This catalog provides information as of January, 2005.  
Specifications and information herein are subject to change without notice.

# Yes, we have

## SANYO has the Technology and Devices Required by DVD-ROM/R/RW and CD-ROM/R/RW Products

SANYO has developed DVD-Dual system-on-chip ICs that integrate DVD-ROM decoder and DVD-R/RW encoder on the same chip based on SANYO technologies refined through extensive experience developing CD-ROM and CD-R/RW ICs.

SANYO is committed to early support of the latest recording technologies, such as its **BURN-Proof**® and DVD-R/RW technologies, to assist our customers development of their optical disc products.

■ Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.

■ SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.

■ Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or

equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

■ SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.

■ In the event that any or all SANYO products(including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.

■ No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written permission of SANYO Electric Co., Ltd.

■ Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO product that you intend to use.

■ Information (including circuit diagrams and circuit parameters) herein is for example only ; it is not guaranteed for volume production. SANYO believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.

### Notes on Package Types and Naming

The package names used in this documentation are designed to indicate rough classification of the packages used, and do not necessarily indicate the formal name of each individual package. Refer to the delivery specifications document for the particular product for the package dimensions figure and the formal name of the package.

A separate manufacturing license based on the DVD standards is required when creating a new DVD system product.

Flash products are licensed from Silicon Storage Technology, Inc., (USA), and manufactured and sold by SANYO Electric Co., Ltd.

**HD-BURN**®, **BURN-Proof**®, and **BURN-Proof**® are trademarks or registered trademarks of SANYO Electric Co., Ltd.  
**BURN-Proof**® stands for Proof against Buffer UnderRun Error, not for proof against burning.

Innovative spirit giving birth to new trends

# Chip Set Solutions: Collections of SANYO's Perfected Technologies

Optical disc drives have flourished with the growth of multimedia. This explosive growth has brought with it demand for increased performance, new functionality, and greater ease of use. SANYO responds with chip set solutions consisting of all the necessary devices based on the company's unique technology.

**Single-Chip Solutions that Support DVD-ROM and DVD-R/RW** P.06

### DVD-Dual System ICs

SANYO provides an extensive lineup of ICs that include SANYO DSP cores and servo firmware to flexibly support DVD, CD-ROM, and CD-R/RW media.

DVD-Dual ICs  
 DVD±R/RW: 12× write speed, DVD-ROM 16× playback  
 CD-R/RW/ROM: 48×/32×/48× speeds

**LC897491** New product P.08

DVD±R/RW: 16× write speed, 16× DVD-ROM playback  
 CD-R/RW/ROM: 52×/32×/52× speeds

**LC897492** Under development P.08

**Includes SANYO's BURN-Proof Technology High-Speed Playback and Write** P.12

### CD-R/RW Encoder & Decoder

All necessary functions for CD-R/RW drive integrated on a single chip to achieve the system simplification

- Support for high-speed reads and writes
- Broad host interface support
- Built-in intelligent functions

Complete compatibility with ATAPI standards  
 52× playback and 52× writes

**LC898095** P.12

**Extensive Lineup to Support User Needs** P.28

### Motor Driver ICs

Offering custom-specification products tailored to users' needs

- High-output, high-gain actuator drivers
- Loading motor drivers using low-saturation vertical PNP
- Spindle motor drivers providing precise rotation
- Spindle and actuator drivers integrated on a single chip

**Large-Capacity On-Chip Flash Memory** P.24

### Flash Microcontrollers

The on-board programming and software data storage functions give these microcontrollers a degree of flexibility that is unthinkable with mask ROM microcontrollers.

# SANYO Technologies Underpinning DVD-ROM/R/RW and CD-ROM/R/RW Drive Development

Functionality and performance of optical disc drives are improved by acceleration technology, recording control technology by the write strategy circuit and ATIP circuits, and by digital servo technology. Integration levels are increasing even further due to even higher precision fabrication technologies, and continuing research for the development of optical disc drives including DVDs, such as enhancing the variety of different host interface functions.

## Constituent Technologies

### Single-Chip Solutions Moving Optical Disc Drives Forward

Based upon the CD-ROM decoders achieved by the unique advanced technology, SANYO has developed ICs supporting a full complement of host interfaces. At the same time, it developed chipset solutions combining such functions as CD decoders, servo ICs, and the encoders required for writable versions of CD/CD-ROM technology.

Now that the industry is shifting to DVD-ROM, we continue to answer the need for streamlined optical disc drive designs with single-chip solutions building upon these core optical disc drive technologies and using precision fabrication of such ASIC macros as memory, analog-to-digital converters, digital-to-analog converters, and phased locked loops.

### Boosting the Functionality and Performance of Optical Disc Drives

#### Higher rotational speeds

- SANYO digital signal processing technology now offers realtime error correction for playback speeds high.
- SANYO servo technology provides precision control over disc speed.

#### Recording control

- SANYO has boosted the performance of the ATIP servo, write strategy circuit, and other components of the recording control system.

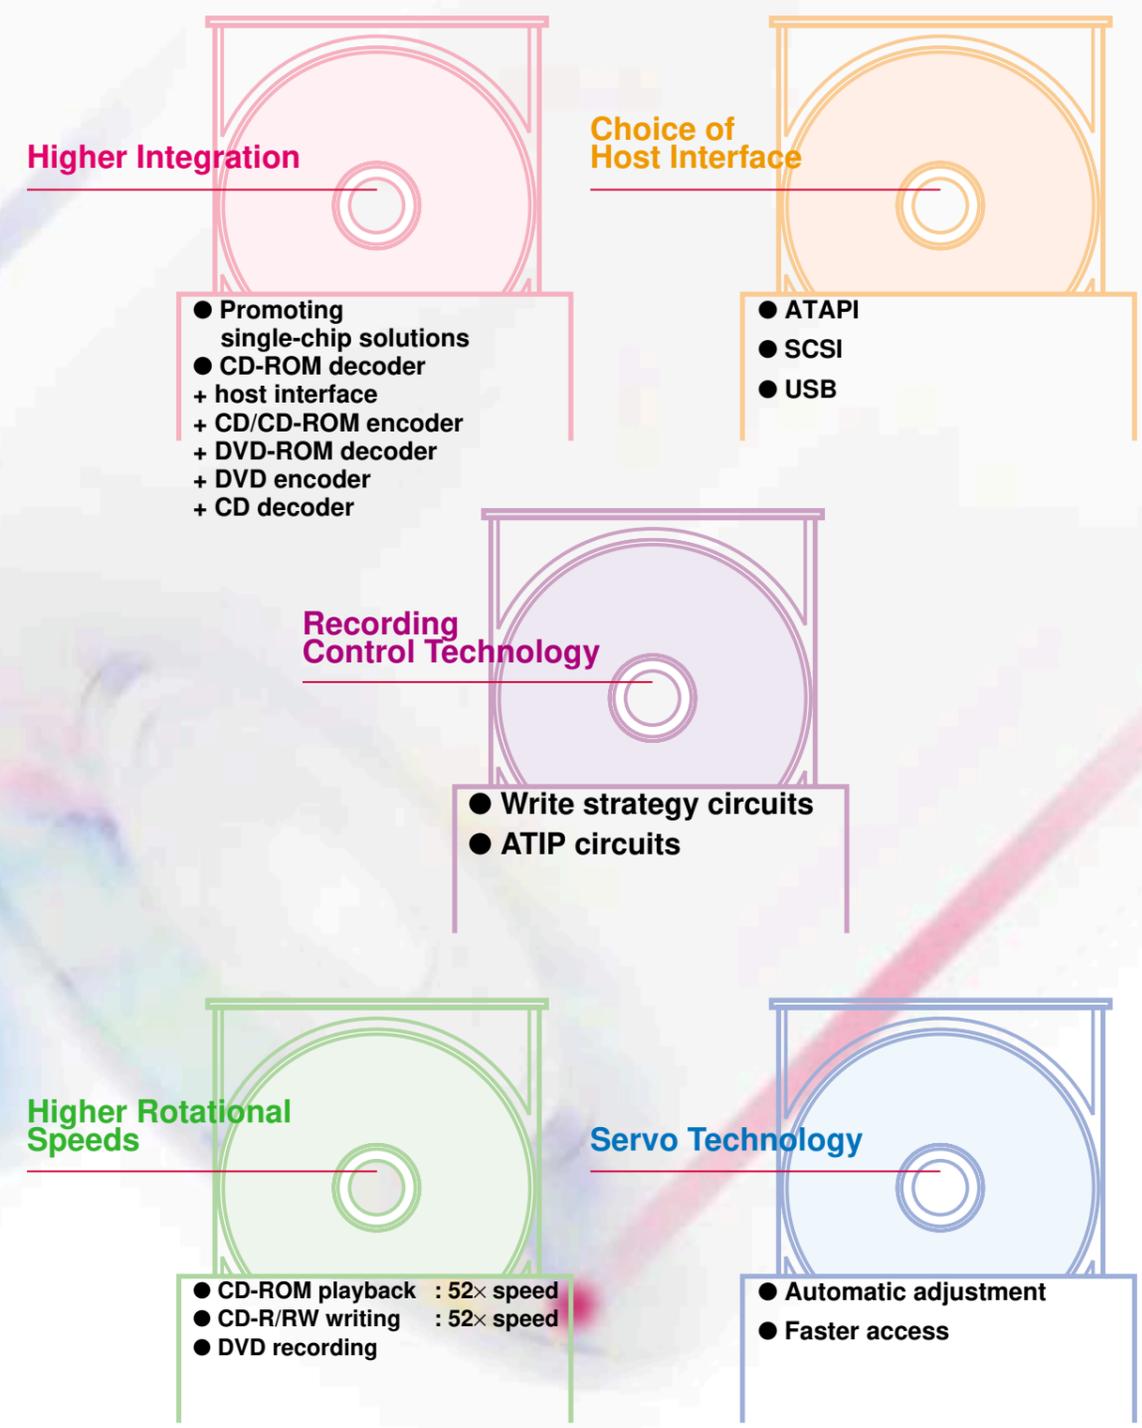

#### Host interfaces

- SANYO is promoting improved transfer speeds at the same time as supporting diversifying host interfaces.

#### Large-capacity on-chip flash memory

- Includes an even larger flash memory system to support the increasingly complex firmware required for combo drive.

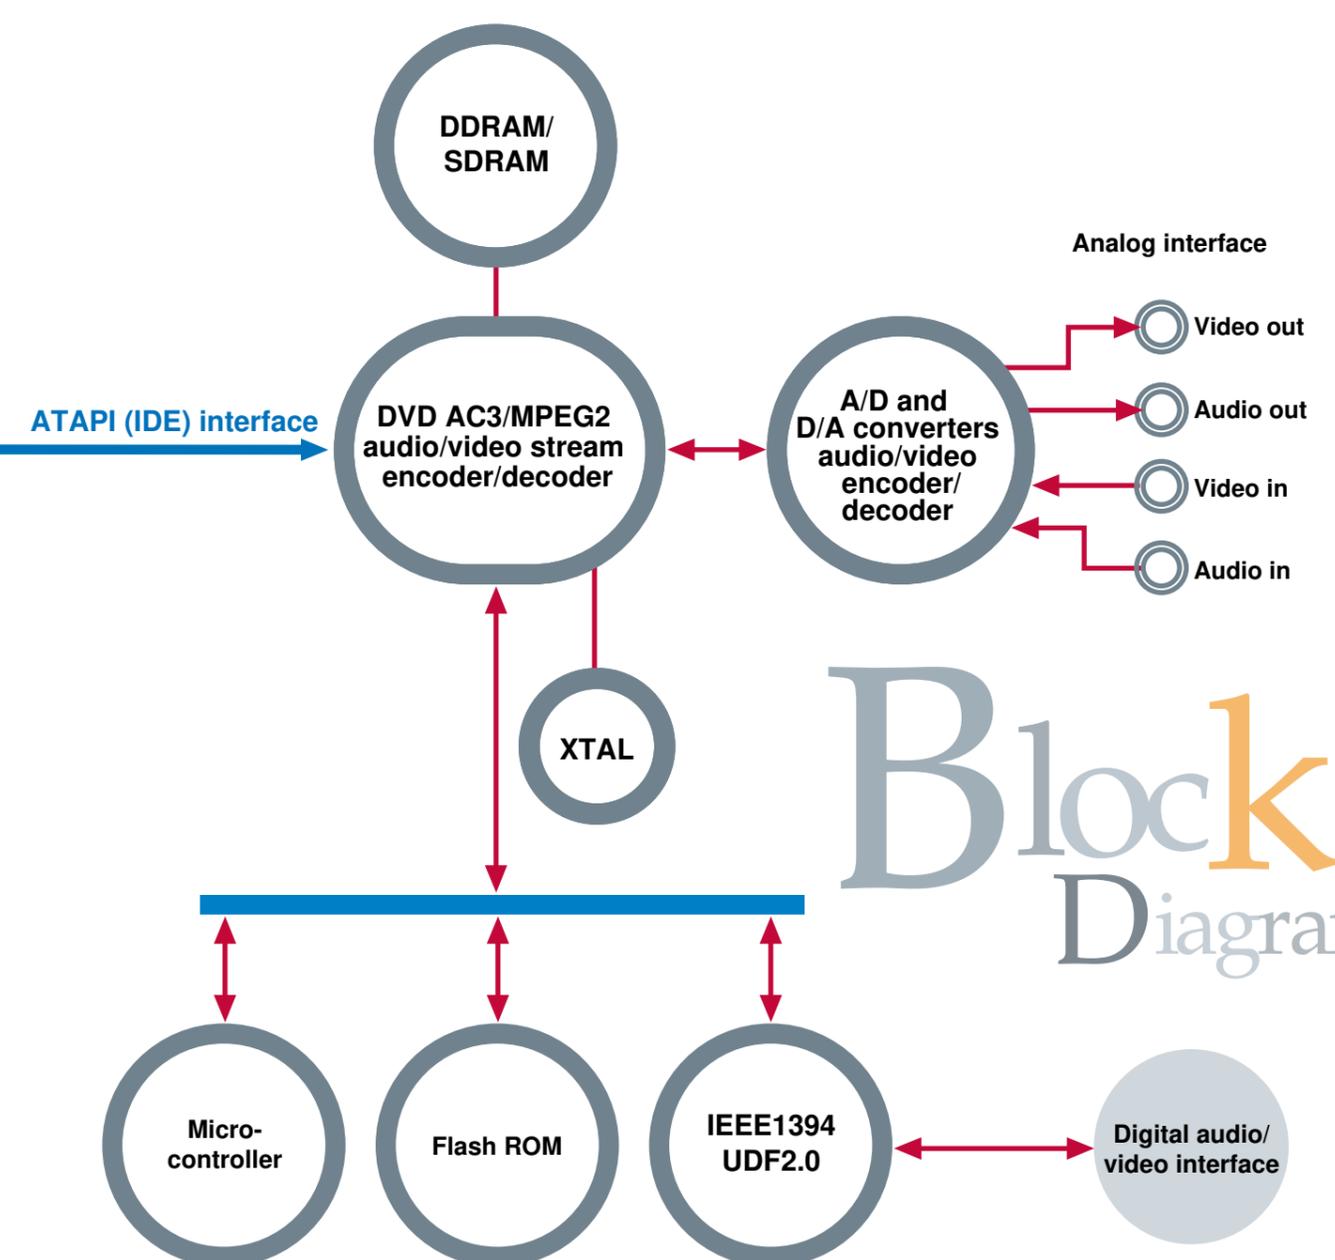

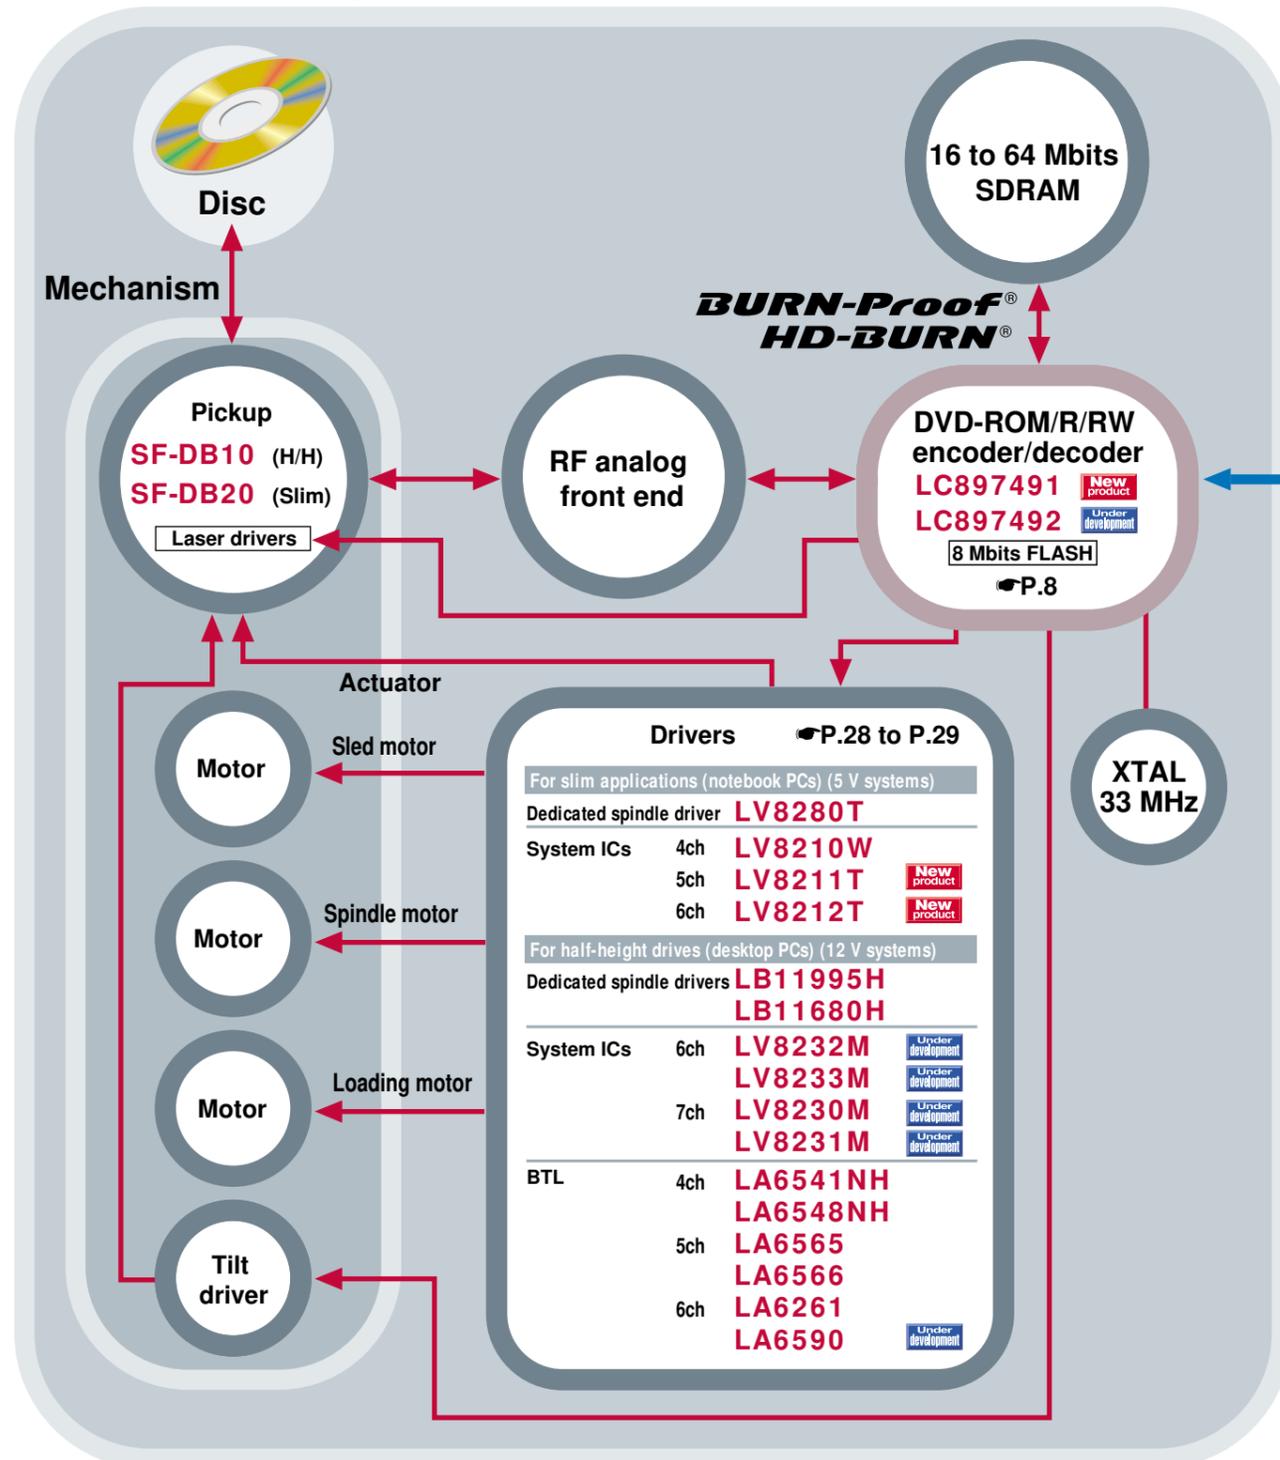

SANYO is applying these advances to enhancing the functionality and performance of DVD-ROM drives as well.

# DVD-Dual System Chipsets

SANYO has now developed DVD-Dual ICs that integrate on a single chip both SANYO's unique CD technologies refined through extensive experience with dedicated CD-ROM and CD-R/RW ICs as well as DVD-ROM decoder and DVD-R/RW encoder functions. These ICs support our customers' optical disc drive development efforts.

## DVD-ROM/R/RW Drive System

Flash products are licensed from Silicon Storage Technology, Inc., (USA), and manufactured and sold by SANYO Electric Co., Ltd.

HD-BURN® and BURN-Proof® are registered trademarks of SANYO Electric Co., Ltd. BURN-Proof® stands for Proof against Buffer UnderRun Error, not for proof against burning.

# Single-Chip DVD-Dual System ICs that Support ATAPI (IDE)

Demand from the rapidly expanding DVD market for a shift to DVD-Dual, which promises more stable operation and higher recording speeds, is increasing. To respond to these needs, SANYO has now developed the LC897491 12x-speed DVD-Dual drive signal-processing IC. SANYO is also now developing the LC897492, which will feature 16x speed. These products incorporate 8 Mbits of flash memory, and require no external flash memory. Since either of these products in conjunction with an RF amplifier can implement all of the signal processing unique to DVD-Dual drives with just two chips, they can support significant simplification of end product designs.

DVD-Dual System ICs that provide 8 Mbits of built-in flash memory and support DVD-ROM/±R/RW and CD-R/RW

**LC897491** **BURN-Proof®** **HD-BURN®** **New product**

**LC897492** **BURN-Proof®** **HD-BURN®** **Under development**

### DVD Record and Playback Functions

- DVD-ROM playback at up to 16x speed
- DVD±R/RW recording: Up to 12x speed (LC897491)  
Up to 16x speed (LC897492)
- DVD-ROM clock generation PLL (read channel)
- DVD-ROM playback ECC/EDC decoder and bit descrambler
- DVD±R/RW wobble and LPP recording clock generation PLL
- DVD±R/RW ECC/EDC encoder and bit scrambler
- DVD-R/RW LPP decoder (prerecorded data read)
- DVD+R/RW ADIP decoder (prerecorded data read)
- DVD±R/RW header (ID, CPR\_MAI) generation and zero padding functions
- Supports the T/40 write strategy resolution
- 2K/32K/0 link support (DVD-R/RW)
- Lossless linking support (DVD+R/RW)
- Blank area detection function (unrecorded area detection)
- Recording can be started from arbitrary positions in 1 clock cycle units referenced to LPP/data.
- Encoded data arbitrary position setting function in 1 clock cycle units referenced to LPP/data.
- BCA read
- DVD multiblock transfer and reception functions
- CSS support, bus scrambler, DVD-MAC (used by CPRM)
- 2x-speed DVD-ROM reading

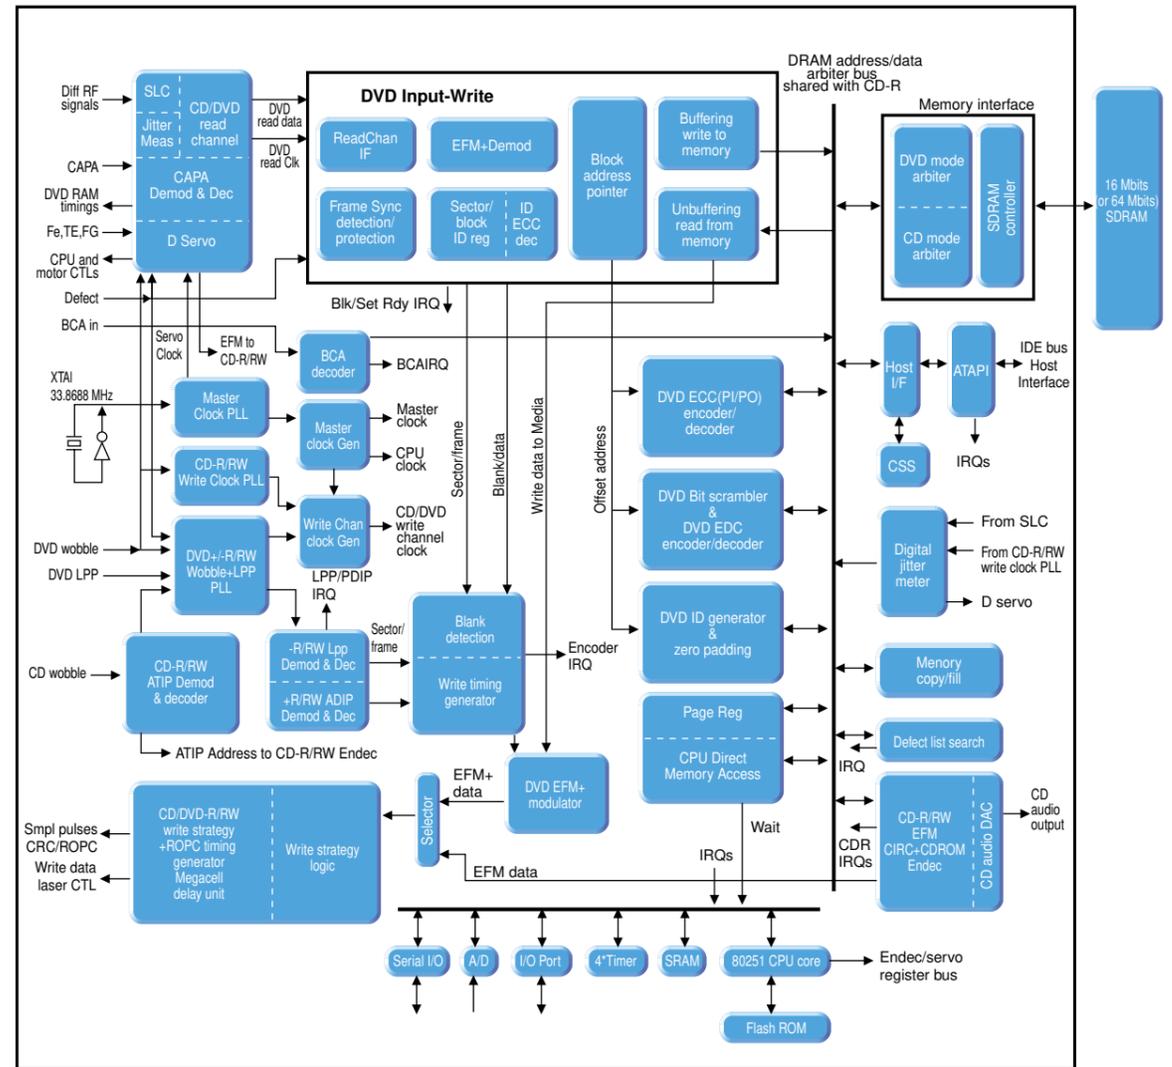

### CD Record and Playback Functions

- CD-R/RW/ROM: 48x/32x/48x speeds (LC897491)  
52x/32x/52x speeds (LC897492)
- CD-ROM data and subcode data encoding and decoding
- BURN-Proof® technology
- CD analog audio output and digital audio output interfaces
- Batch transfer and multiblock transfer and reception functions
- Supports the T/32 write strategy resolution
- Support for CD-R high-density recording technology (HD-BURN®)

### Shared Functions

- ATAP PIO: 16.6 MB/s, multiword DMA: 16.6 MB/s, Ultra DMA: 33 MB/s and 66 MB/s
- Up to 128 Mbits of external SDRAM
- Internal flash memory: 8 Mbits
- On-chip CPU
- Crystal oscillator: 33.8688 MHz
- Package: LQFP256
- Power supply: I/O: 3.3 V, internal: 2.5 V

LC897491/LC897492 Block Diagram

BlockDiagram

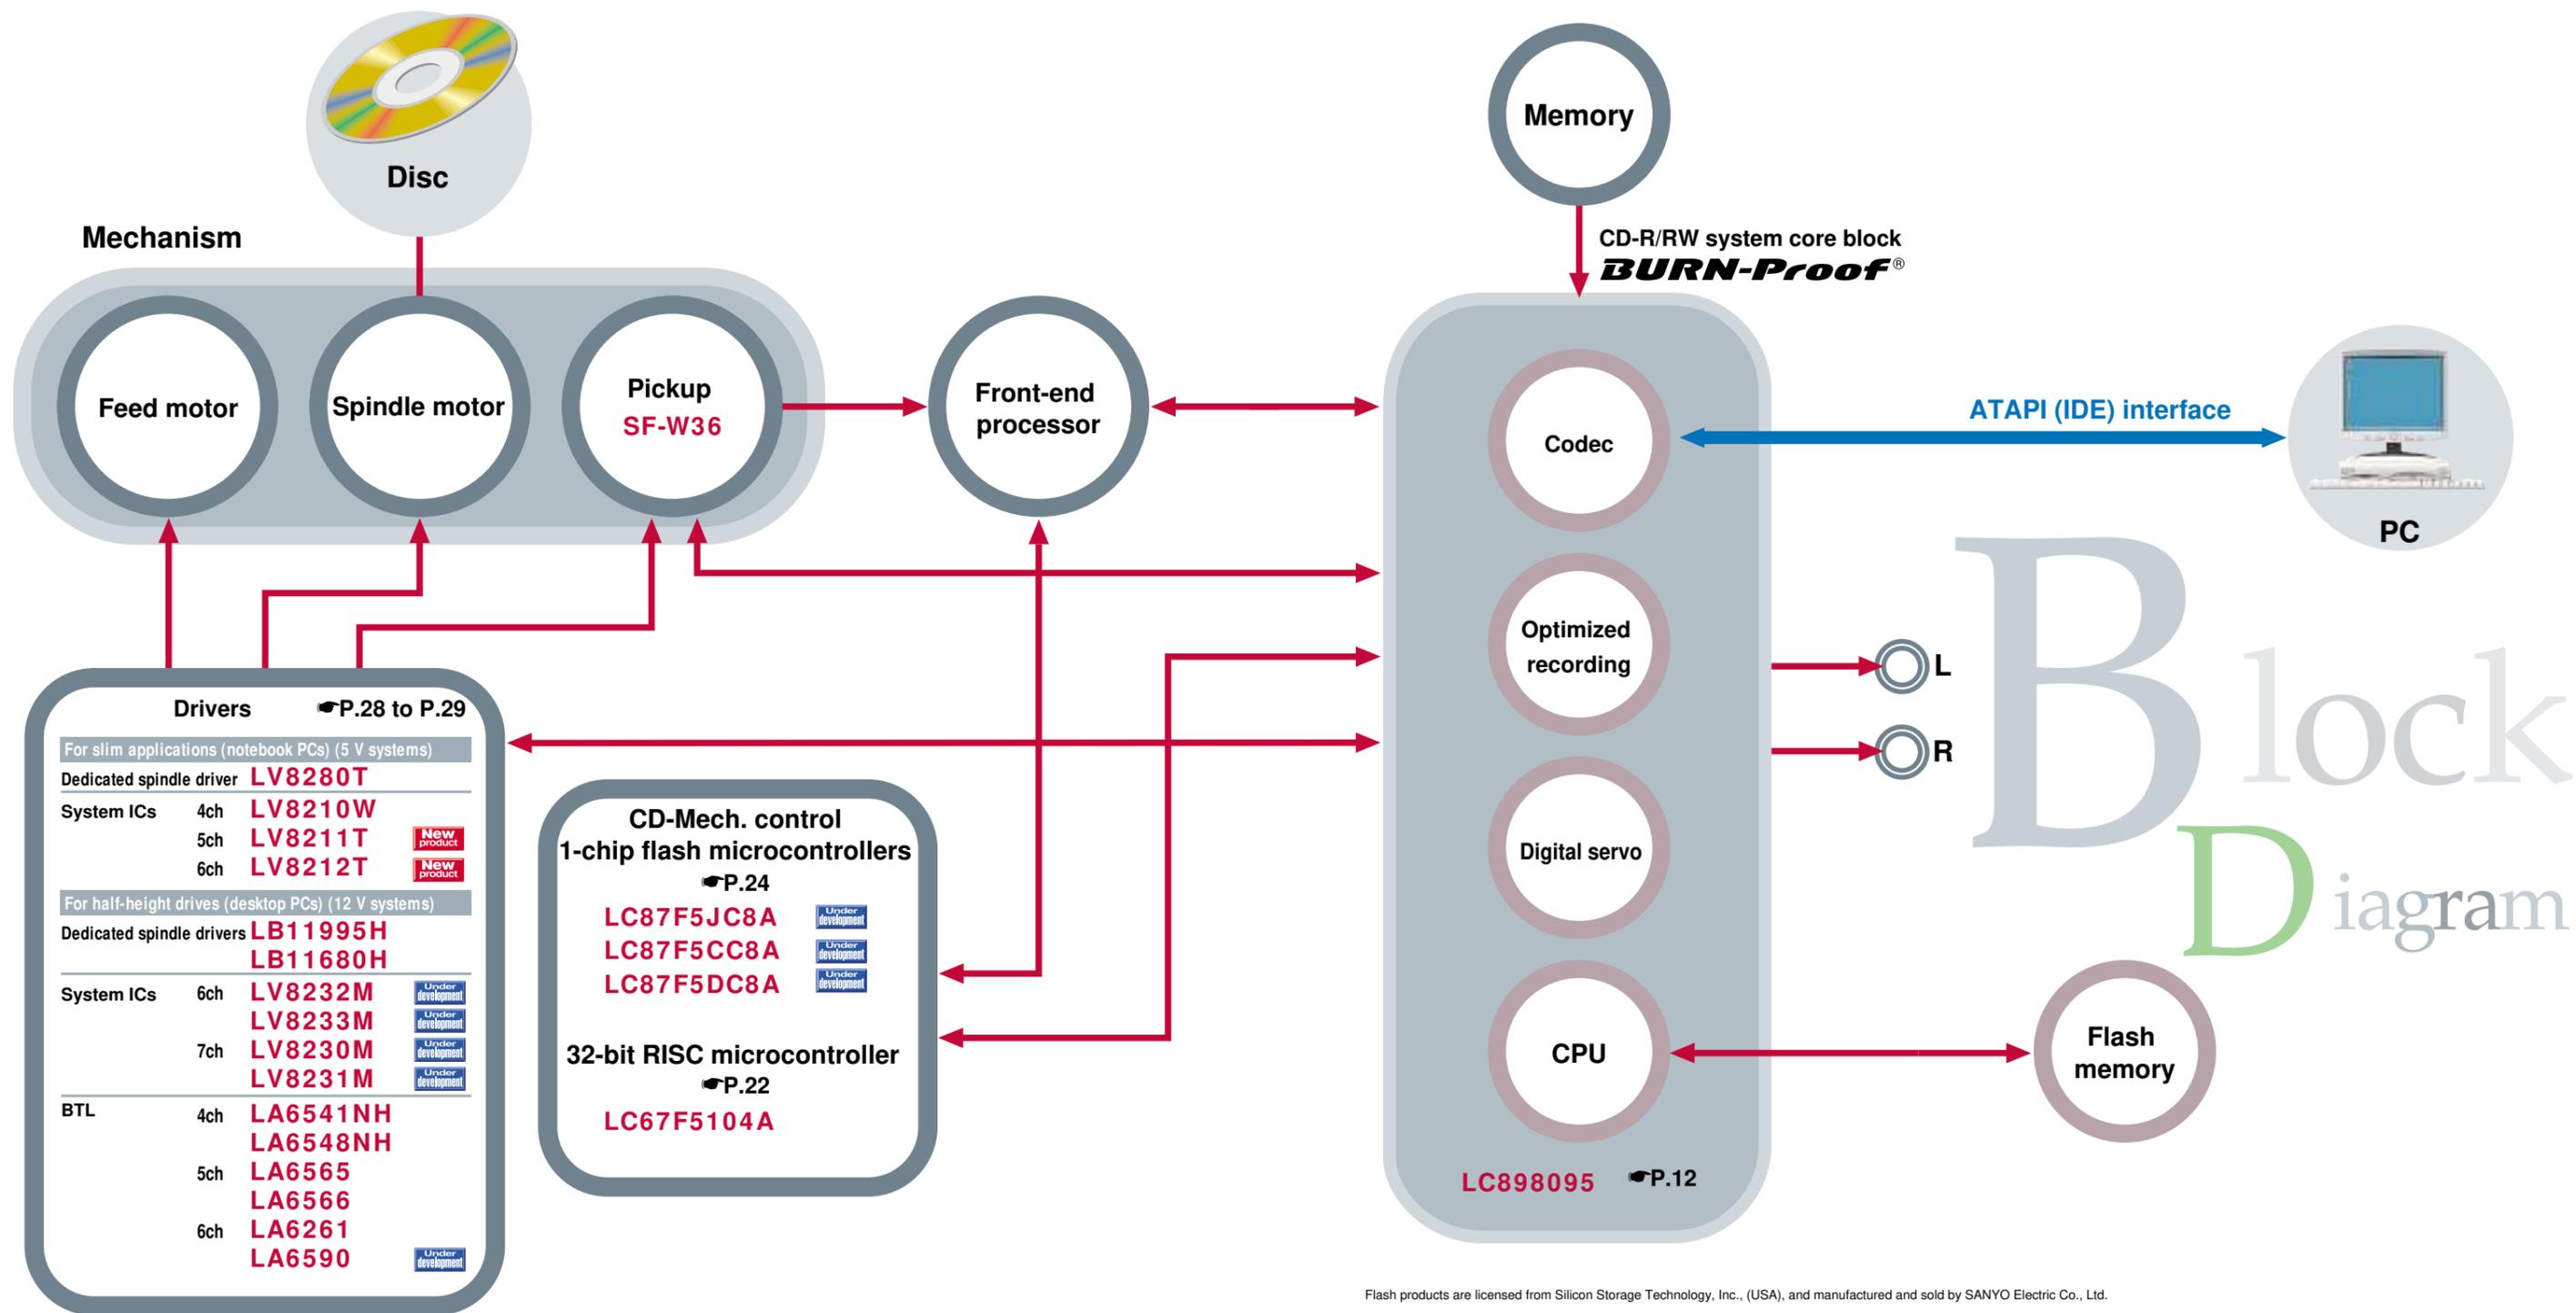

HD-BURN® and BURN-Proof® are registered trademarks of SANYO Electric Co., Ltd. BURN-Proof® stands for Proof against Buffer UnderRun Error, not for proof against burning.

SANYO responds to diversifying product concepts for optical disc drives.

# CD-R/RW System Chipsets

Chip sets that achieve significant simplifications in the recording system by providing ATIP decoding and CLV servo functions and a write strategy circuit.

Flash products are licensed from Silicon Storage Technology, Inc., (USA), and manufactured and sold by SANYO Electric Co., Ltd.

**BURN-Proof**® is a registered trademark of SANYO Electric Co., Ltd.  
**BURN-Proof**® stands for Proof against Buffer UnderRun Error, not for proof against burning.

# 52× Playback, 52× Write CD-R/RW Encoder and Decoder ICs

ICs that achieve significant simplifications in CD-R/RW drives by integrating all the functions required for write operations, including ATIP servo functions, digital servo functions, an ATAPI interface circuit, on a single chip.

ATAPI Interface 52× Playback,  
52× Write CD-R/RW Encoder and Decoder IC

## LC898095

BURN-Proof®

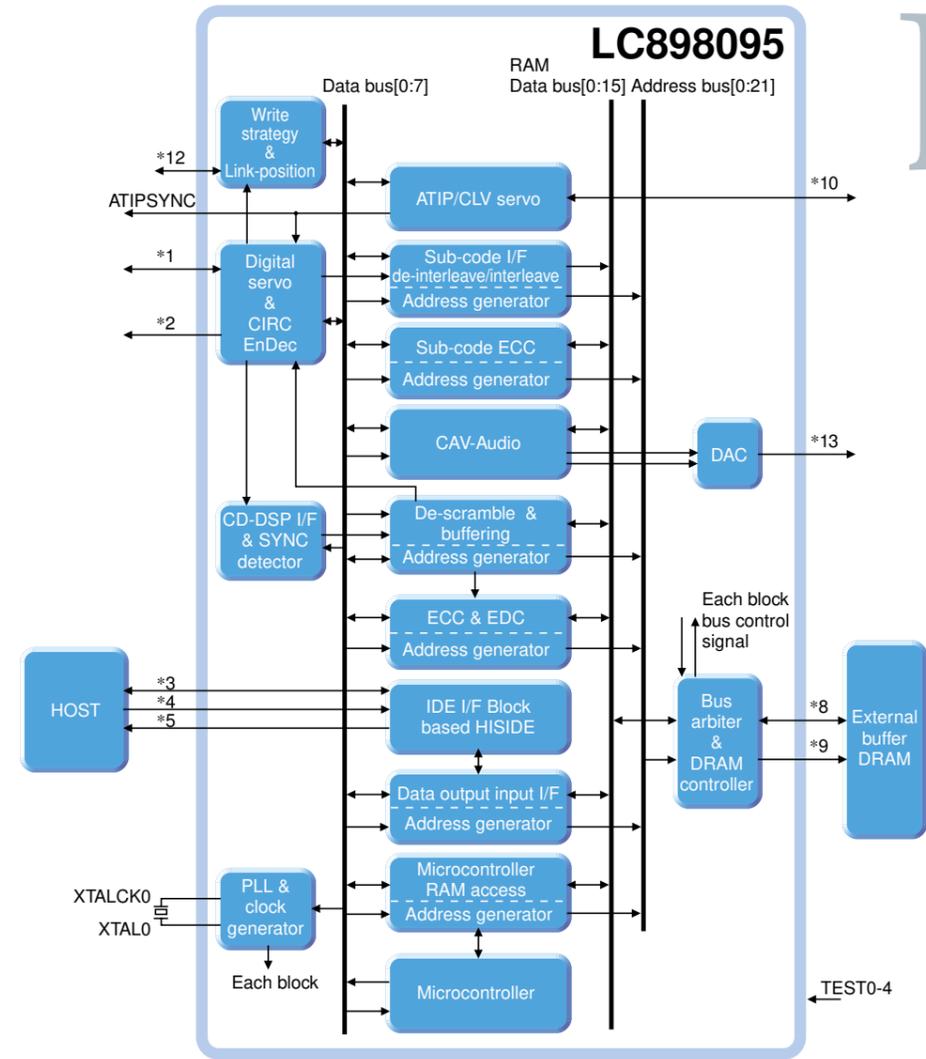

### Functions

- CD-ROM decoding and encoding functions
- CD decoding and encoding functions
- Pit and wobble CLV servo functions
- ATAPI interface (includes the register block)
- CAV-audio function
- CD-TEXT support
- Built-in CPU(80251)
- Subcode decoding and encoding functions
- ATIP demodulating/decoding functions
- Write strategy function (CD-R/RW)
- BURN-Proof® technology
- CAV recording functions
- Buffer RAM mapping function
- Package: LQFP256

### Features

- ECC and EDC correction/addition for CD-ROM data
- Decoding and encoding for subcode data
- Servo control implemented in a digital servo system
- CLV/CAV servo control using ATIP data
- ATIP decoding function and CRC check function
- A random EFM signal can be output for PCA use.
- A high-precision write strategy signal can be output (supports 52×-speed CD-R and 24×-speed CD-RW)
- Buffer RAM can be accessed by the built-in microcontroller through the LC898095.
- Built-in ATAPI interface (with Ultra DMA modes 0, 1, and 2 support)
- Supports 52×-speed decoding and 52×-speed encoding (Operating frequency 33.8688 MHz)
- Transfer rates: Up to 16.6 MB/s when PIO mode used (with IORDY), up to 33 MB/s when Ultra DMA used (with DMARQ).
- CD main channel, C2 flag and subcode areas within external buffer RAM can arbitrarily be set by the user.
- Batch transfer function (Function which sends CD main channel, C2 flag, subcode, etc. all at once.)
- Multiblock transfer function (Function which automatically sends multiple blocks at once.)
- The flash ROM access time can be changed with configuration settings.
- Register-based CPU that features registers that can be accessed in byte, word, and double-word units.
- Source code compatible with the Intel 8051, full compatibility with the Intel 80251.
- High-speed instruction fetch using 16-bit fetch, page mode fetch, and prefetch operations.
- General-purpose 7-input 8-bit A/D converter and 6-input 8-bit D/A converter
- General-purpose I/O ports (24 ports) and LED drive ports (2 ports)
- Provides a pin for command connection with the AFE (This pin is also used for general-purpose serial data transfer.)
- Supports stepping motors.

LC898095

BURN-Proof® is a registered trademark of SANYO Electric Co., Ltd.  
BURN-Proof® stands for Proof against Buffer UnderRun Error, not for proof against burning.

## BURN-Proof®

SANYO, the world-leader in high-speed recording CD-R/RW products, has developed a revolutionary technology that solves the problem of buffer underrun errors during CD-R/RW recording. This technology eliminates the previously intractable problem of write failures due to buffer underrun errors, and enables CD-R writes to be executed with complete dependability.

Industry standardization of this technology is moving ahead, and it will be coming into wide use under the name BURN (Buffer Under Run)-Proof.

In order to create a CD-DA/CD-ROM compatible disc, the CD-R must record receive data continuously on the disc. If data transfer is interrupted for some reason, a buffer underrun error will occur, and the resulting disc will not be readable by a CD-ROM drive.

### Features of BURN-Proof Function

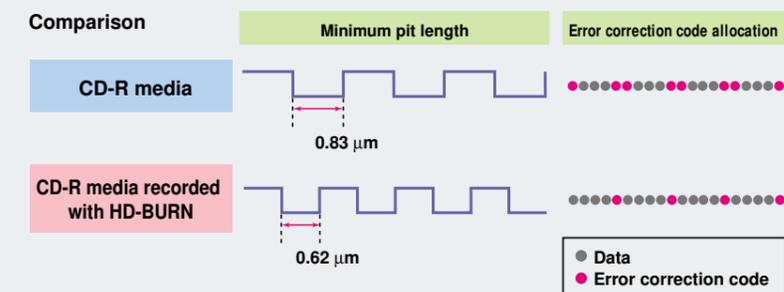

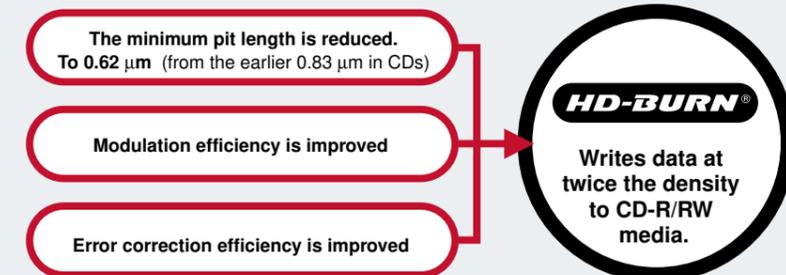

1. A recording error does not occur, and data is guaranteed, in the event of a buffer underrun error
2. CD-R recording is easily possible regardless of the personal computer environment
3. Multitasking can be carried out during CD-R/RW recording
4. Failures of disc direct back-up from a CD-ROM drive to a CD-RW drive are greatly reduced

HD-BURN®, BPreC®, and BURN-Proof® are registered trademarks of SANYO Electric Co., Ltd.  
BURN-Proof® stands for Proof against Buffer UnderRun Error, not for proof against burning.

## HD-BURN®

### High-Density CD-R Recording Technology

HD-BURN is a high-density recording technology that allows 1.4 GB, twice the normal capacity, to be stored on a single CD-R media. Discs created with the HD-BURN technology are highly compatible with existing DVD player technology, and can be read on most players simply by updating the firmware. HD-BURN technology, which responds to needs for greater flexibility and lower priced data recording, show great promise as a supplementary function for CD-R and DVD recording systems.

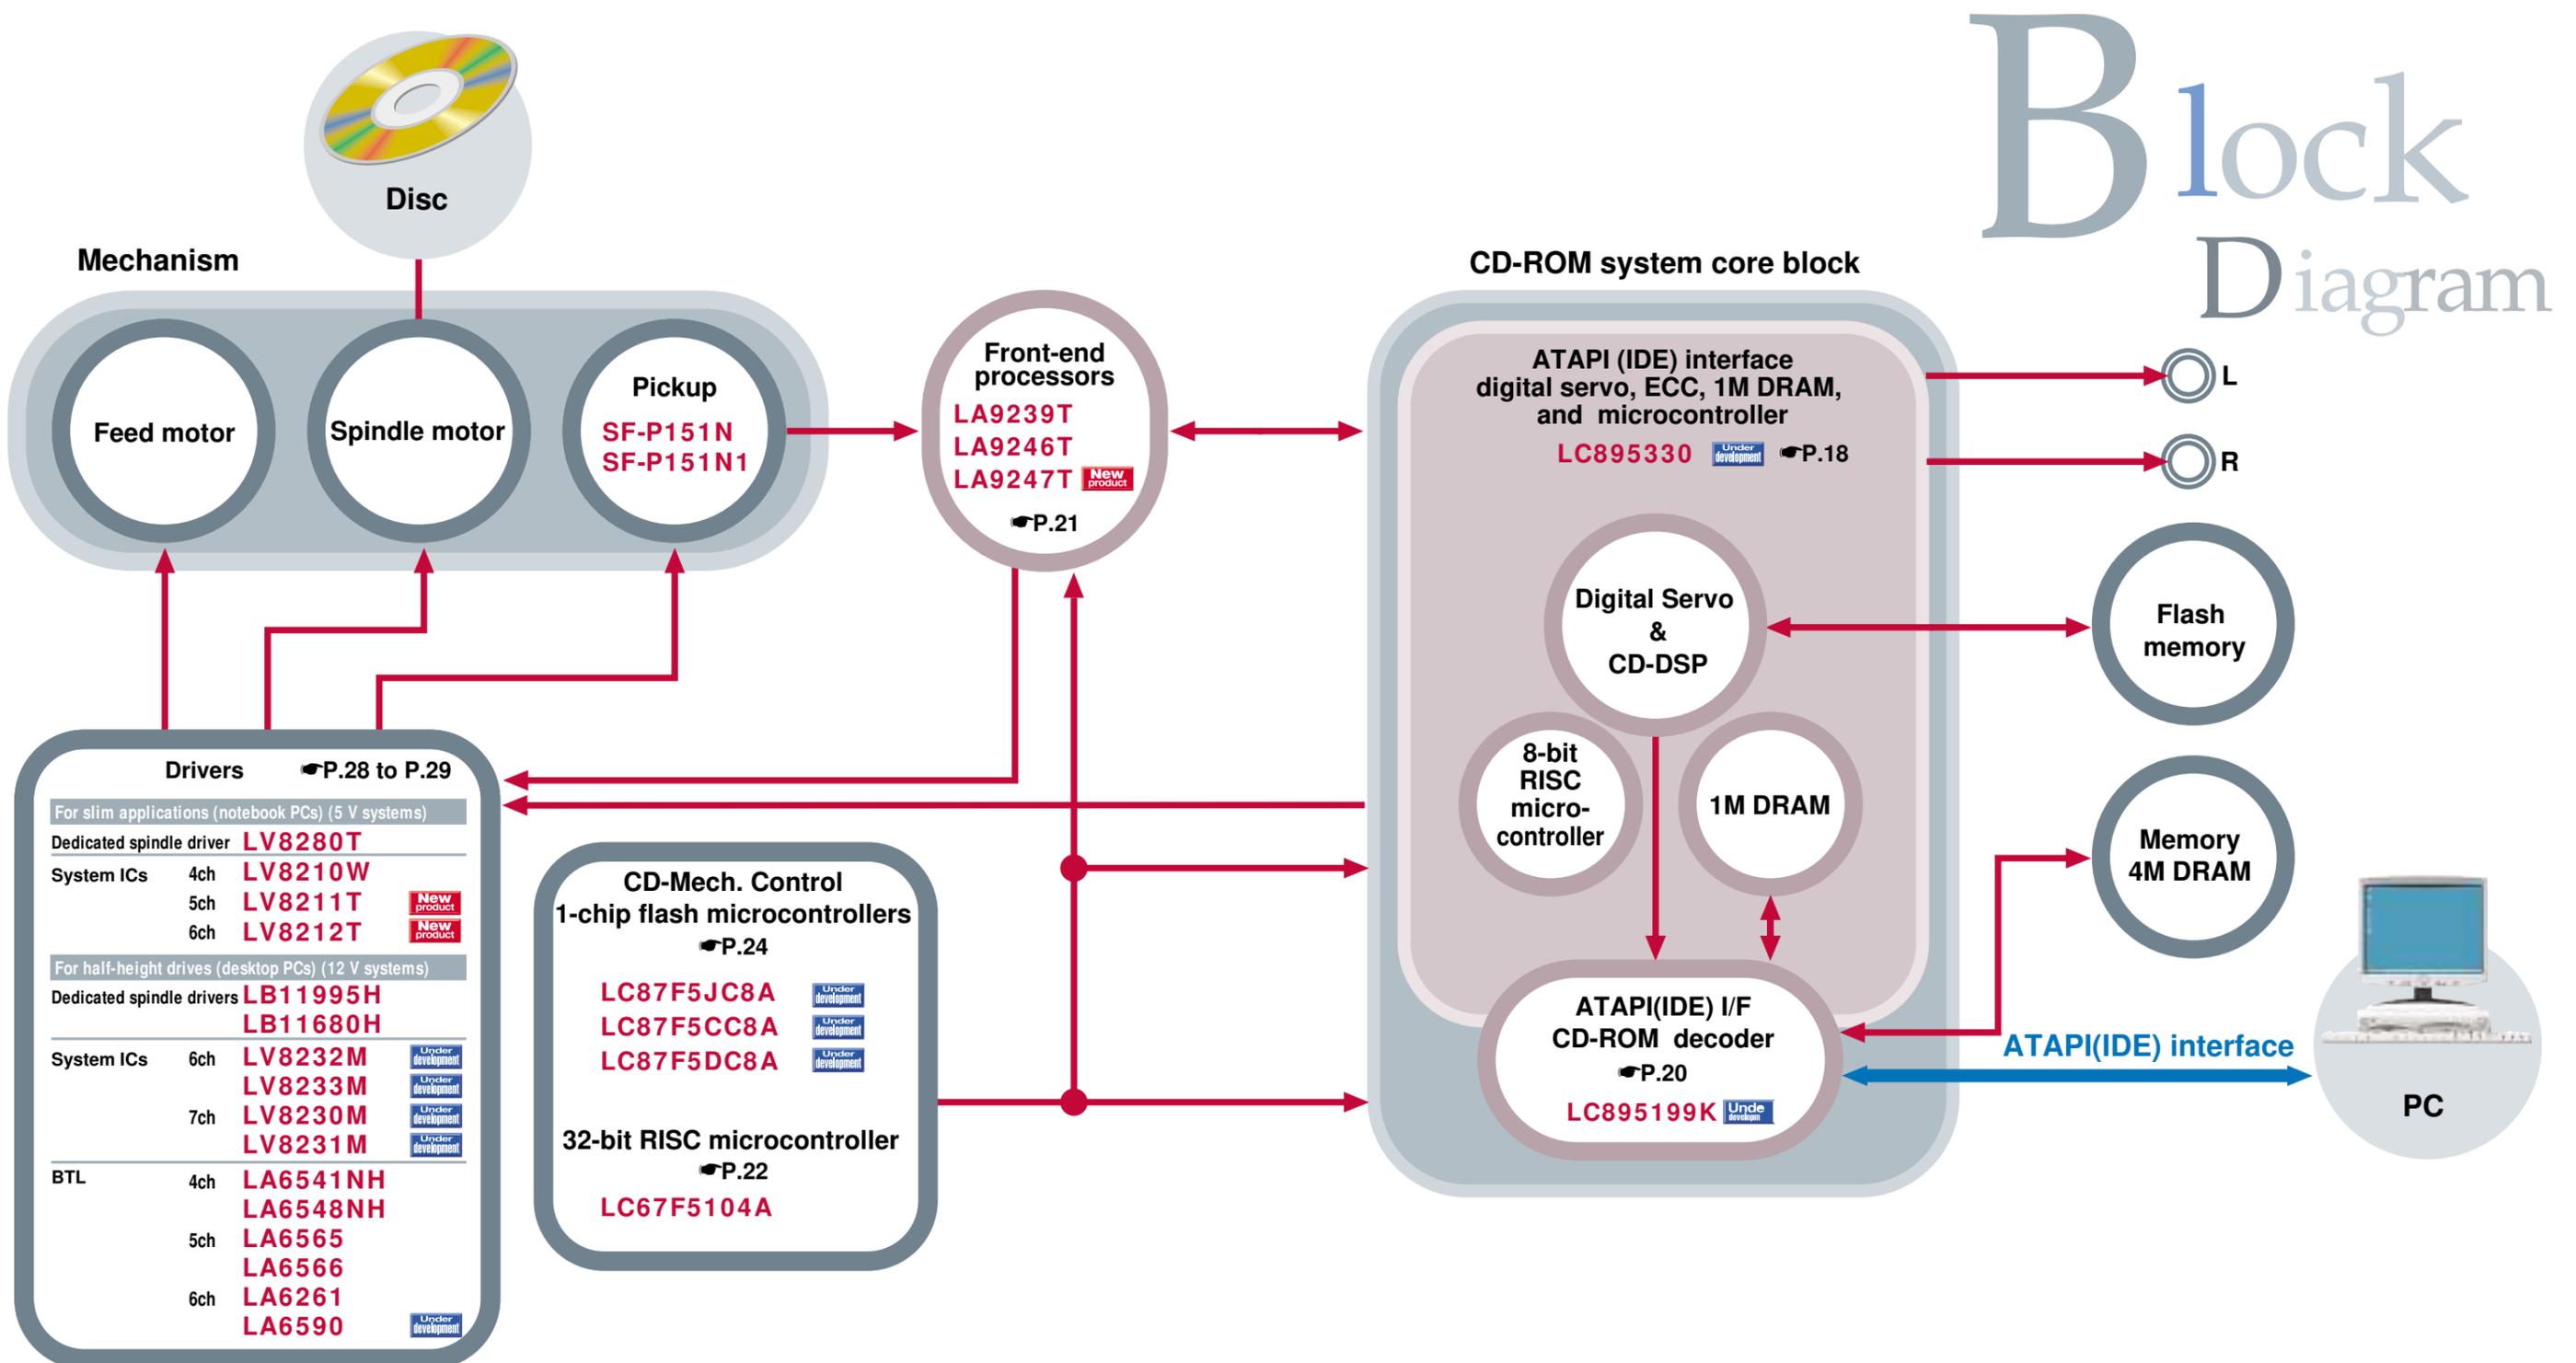

### Features of the HD-BURN Technology

1. Records twice the amount of data on standard commercial CD-R media.
2. Uses the CLV recording technique. In HD-BURN mode, the player writes at up to 36× speed (relative to normal speed CD-ROM), and reads at up to 80× speed.
3. This IC includes the BURN-Proof function (see page 15) and prevents write errors due to buffer underrun.
4. Includes DVD video format authoring functions, including file conversion from the DV format.
5. Can write data to commercial CD-RW media at a CD-ROM speed of 24× in HD-BURN mode.

\*: The HD-BURN function operates with the following CD-R writing application software: "B's GOLD" (BHA Corporation) and "Nero" (Ahead Software).

# CD-ROM System Chipsets

Complete conformity to ATAPI-related standards. We have achieved high-speed CAV control CD-ROM.

Flash memory products are licensed from Silicon Storage Technology, Inc. (USA), and manufactured and sold by SANYO Electric Co., Ltd.

# Decoder ICs for 48× ATAPI (IDE) CD-ROM Drives

Only SANYO, the first to commercialize ICs combining CD-ROM decoding and error correction functions, offers such a broad lineup covering so many needs.

## 48× ATAPI (IDE) CD-ROM Decoder and CD-DSP IC with Built-in Digital Servo and Microcontroller

### CD-DSP block

- 48× complete CAV possible
- Frame synchronization signals are detected, protected and interpolated, ensuring stable data readout.
- EFM signal is demodulated and converted to 8-bit symbol data.
- After subcode Q signal is subjected to a CRC check, it is output to microprocessor via parallel I/O.
- Performs the unscrambling and deinterleaving operations that reorder the demodulated EFM signal to the stipulated order.
- Detection, correction and flag processing of error signals (C1: dual, C2: quadruple)
- C2 flag is set after comparing C1 flag and C2 check results, and signal interpolation and muting is carried out by the C2 flag.
- Muting function that provides both zero-cross muting and soft muting.
- Independent digital attenuators for the left and right channels (8-bit precision). This attenuator function provides both direct attenuation and soft attenuation.
- Bilingual support
- Digital audio interface that supports both CLV and CAV playback.
- Digital de-emphasis
- 8× oversampling and digital filtering
- Digital to analog converter (PWM output)

### CD-ROM decoder, ATAPI (IDE) I/F block

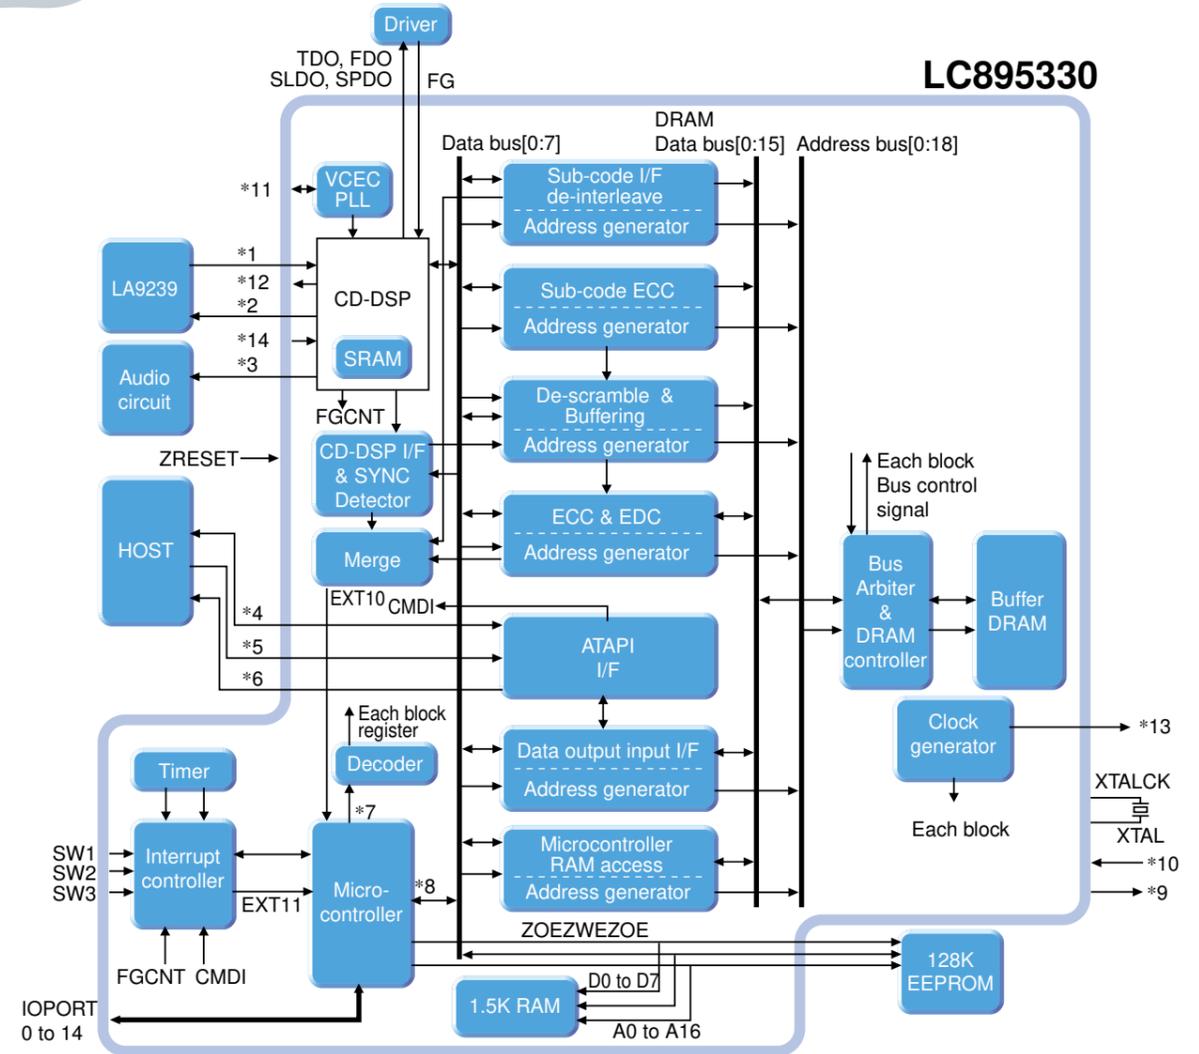

- ATAPI (IDE) interface
- 1-Mbit EDO-DRAM
- CD main channel, C2 flag and subcode areas within on-chip buffer DRAM can arbitrarily be set by the user.
- Batch transfer function (Function which sends CD main channel, C2 flag, subcode, etc. all at once.)
- Multiblock transfer function (Function which automatically sends multiple blocks at once.)
- CAV-audio function
- Subcode P-W buffering function (No-ECC) and CD-TEXT support
- Ultra DMA MODE 2, MODE 1, MODE 0 support

### Microcontroller block

- Intel 8051 equivalent microcontroller
- The built-in Intel 8051 equivalent core is, on average, eight times faster than the original Intel 8051.
- Performs 16-bit calculations.
- Timer 0.1 circuits
- Program download function for external flash memory

● Package: LQFP176

# 32-Bit RISC Microcontrollers

These microcontrollers achieve performance and functionality improvements in optical disc drives with recording technologies such as acceleration technologies and write strategy and ATIP circuits as well as digital servo technologies. Furthermore, finer design rules mean that SANYO's system on chip and system IC technologies are evolving even further. SANYO is committed to continuing to invest in R&D to support further developments in DVD and other optical disc drives

## Large On-chip Flash EEPROM Capacity

### LC67 Series

#### Overview

The LC67 Series products are multi-function high-speed single-chip 32-bit CMOS microcontrollers based on the ARM7TDMI<sup>®</sup> de facto industry standard CPU core. They feature large memory capacities of up to 4 Mbits of on-chip flash ROM and 128 Kbits of SRAM. These microcontrollers allocate the last 16 KB of flash ROM as a dedicated boot area to allow on-board downloading of data and code even when mounted in an end product.

The LC67 Series are particularly well suited for control of PC peripherals, such as CD-R/RW and hard disk drives since they integrate, on the same chip, a wide range of peripheral functions, including DMA controller, interrupt controller, serial interface, UART, 8-bit A/D converter, multi-function timer, watchdog timer, and power saving functions. They also provide an external memory space consisting of four independent 16 MB areas. Chip select can be applied to each of these areas for independent control.

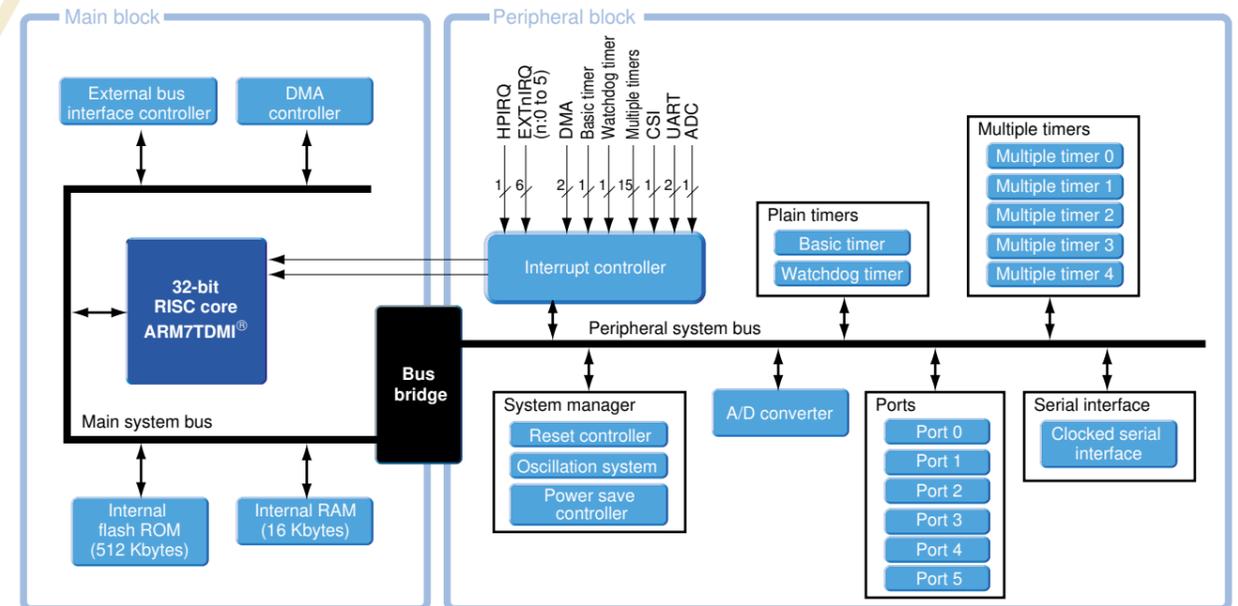

## Target Applications Using LC67 Series

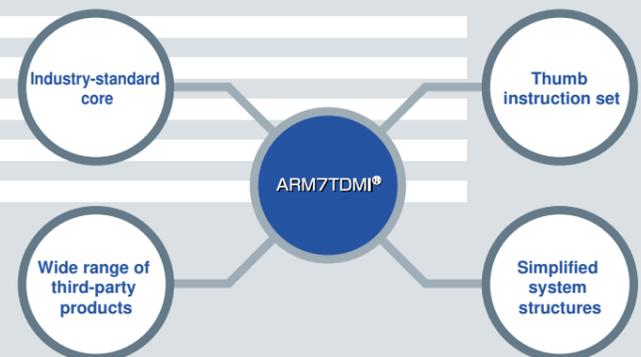

#### LC67 Series

	LC67F5106A <small>New product</small>	LC67F5104A
Package	TQFP100	
Operating supply voltage	Internal: 2.5 V, I/O, A/D converter: 3.3 V	
Flash ROM	6 Mbits	4 Mbits
SRAM	256 Kbits	128 Kbits
Maximum operating speed	18 MHz	
Number of I/O pins	68 I/O pins, 8 input pins	
Number of interrupts	External: 7, internal: 23	
Timers	16 bits × 5 channels (multifunction timer), 16 bits × 1 channel (basic timer)	
SIO	One channel	
UART	One channel	
A/D converter	Eight-channel 8-bit A/D converter	
DMAC	Two channels	
Power saving function	Sleep and standby modes

# 8-Bit Flash Microcontrollers

SANYO's LC87 Series of 8-bit microcontrollers features a rich instruction set. A high-speed parallel interface, serial I/O with automatic transfer, and high-speed computation make the LC87 microcontrollers ideal for CD-ROM/R/RW drives and similar embedded control applications. The flash memory versions support onboard rewriting of memory contents, providing flexibility that helps shorten development times for application systems.

## LC87 Series

### Overview

The **LC87 Series** products are multifunction high-speed 8-bit single-chip CMOS microcontrollers that provide a rich set of multiply and divide and 16-bit access instructions. They are based on the LC87 core, which features a 256K program ROM space. The flash memory versions support on-board rewriting of memory contents, providing flexibility that helps shorten development times for application systems.

The **LC875 Series** consists of single-chip microcontrollers with a broad range of the functionality necessary for real-time equipment control systems: high speed CPU core, ROM, RAM, parallel interface, 8-bit analog-to-digital converter, 16-bit timer/counters with input capture, 16-bit timer/counters configurable for PWM output, clock timers, watchdog timers, two 8-bit serial I/O channels with automatic transfer functions, asynchronous/synchronous serial I/O, 12-bit PWM, I/O ports, rich types of interrupt, and standby modes of operation.

### Features

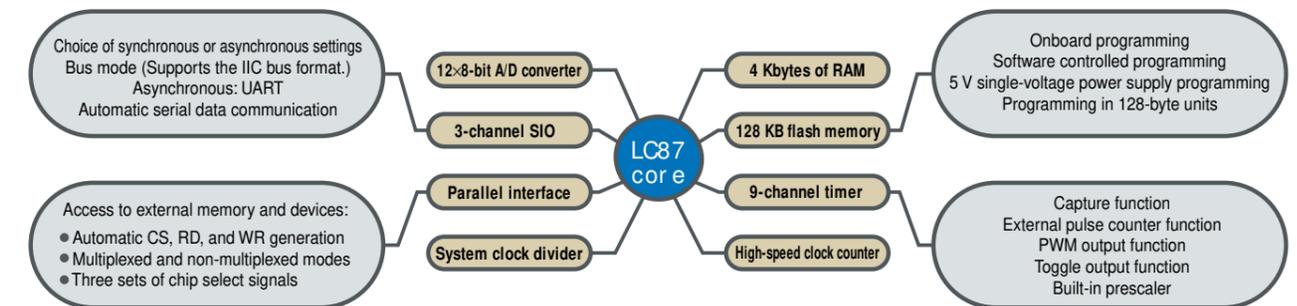

- 16 to 256 Kbytes of ROM
- 1024 to 8192 bytes of RAM
- 8-bit analog-to-digital converters with 12 channels
- 16-bit timer/counter 0 with input capture and four operating modes
  - Mode 0: Two 8-bit timers with 8-bit programmable prescalers
  - Mode 1: 8-bit timer with 8-bit programmable prescaler plus 8-bit counter
  - Mode 2: 16-bit timer with 8-bit programmable prescaler
  - Mode 3: 16-bit counter
- 16-bit timer/counter 1 with four operating modes
  - Mode 0: 8-bit timer plus 8-bit timer/counter
  - Mode 1: Two 8-bit PWM outputs
  - Mode 2: 16-bit timer/counter
  - Mode 3: 16-bit timer with PWM output from lower 8 bits
- Four 8-bit timers with 6-bit programmable prescalers
- 14-bit clock timer
- Watchdog timer (requires external RC circuit)
- Two 8-bit serial I/O channels with automatic transfer function for up to 32 bytes
  - Two 8-bit baud rate generators
  - Maximum clock of  $4/3 t_{CYC}$
- One 8-bit synchronous/asynchronous SIO channel
  - Asynchronous clock: 8 to 2048  $t_{CYC}$
  - Synchronous clock: 2 to 512  $t_{CYC}$
- Two 12-bit PWM outputs
- Remote control receive circuit

- Broad interrupt support
  - 21 interrupt sources (7 external + 14 internal) and 10 vectors (LC87F52C8A)
  - 3-level multiplexed interrupt support
- Standby modes: HALT, HOLD, and clock HOLD
- High-speed operation
  - Minimum cycle time: 0.3  $\mu s$  (bus cycle 0.1  $\mu s$ )
  - Bit manipulation instruction cycle for registers and RAM: 0.3  $\mu s$
- Highly orthogonal instruction set (LC87 Series)
  - Powerful multiply/divide instructions:  $24 \times 16$ ,  $24/16$ ,  $16 \times 8$ ,  $16/8$
  - Additional 16-bit instructions
- Support for additional ROM
  - The LC87 core supports up to 256 Kbytes of program ROM, 64 Kbytes of RAM for calculations and stack, and 16 Mbytes for data memory.
- On-board programming
  - The flash ROM versions in the LC87 Series permit rewriting of the on-board ROM with a single power supply even after the chip has been mounted on the circuit board.

\*: The products presented in this section are representative examples.  
For further details, refer to SANYO's microcontroller catalogs and the data sheets for the individual products.

### Built-in: 256 Kbytes of Flash EEPROM

## LC87F5CC8A

Type Number	ROM [bits]	RAM [bits]	Operating supply voltage range $V_{DD}$ [V]	Ports	Interrupt		Serial I/O	Maximum number of timers	A/D converter	Delivery format
					Internal	External				
* LC875J48C	48K × 8	2048 × 9	2.5 to 5.5	55	14	7	Synchronous: Two 8-bit channels with automatic transfer support Asynchronous/synchronous: Two 8-bit channels	8 bits × 8 For realtime clock × 1	8 bits × 11	QFP64 TQFP64
* LC875J56C	56K × 8									
* LC875J64C	64K × 8									
* LC87F5JC8A	128K × 8 (Flash)	4096 × 9	2.5 to 5.5	71	14	8	Synchronous: Two 8-bit channels with automatic transfer support Asynchronous/synchronous: Three 8-bit channels	8 bits × 8 For realtime clock × 1	8 bits × 15	QFP80 (14 × 14) (14 × 20) TQFP80
* LC875D48C	48K × 8									
* LC875D56C	56K × 8									
* LC875D64C	64K × 8	4096 × 9	2.5 to 6.0	89	19	7	Synchronous: Three 8-bit channels with automatic transfer support Asynchronous/synchronous: Two 8-bit channels with bus support	8 bits × 8 For realtime clock × 1	8 bits × 12	QFP100 TQFP100
* LC875D72B	72K × 8									
* LC875D80B	80K × 8									
* LC875D96B	96K × 8	2048 × 9	2.5 to 5.5	89	14	8	Synchronous: Two 8-bit channels with automatic transfer support Asynchronous/synchronous: Three 8-bit channels	8 bits × 8 For realtime clock × 1	8 bits × 15	QFP100 TQFP100

# Flash Microcontrollers with On-Chip USB Interface Engine

These microcontrollers feature the ability to reload software while installed in the end product by downloading over a USB interface using SANYO's flash memory onboard programming system and a USB interface that conforms to version 1.1 of the USB standard. These microcontrollers also provide on-chip USB regulator and system clock PLL circuits for reduced parts counts in end products.

## Overview

The LC87 series are a line of products that feature an on-chip USB interface engine.

- Full-speed models: LC87F10C8A, LC87F16C8A

This series includes models that feature onboard

## Features

- Built-in USB interface engine
- Built-in flash program ROM allows programs to be reloaded.
- Programs can be updated from a personal computer using the USB interface.
- Extensive lineup including the LC87F1XXX and LC8715 Series full-speed versions
- The USB data area (FIFO buffer) is mapped to the microcontroller RAM area.
- Minimum instruction execution time: 250 ns (at 12MHz)
- 12-channel 8-bit A/D converter

programming, self-programming in 128-byte units, USB port voltage 3.3 V regulator circuit, large-capacity FIFO, and other features.

- The LC87F10C8A features on-chip debugger support

- Built-in PWM ports (2 to 4 ports)
- One or two powerful 16-bit timer circuits that can be used as two 8-bit timers.
- Clock counter divider (uses an external 32 kHz crystal oscillator)
- Powerful 10-level interrupt function supports 29 sources
- High-speed multiply and divide instructions: For example, a 16 bit × 8 bit multiply takes 5 t<sub>CYC</sub>.
- Noise rejection circuit for remote control signal reception
- Watchdog timer (uses an external RC circuit)

Type number	ROM [bits]	RAM [bits]	Operating supply voltage range V <sub>DD</sub> [V]	Ports Pins	Other functions			Endpoints	Delivery format		
					Interrupt Internal	Interrupt External	Serial I/O				
☆ LC87F16C8A	128K × 8 (Flash)	8192 × 9	2.7 to 3.6	39	22	9	Synchronous: 8-bit channel × 2 with automatic transfer support Asynchronous/synchronous: 8-bit channel × 1 with bus support	8 bits × 8 For realtime clock × 1	8 bits × 8	9	QFP48 SQFP48
☆ LC87F10C8A	128K × 8 (Flash)	8192 × 9	2.7 to 3.6	55			Synchronous: 8-bit channel × 3 with automatic transfer support Asynchronous/synchronous: 8-bit channel × 1 with bus support		8 bits × 8	9	QFP64 SQFP64

## USB Version 1.1 Compliant 128 Kbytes Flash Microcontroller

### LC87F16C8A

New product

## Features

- ROM: 131,072 × 8 bits (flash memory)
- RAM: 8,192 × 9 bits
- Timers: Two 16-bit (each usable as two 8-bit) programmable timers, four 8-bit programmable timers, one base timer.
- I/O: 50 pins (excluding the PWM outputs and filter ports)
- PWM ports: Two 12-bit PWM + one 16-bit PWM (usable as two 8-bit PWM) outputs.
- \*: Control is shared with the timer control.
- USB: 9 endpoints
- Instruction execution time: 250 ns (at 12 MHz)
- 12-channel A/D converter
- Watchdog timer
- Noise exclusion circuit for remote control signal reception
- Interrupts: 29 sources, 10 vector locations
- Supply voltage (operating range): 2.7 to 5.5 V.
- Packages: SQFP64, QFP64

## USB Version 1.1 Compliant 128 Kbytes Flash Microcontroller

### LC87F10C8A

New product

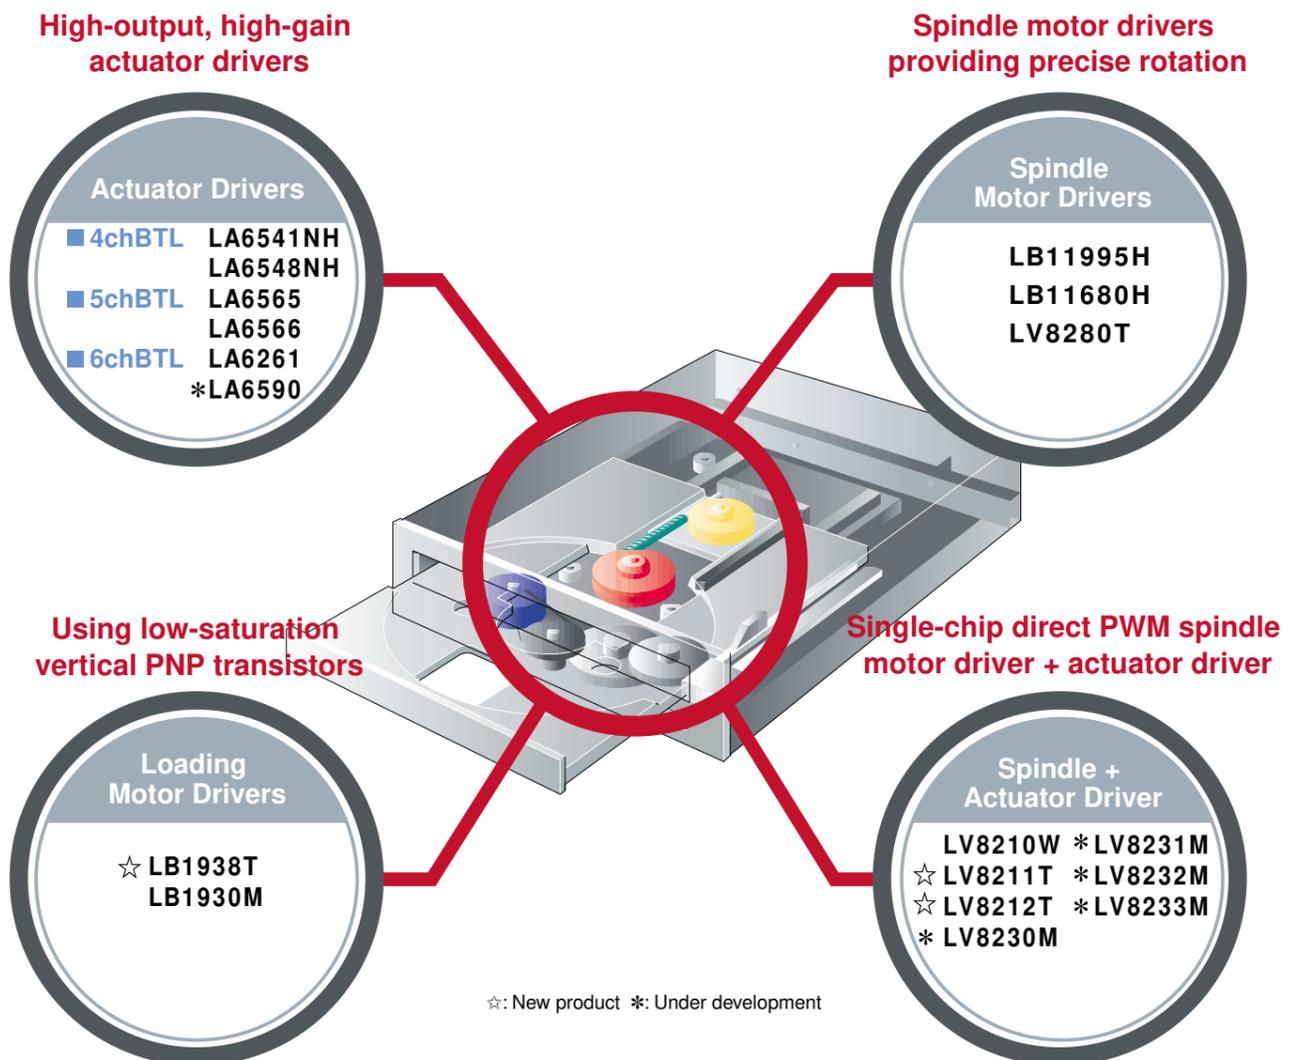

## Features

- ROM: 131,072 × 8 bits (flash memory)
- RAM: 8,192 × 9 bits
- Timers: Two 16-bit (each usable as two 8-bit) programmable timers, four 8-bit programmable timers, one base timer.
- I/O: 55 pins (excluding the PWM outputs and filter ports)(usable as two 8-bit PWM)
- \*:Control is shared with the timer control
- PWM ports: Two 12-bit PWM + one 16-bit PWM
- USB: 9 endpoints
- Instruction execution time: 250 ns (at 12 MHz)
- SIO:4 channels (synchronous: three 8-bit channels, asynchronous/synchronous: one 8-bit channel)
- 12-channel A/D converter
- Watchdog timer
- Noise rejection circuit for remote control signal reception
- Supply voltage (operating range): 2.7 to 3.6V.
- Packages: TQFP64, QFP64

# PC-Related Motor Driver ICs

SANYO small, precise motor driver ICs, gaining high marks in a wide range of fields. SANYO's CD-ROM system expertise makes it possible to provide custom-specification motor driver ICs fast, using the company's accumulated CAD technology, comprehensive process menu, and latest circuit technology.

## Single-Chip Spindle Motor Driver + Actuator Driver Products

Field	Type number	Package	Supply voltage			Output current lo max (A)	Allowable power dissipation Pd max (W)	Drive type	Functions and features	
			Control system V <sub>op</sub> (V)	Drive system V <sub>cc</sub> (V)	Motor system V <sub>st</sub> (V)				Hall device FG	TSD
Slim	LV8210W	SQFP48	4.5 to 5.5	—	1.0	—	PWM sensorless	Single phase or 3 phases	▲	Four driver channels. Spindle: Direct PWM drive, voltage control, and built-in current limiter. Actuators: Channels 1 to 3 are PWM BTL drivers.
	☆ LV8211T	TQFP64J	4.5 to 5.5	—	1.3	—		Single phase and 3 phases	▲	Five driver channels. Spindle: Direct PWM drive, voltage control, and built-in current limiter. Actuators: Channels 1 and 2 are PWM BTL drivers, channels 3 and 4 are current feedback, PWM drive, built-in current limiter.
	☆ LV8212T	TQFP64J	4.5 to 5.5	—	1.3	—		Single phase and 3 phases	▲	Six driver channels. Spindle: Direct PWM drive, voltage control, and built-in current limiter. Actuators: Channels 1 to 3 are PWM BTL drivers, channels 4 and 5 are current feedback, PWM drive, built-in current limiter.
Half-height	* LV8230M		4.0 to 5.5	4.0 to 14.0	1.5	—	PWM	Single phase or 3 phases	▲	Seven driver channels. Spindle: Direct PWM drive, voltage control, and built-in current limiter. Actuators: Three BTL driver channels and 2 sled and 1 loading driver channels are current feedback, PWM drive, built-in current limiter.
	* LV8231M		4.0 to 5.5	4.0 to 14.0	1.5	—		Single phase or 3 phases	▲	Seven driver channels. Spindle: Direct PWM drive, voltage control, and built-in current limiter. Actuators: Four BTL driver channels and 2 sled driver channels are current feedback, PWM drive, built-in current limiter.
	* LV8232M		4.0 to 5.0	4.0 to 14.0	1.5	—		Single phase or 3 phases	▲	Six driver channels. Spindle: Direct PWM drive, voltage control, and built-in current limiter. Actuators: Two BTL driver channels and 2 sled and 1 loading driver channels are current feedback, PWM drive, built-in current limiter.
	* LV8233M		4.0 to 5.0	4.0 to 14.0	1.5	—		Single phase or 3 phases	▲	Six driver channels. Spindle: Direct PWM drive, voltage control, and built-in current limiter. Actuators: Three BTL driver channels and 2 sled driver channels are current feedback, PWM drive, built-in current limiter.
