns	70 mA	250 $\mu$ A	IDT8M864	
HM-8808	150 ns	70 mA	900 $\mu$ A		

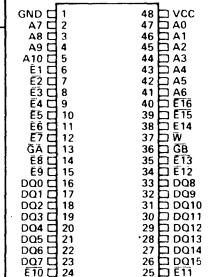

LCC RAM Module — 16K x 8 — 128K Asynchronous					Pinout
Part Number	Access Time	Power Supply Current		Replaces Pin for Pin	
		Operating	Standby		
HM-8816H	85 ns	400 mA	800 $\mu$ A	—	
HM-8816HB	70 ns	400 mA	800 $\mu$ A	—	

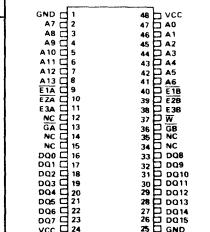

LCC RAM Module — 32768 x 8 — 256K Asynchronous					Pinout
Part Number	Access Time	Power Supply Current		Replaces Pin for Pin	
		Operating	Standby		
HM-8832	180 ns	20 mA	900 $\mu$ A	EDH8832 IDT7M856 HM62256 MSM5256 $\mu$ PD43256 TC55256	

# CMOS STATIC RAM MODULES

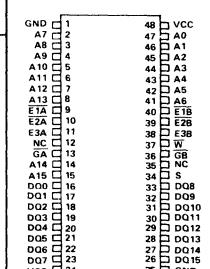

LCC RAM Module — 16384 x 16 / 32768 x 8 — 256K Synchronous				Pinout
Part Number	Access Time	Power Supply Current		Replaces Pin for Pin
		Operating	Standby	
HM-92560	150 ns	30/15 mA	500 $\mu$ A	—
HM-92560-5	250 ns	35/20 mA	3.5 mA	—

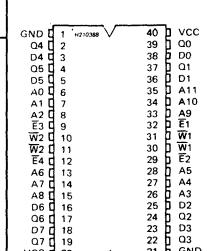

LCC Buffered Ram Module—16384 x 16 / 32768 x 8—256K Synchronous				Pinout
Part Number	Access Time	Power Supply Current		Replaces Pin for Pin
		Operating	Standby	
HM-92570	250 ns	30/15 mA	600 $\mu$ A	EDH 892570
	300 ns	35/20 mA	3.5 mA	

LCC Buffered Ram Module—65536 x 16 / 131072 x 8—1M Asynchronous				Pinout
Part Number	Access Time	Power Supply Current		Replaces Pin for Pin
		Operating	Standby	
HM-91M2	180 ns	30 mA	2 mA	EDH891M2

LCC RAM Module — 16384 x 4 / 8192 x 8 — 64K Synchronous				Pinout
Part Number	Access Time	Power Supply Current		Replaces Pin for Pin
		Operating	Standby	
HM5-6564	350 ns	56/28 mA	800 $\mu$ A	—
HM5-6564-5	450 ns	60/30 mA	5.6 mA	—

# CMOS PROMs — 4K & 16K

512 x 8 — 4K Synchronous						Pinout
Part Number	Fuse Element	Access Time	Power Supply Current		Replaces Pin for Pin	
			Operating	Standby		
HM-6641	PolySi	250 ns	10 mA/MHz	100 $\mu$ A	Harris 7641 Signetics 82S141	
512 x 8 — 4K Synchronous						Pinout
Part Number	Fuse Element	Access Time	Power Supply Current		Replaces Pin for Pin	
			Operating	Standby		
HM-6642	NiCr	250 ns	15 mA/MHz	100 $\mu$ A	Harris 7641	
HM-6642B	NiCr	100 ns	15 mA/MHz	100 $\mu$ A	Signetics 82S141 Harris 6641	
2048 x 8 — 16K Synchronous						Pinout
Part Number	Fuse Element	Access Time	Power Supply Current		Replaces Pin for Pin	
			Operating	Standby		
HM-6616B	PolySi	90 ns	15 mA/MHz	50 $\mu$ A	NMOS 2716	
HM-6616	PolySi	120 ns	15 mA/MHz	100 $\mu$ A	National 27C16 National 6716 Intersil 6716	
2048 x 8 — 16K Synchronous						Pinout
Part Number	Fuse Element	Access Time	Power Supply Current		Replaces Pin for Pin

HM-6617	NiCr	120 ns	20 mA/MHz	100 $\mu$ A	National 27C16 National 6716 Intersil 6716 Harris 6616	

# MILITARY PRODUCT REFERENCE GUIDE

Harris Semiconductor has long been a major supporter of the military market. The knowledge and expertise gained from this association is manifested in our latest military efforts; Military Drawing and 883-compliant products. This Military Product Guide gives you a complete overview of our commitment to military support. For more information on these products, please contact Harris Semiconductor or your nearest Harris sales office or representative.

## OPERATIONAL AMPLIFIERS: HIGH VOLTAGE

HA-2640, HA-2645		
Features	Applications	Pinout
<ul style="list-style-type: none"> <li>Slew rate: 1 V/<math>\mu</math>s</li> <li>Bandwidth: 4 MHz</li> <li>Input offset voltage: 4 mV</li> <li>Offset current: 5 nA</li> <li>Output voltage swing: <math>\pm</math> 35 V</li> <li>Input voltage swing: <math>\pm</math> 35 V</li> <li>Supply range: <math>\pm</math> 10 V to <math>\pm</math> 40 V</li> <li>Output overload protection</li> </ul>	<ul style="list-style-type: none"> <li>Industrial control systems</li> <li>Power supplies</li> <li>High-voltage regulators</li> <li>Resolver excitation</li> <li>Signal conditioning</li> </ul>	

## BUFFER AMPLIFIERS: VIDEO

HA-5033		
Features	Applications	Pinout
<ul style="list-style-type: none"> <li>Differential phase error: 0.1°</li> <li>Differential gain error: 0.1%</li> <li>High slew rate: 1300 V/<math>\mu</math>s</li> <li>-3dB bandwidth: 250 MHz</li> <li>High output current</li> </ul>	<ul style="list-style-type: none"> <li>Video buffers</li> <li>High frequency buffers</li> <li>High speed line drivers</li> <li>Current boosters</li> </ul>	

HA-5002		
Features	Applications	Pinout
<ul style="list-style-type: none"> <li>Voltage gain: .995</li> <li>High slew rate: 1300 V/<math>\mu</math>s</li> <li>-3dB bandwidth: 110 MHz</li> <li>High output current: 200 mA</li> <li>Pulsed output current: 400 mA</li> <li>Low supply current: 8.3 mA</li> </ul>	<ul style="list-style-type: none"> <li>High frequency buffers</li> <li>High speed line drivers</li> <li>High power current boosters</li> <li>High power current sources</li> </ul>	

## OPERATIONAL AMPLIFIERS: ADDRESSABLE

### HA-2400, HA-2404, HA-2405, HA-2406

Features	Applications	Pinout
<ul style="list-style-type: none"> <li>• Four channels addressable</li> <li>• High slew rate: 30 V/<math>\mu</math>s</li> <li>• Wide gain bandwidth product: 40 MHz</li> <li>• High gain: 150K</li> <li>• TTL compatible</li> </ul>	<ul style="list-style-type: none"> <li>• Signal selection/multiplexing</li> <li>• Variable gain stages</li> <li>• Oscillators</li> <li>• Filters</li> <li>• Comparators</li> <li>• Integrators</li> </ul>	

## COMPARATORS

### HA-4900, HA-4902, HA-4905

Features	Applications	Pinout
<ul style="list-style-type: none"> <li>• Fast response time: 130 ns</li> <li>• Low offset voltage: 2 mV</li> <li>• Low offset current: 10 nA</li> <li>• Single or dual supply</li> <li>• Analog and logic supplies separated for easier interface and noise immunity</li> </ul>	<ul style="list-style-type: none"> <li>• Threshold detectors</li> <li>• Zero crossing detectors</li> <li>• Window detectors</li> <li>• Interface</li> <li>• Oscillators</li> </ul>	

---

## **NEW LINEAR PRODUCTS: COMING SOON**

---

<b>Video Op Amp HA-2544</b>
<b>Features</b>
<ul style="list-style-type: none"><li>• .1 dB diff. gain/.1° diff. phase</li><li>• .2 dB at 5 MHz gain tolerance</li><li>• 33 MHz unity gain bandwidth</li><li>• 10 mA supply current</li></ul>

<b>Precision Quad Op Amps HA-5134</b>
<b>Features</b>
<ul style="list-style-type: none"><li>• 25 <math>\mu</math>V offset voltage</li><li>• 5 <math>\mu</math>V/<math>^{\circ}</math>C offset drift</li><li>• 120 dB channel separation</li><li>• 4 MHz unity gain bandwidth</li></ul>

<b>Monolithic Power Supply HV-1205</b>
<b>Features</b>
<ul style="list-style-type: none"><li>• Direct 120/240 VAC to 5 VDC</li><li>• 50 mA at &lt; 50 mV p-p ripple</li><li>• Switching pre-regulator</li><li>• Uses Harris'high voltage process</li></ul>

HS-245 Transmitter

HS-246/248/249 Receivers

# SECURE DATA COMMUNICATIONS

CYPHER-I™ CMOS DATA ENCRYPTION DEVICE HS-3447	Pinout
Features	
<ul style="list-style-type: none"> <li>• Endorsed by National Security Agency for protecting unclassified national security related information (UNSR)</li> <li>• Per DoD drawing ON304455</li> <li>• Alternative to WD 2001/2002 and MC6859 NMOS devices</li> <li>• Uses single 5V power supply</li> <li>• Operating range -55°C to +125°C</li> <li>• Lower power operation 250 mW at 10 MHz</li> <li>• Maximum transfer rate: 20 MHz at 7 Volts 10 MHz at 5 Volts 20 MHz at 5 Volts (-55°C to +85°C)</li> <li>• Encrypts/decrypts via serial data stream</li> <li>• Available to Class B and Class S equiv. screening</li> <li>• Inputs TTL compatible</li> <li>• Key variable stored on chip is not externally accessible</li> <li>• Available in special configurations</li> </ul>	

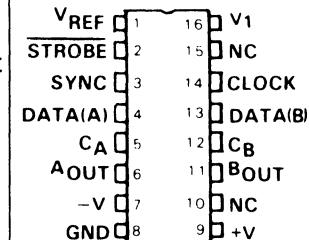

# SPECIALIZED PRODUCTS

## ARINC 429 Bus Interface Line Driver Circuit HS-3182

### Features

- Inputs TTL and CMOS compatible
- Adjustable rise and fall times via two external capacitors
- Programmable output differential range via voltage reference input ( $V_{REF}$ )
- Outputs are inhibited (0 V) if data (A) and data (B) inputs are both in the "logic one" state
- Can operate up to a 100-Kbit data rate
- Output short circuit proof and contains overvoltage protection
- Data "A" and Data "B" signals are "AND'D" with clock and sync signals
- Full military temperature range

### Pinout

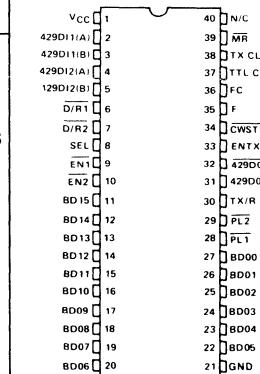

## ARINC 429 Bus Interface Circuit HS-3282

### Features

- ARINC specification 429 compatible
- Data rates of 100 Kbits or 12.5 Kbits
- Separate receiver and transmitter section
- Dual and independent receivers, connecting directly to ARINC bus
- Serial to parallel receiver data conversion
- Parallel to serial transmitter data conversion
- Word lengths of 25 or 32 bits
- Parity status of received data
- Generate parity of transmitter data
- Automatic word gap timer
- Single 5 V supply
- Low power dissipation
- Full military temperature range

### Pinout

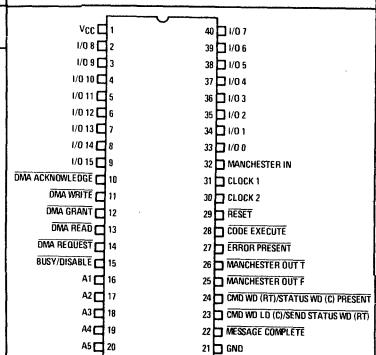

## MIL-STD-1553B Bus Interface Circuit HS-3273

### Features

- MIL-STD-1553B compatible
- Up to 5 MHz data rate for non-MIL-STD-1553B applications
- Parallel to serial transmitter data conversion
- 8/16 bits host I/O interface
- Error interception and recognition
- DMA capability
- Single 5 V power supply
- Full military temperature range

### Pinout

# RAD-HARD SEMICUSTOM CIRCUIT TECHNOLOGY

---

## HS-CXXXRH Cell Library

### Features

- Recommended as the most efficient library for customer circuits implemented in terms of 74 LS or 4000 Series functions
- Over 80 logic functions in cell library
- Soft-coded macros
- Individual data sheets
- 2.5-micron CMOS technology
- 40 MHz clock frequency
- TTL/CMOS compatible
- Full military temperature ranges
- Multiple package options
- Processed to either Class B or Class S equivalent flow
- Guaranteed rad-hard to  $> 2 \times 10^5$  rads (Si)
- Upset:  $\geq 1 \times 10^9$  rads (Si)/sec
- Functional after  $1 \times 10^6$  rads (Si) total dose

## HS-DXXXRH High-Density CMOS Standard Cell Library

### Features

- Recommended as the most efficient library for customer circuits implemented in terms of logic primitives, i.e., gates and flip flops
- Over 100 logic functions in the HD cell library
- 2.5-micron silicon gate CMOS technology
- 3 ns typical gate delay
- Full military temperature ranges
- Utilizes analog or memory drop in functions
- Multiple package options
- 5000 gate, 120 I/O chip complexity
- Total dose  $1 \times 10^5$  rads (Si)
- Latch-up free

## CMOS Gate Array Family

### HS-G0600RH, HS-G1200RH, HS-G2500RH

# GaAs PRODUCTS

Products And Services	GaAs FET Products
<p>Gallium Arsenide-based standard and custom products are available from Harris Microwave Semiconductor (HMS), located in Milpitas, CA.</p> <p>Standard products include:</p> <ol style="list-style-type: none"> <li>1. GaAs Field Effect Transistors (GaAs FETs) for RF and microwave applications.</li> <li>2. GaAs Digital Integrated Circuits for high speed signal processing.</li> <li>3. GaAs Monolithic Microwave Integrated Circuits (MMICs) for broadband amplification of RF and microwave signals in receive, transmit, and IF stage applications.</li> </ol> <p>Custom design and fabrication services are available whereby customers can design or specify specialized digital, MMIC or FET products for manufacture at HMS. Currently in development is a GaAs cell library of standard logic elements and I/O circuits for use with the GaAs DIGI-1 and DIGI-2 processes. Contact a Harris Design Center for current status and details.</p> <p>Analysis, testing, packaging, and screening options are available for all standard and custom products.</p>	<p>Microwave GaAs FETs from Harris Microwave Semiconductor have been designed and built for performance, reliability and consistency. To achieve these objectives, Harris employs extremely low defect gallium arsenide substrates of its own manufacture, ion implantation, a Ti/Pt/Au metallization system, large cross-section "T" gate structure and integral dielectric scratch and short circuit protection.</p> <p>Each wafer undergoes an extensive reliability and performance qualification procedure exceeding the element evaluation requirements of MIL-STD-883C, Method 5008, Class B. Each die is DC tested and visually inspected prior to packaging and shipment. To accommodate specialized requirements, Harris can provide selections tailored to meet these needs. High-reliability screening and qualification testing are available on all Harris GaAs FET Products.</p>

## Component Ordering Information

### Harris Part Number

### 80C86 Family Product Number

\* Alpha suffix parts are defined in individual data sheets.

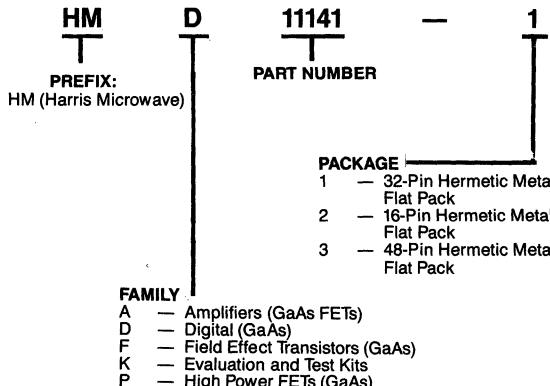

### Ordering Information

Harris products are designated by "Product Code". When ordering, please refer to products by the full code. Harris products will always begin with H, except in the case of Chip products or products which are branded with industry standard part numbers, such as 80C86. Specific device numbers will always be isolated by hyphens. Industry standard part numbers should be ordered as stated in this schedule.

## Component Ordering Information
