

## Over Sampling Digital Filter LSI

## Description

CXD1088AQ is a digital filter LSI with quadrupled sampling rate, developed for compact disc player.

## Features

- 83rd and 21st order filters linked through cascade connections provide a quadrupled sampling digital filter
- Built-in filters for 2 channels corresponding to L and R
- Variety of functions including soft-muting and offset addition
- 83rd and 21st order filters also have 2 modes of filter coefficients each, to enable the selection of the most suitable filter characteristics, required for usage.

## Functions

- Filters for two channels
- Filtering with a quadrupled sampling rate
- Two-stage FIR filters interconnected in cascade (83rd order+21st order)
- 18-bit serial output possible
- Switching between serial and parallel output modes
- $\pm 1\%$  offset addition
- Soft-muting function
- Independent linear error correction for either L or R, up to 8 words
- 2 modes of coefficients provided for both 83rd and 21st orders (refer to "Filter Characteristics")
- Input/output format
  - Input: 2's complement; MSB first (serial)
  - Output: 2's complement; MSB first (serial)  
Offset binary (parallel)

## Structure

Silicon gate CMOS IC

Absolute Maximum Ratings ( $T_a = -25$  to  $+75^\circ\text{C}$ )

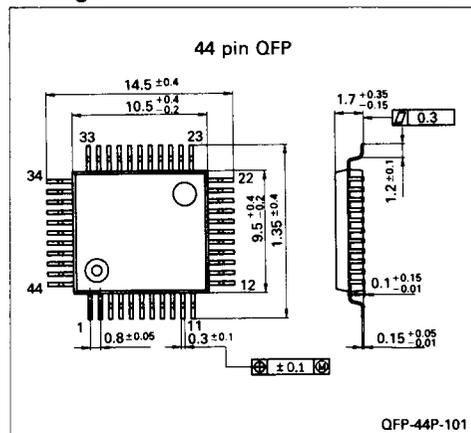

• Supply voltage	$V_{DD}$	-0.5 to +6.5	V
• Input voltage	$V_I$	-0.5 to $V_{DD} + 0.5$	V
• Storage temperature	$T_{stg}$	-55 to +150	$^\circ\text{C}$
• Allowable power dissipation	$P_D$	450	( $T_a = 75^\circ\text{C}$ ) mW

## Recommended Operating Conditions

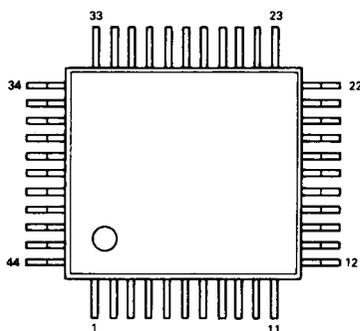

• Supply voltage	$V_{DD}$	4.5 to 5.5	V
• Operating temperature	$T_{opr.}$	-20 to +75	$^\circ\text{C}$
• OSC frequency	$f_x$	10 to 20	MHz

## Package Outline

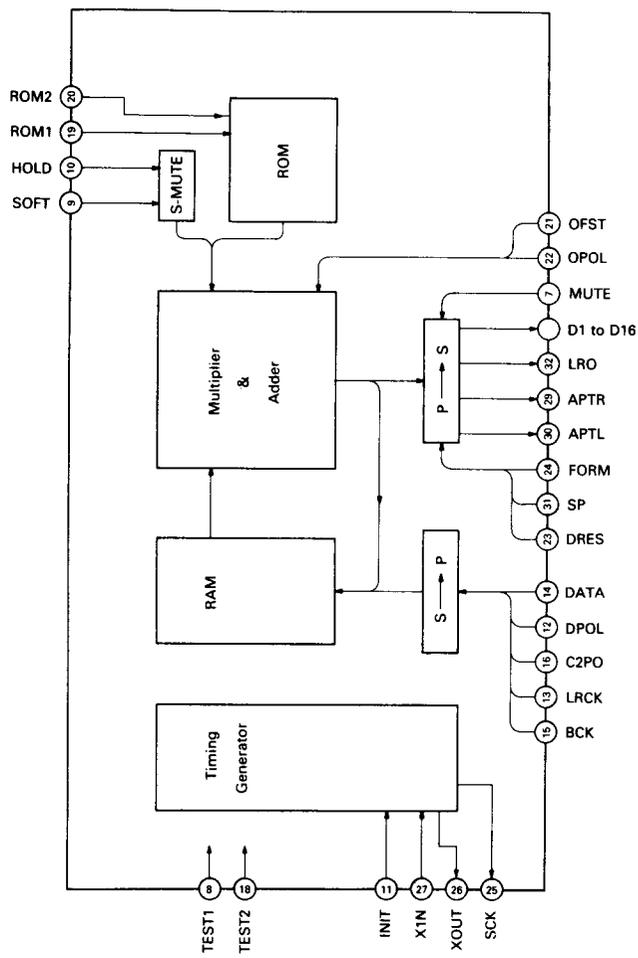

Unit: mm

Pin Configuration (Top View)

Block Diagram

## Pin Description

No.	Symbol	I/O	Description
1 to 5	D <sub>12</sub> to D <sub>16</sub>	O	D <sub>12</sub> to D <sub>16</sub> output pins when the parallel output mode is selected; fixed at "L" level when the serial output mode is selected.
6	V <sub>SS</sub>	-	Negative power supply (0V).
7	MUTE	I	Mutes the output to "0" or an offset value; active at "H" level.
8	TEST1	I	Test pin; normally, fixed at "L" level
9	SOFT	I	Soft muting ON/OFF switch; ON at "H" level
10	HOLD	I	Stops soft muting at "H" level
11	INIT	I	Power-on-Reset input pin; active at "L" level
12	DPOL	I	Reverses the polarity of input data
13	LRCK	I	LRCK input pin
14	DATA	I	"16 bits×2" serial data input pin; 2's complement
15	BCK	I	BCK input pin
16	C2PO	I	Error flag input pin
17	V <sub>DD</sub>	-	Positive power supply (+5V)
18	TEST2	I	Test pin; normally, fixed at "L" level.
19	ROM1	I	ROM switching for 83rd order (Refer to "Filter Characteristics.")
20	ROM2	I	ROM switching for 21st order (Refer to "Filter Characteristics.")
21	OFST	I	Adds an offset to the output; active at "H" level.
22	OPOL	I	Specifies the polarity of offset values; "H": +1%; "L": -1%
23	DRES	I	Indicates the word length of data for SONY format serial output; "H": 18bits; "L": 16bits.
24	FORM	I	Specifies the output format; "H": I <sup>2</sup> S; "L": SONY
25	SCK	O	System clock output for external IC; (384fs)
26	XOUT	O	Output pin of crystal oscillation circuit; (384fs)
27	XIN	I	Input pin of crystal oscillation circuit; (384fs)
28	V <sub>SS</sub>	-	Negative power supply (0V)
29	APTR	O	Aperture clock for R channel
30	APTL	O	Aperture clock for R channel
31	SP	I	Switches serial/parallel output modes; "H": parallel; "L": serial.
32	LRO	O	LRCK output (4fs)
33	D <sub>1</sub>	O	D <sub>1</sub> (MSB) output pin when the parallel output mode is selected; BCK (4fs) output pin when the serial output mode is selected.
34	D <sub>2</sub>	O	D <sub>2</sub> output pin when the parallel output mode is selected; DATA (4fs) output pin when the serial output mode is selected.
35	D <sub>3</sub>	O	D <sub>3</sub> output pin when the parallel output mode is selected; LRCK (I <sup>2</sup> mode) or WCK (SONY mode) output pin when the serial output mode is selected.
36 to 38	D <sub>4</sub> to D <sub>6</sub>	O	D <sub>4</sub> to D <sub>6</sub> output pins when the parallel output mode is selected; fixed at "L" level when the serial output mode is selected.
39	V <sub>DD</sub>	-	Positive power supply (+5V)
40 to 44	D <sub>7</sub> to D <sub>11</sub>	O	D <sub>7</sub> to D <sub>11</sub> output pins when the parallel output mode is selected; fixed at "L" level when the serial output mode is selected.

## Electrical Characteristics

## DC characteristics

 $V_{DD}=4.5$  to  $5.5V$ ,  $T_a=-20$  to  $+75^{\circ}C$ 

No.	Item	Symbol	Condition	Min.	Typ.	Max.	Unit
27	Input leak current	$I_{LI}$	$V_I=V_{DD}/0V$	–	–	$\pm 20$	$\mu A$
7,9,10 to 16, 19 to 24,31	"H" input voltage	$V_{IH}$	–	$0.76V_{DD}$	–	–	V
	"L" input voltage	$V_{IL}$	–	–	–	$0.24V_{DD}$	V
	Input leak current	$I_{LI}$	$V_I=V_{DD}/0V$	–	–	$\pm 5$	$\mu A$
29,30,32 to 35	"H" output voltage	$V_{OH}$	$I_O=-4mA$	$V_{DD}-0.5$	–	–	V
	"L" output voltage	$V_{OL}$	$I_O=4mA$	–	–	0.4	V
2 to 5, 36 to 38, 40, 44	"H" output voltage	$V_{OH}$	$I_O=-1mA$	$V_{DD}-0.5$	–	–	V
	"L" output voltage	$V_{OH}$	$I_O=1mA$	–	–	0.4	V
25	"H" output voltage	$V_{OH}$	$I_O=-5mA$	$V_{DD}-1.0$	–	–	V
	"L" output voltage	$V_{OL}$	$I_O=5mA$	–	–	1.0	V
	Current consumption	$I_{DD}$	Under no load: $V_I=V_{DD}/0V$ , $f_x=16.93MHz$	–	–	40	mA

## AC characteristics

 $V_{DD}=4.5$  to  $5.5V$ ,  $T_a=-20$  to  $+75^{\circ}C$ 

Item	Symbol	Condition	Min.	Typ.	Max.	Unit	
Oscillating frequency	$f_{xt}$		–	16.9344	20.0	MHz	
Input BCK frequency	$f_{BCK}$		–	–	3.1	MHz	
Input BCK pulse width	$t_{WB}$		100	–	–	ns	
Input data set-up time	$t_{DS}$		20	–	–	ns	
Input data hold time	$t_{DH}$		20	–	–	ns	
Input LRCK set-up time	$t_{LRS}$		50	–	–	ns	
Input LRCK hold time	$t_{LRH}$		50	–	–	ns	
Output BCK pulse width	$t_{WOB}$		$I^2S$ serial output mode $f_{XT}=16.9344MHz$ $C_L=50pF$	70	–	–	ns
Output data set-up time	$t_{ODS}$			40	–	–	ns
Output data hold time	$t_{ODH}$	40		–	–	ns	

**Functions**

**Soft muting**

Mutes or de-mutes output data within approximately 23ms (1024/fs). The output level can be held during muting operation.

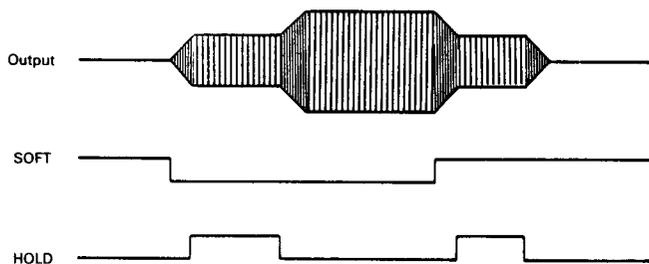

Fig. 1

**Offset**

Adds an offset to the output data. The offset amount can be positive or negative.

Table 1

OFST	OPOL	Offset amount
L	-	0%
H	L	-1%
H	H	+1%

## Muting

When MUTE goes high or INIT goes low, the output is muted. An offset value which has been set following Table 1 above is output.

## Data polarity

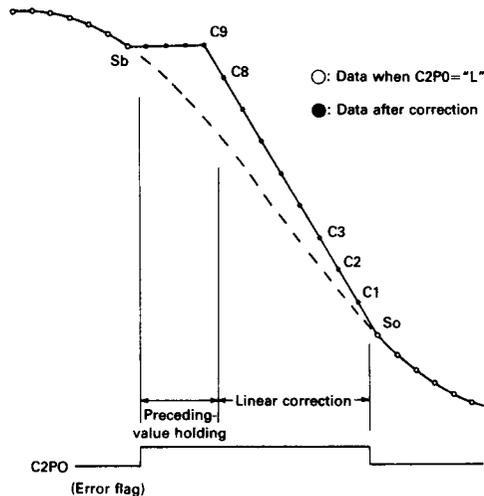

Allows switching between inversion and non-inversion of output data polarity.

When DPOL level is "L": the output data is not inverted with respect to the input data.

When DPOL level is "H": the output data is inverted with respect to the input data.

## Error correction

Errors in an input data block consisting of up to eight consecutive data units can be linearly corrected by the two correct data units, the one preceding the erroneous block and the other following it. (This is done separately for L and R.) For errors of more than eight consecutive input data units, only the last eight data are linearly corrected, and all preceding data units are maintained without correction.

## Input and output

### 1) Input

The changeover point of MSB first serial data (fs) of 2's complement represents the switching of LRCK. Of this data string, only the data of the last 16-bit clock (BCK) are valid.

When INIT="L" (resetting), the input data are invalid and the input is equivalent to ALL "0."

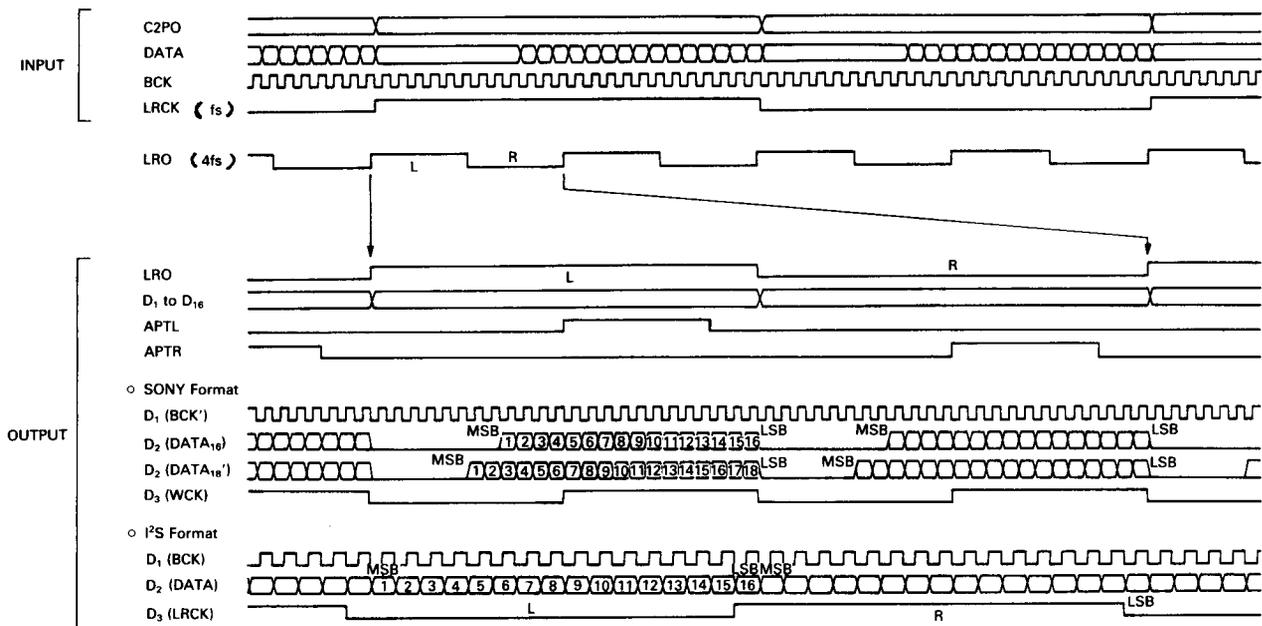

### 2) Output

SP="L": MSB first serial data (4fs) of 2's complement

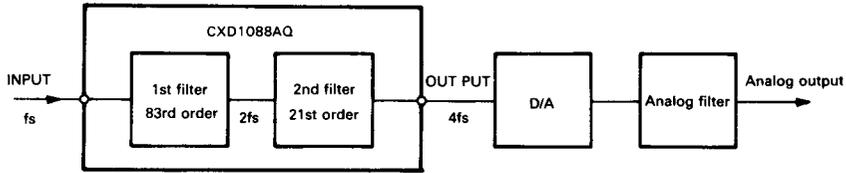

SP="H": offset binary parallel data (4fs)

Clock pulses such as LRO and BCK are constantly output as long as the power is on. Data are output only when resetting is canceled (INIT="H") when MUTE="L." Otherwise, muting remains effective.

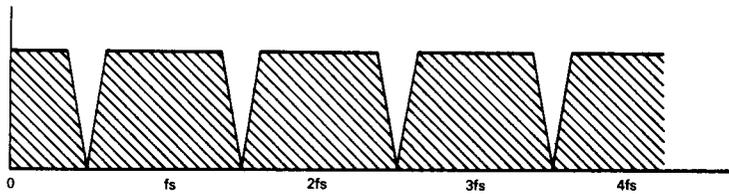

# I/O Timing Chart

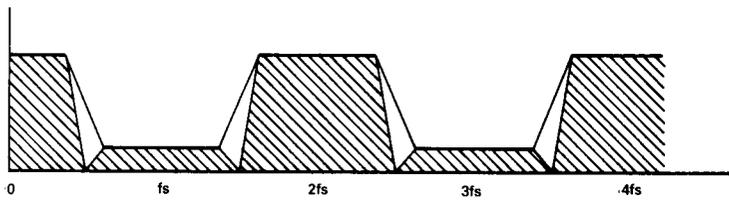

Filter Characteristics

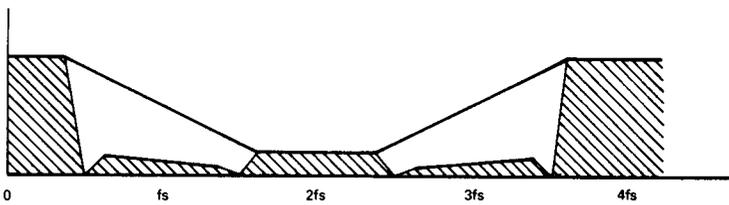

Input spectrum

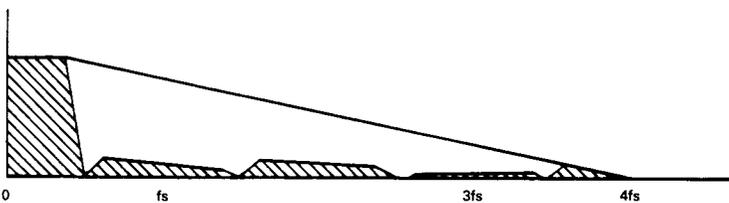

Characteristics of 1st filter

Characteristics of 2nd filter

Characteristics of analog filter

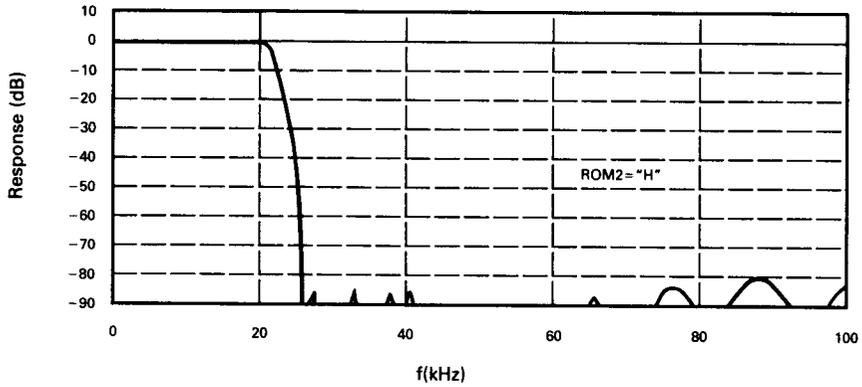

**Combined Filter Characteristics (1st filter + 2nd filter)**

1) ROM1="H"

Stop band attenuation: 80dB Min. (over 25.7kHz)

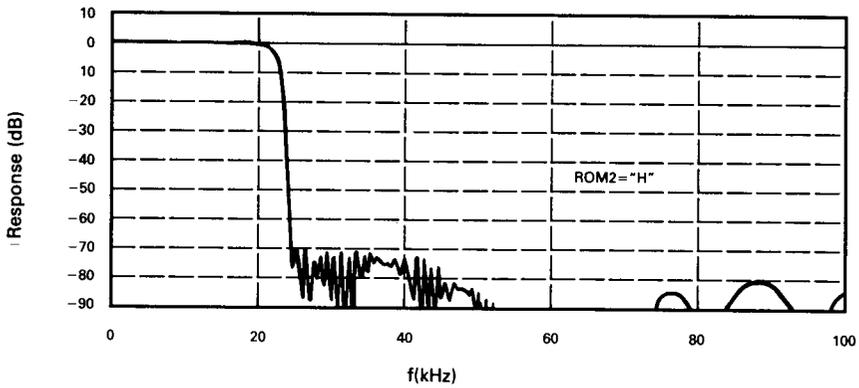

Pass band ripple:  $\pm 0.001$ dB Max.

2) ROM1="L"

Stop band attenuation: 60dB Min. (24.1kHz); 65dB Min. (over 24.2kHz)

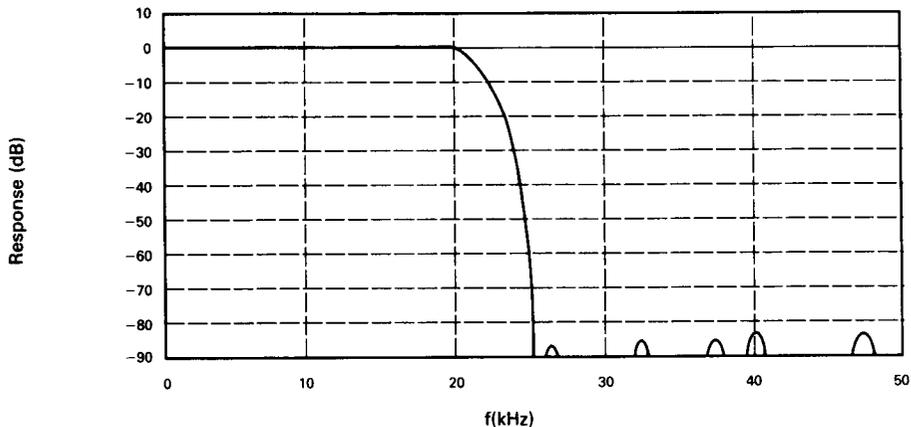

Pass band ripple:  $\pm 0.004$ dB Max.

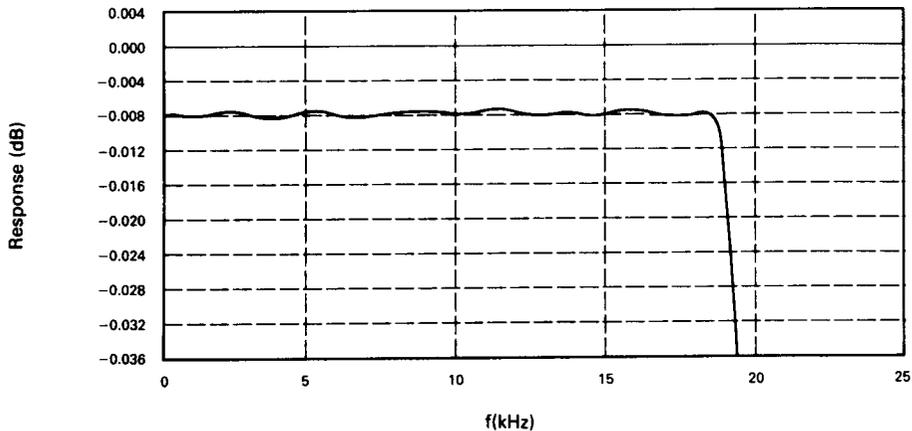

**Filter Characteristics-1**

1st Filter (83rd order, ROM1="H")

**Frequency characteristics of filter**

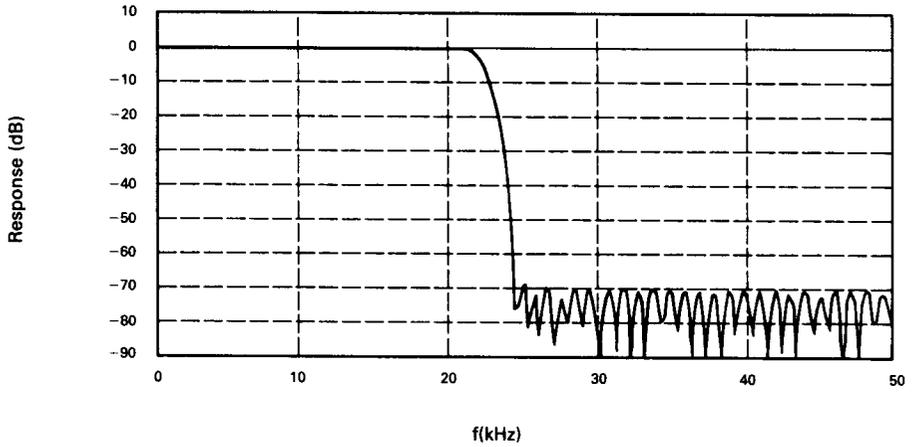

**Ripple characteristics in pass band**

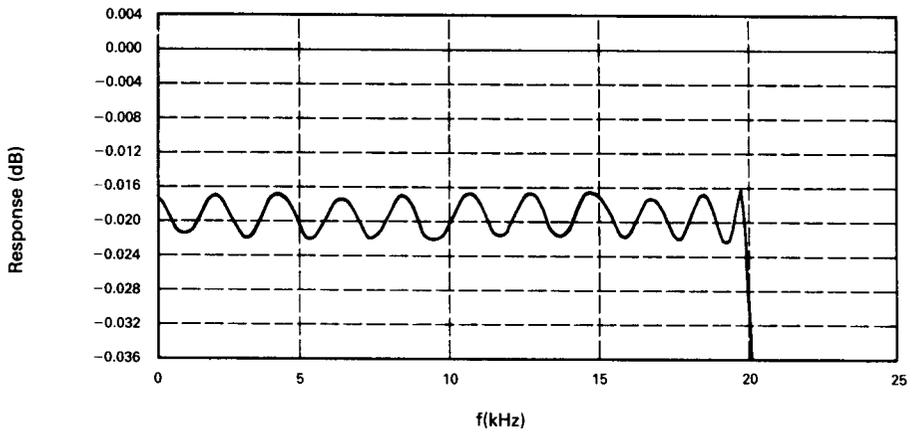

### Filter Characteristics-2

1st Filter (83rd order, ROM1="L")

#### Frequency characteristics of filter

#### Ripple characteristics in pass band

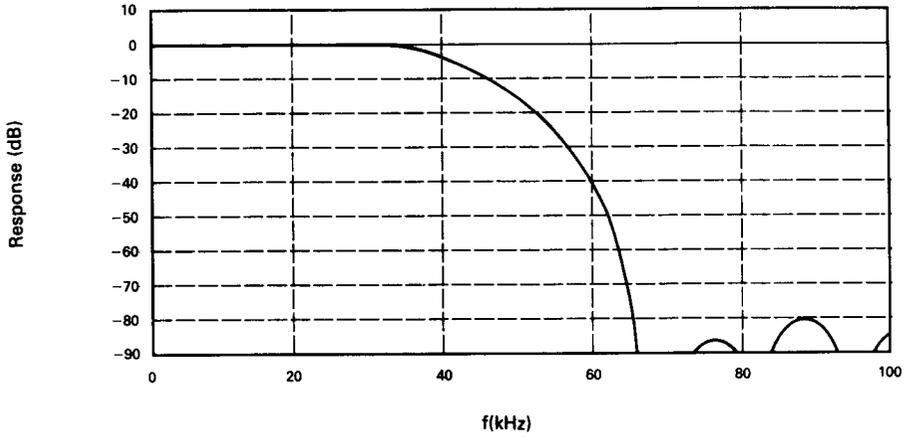

**Filter Characteristics-3**

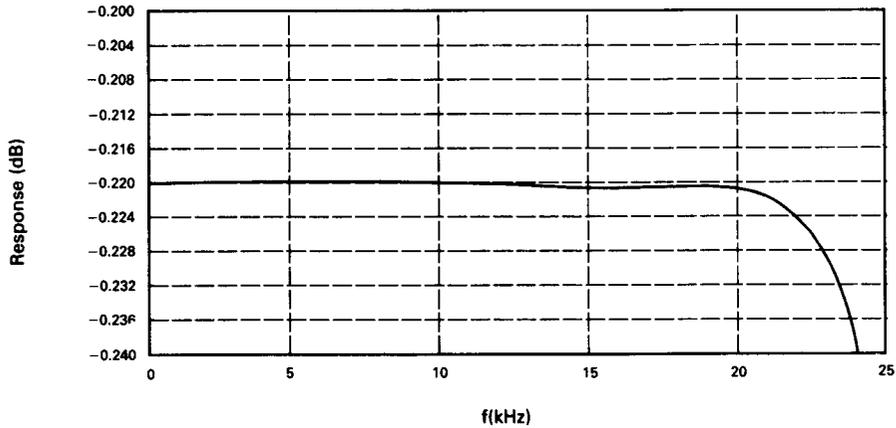

2nd Filter (21st order, ROM2="H")

- Marked flatness in pass band (without frequency characteristics compensation)

**Frequency characteristics of filter**

**Ripple characteristics in pass band**

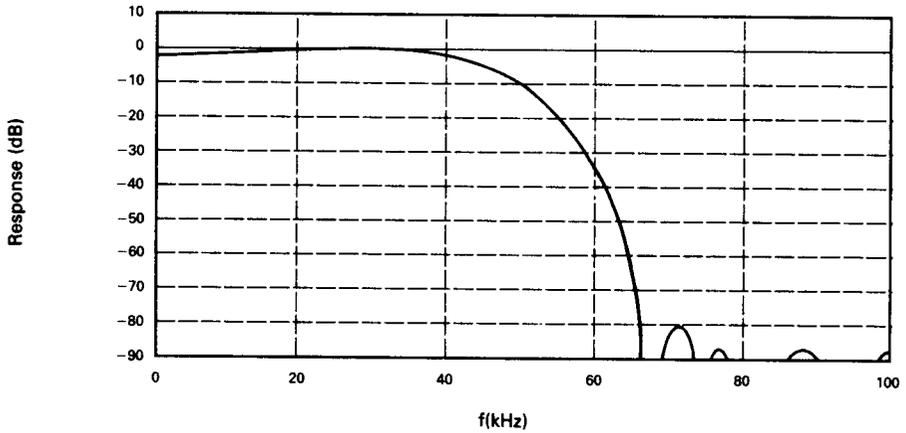

**Filter Characteristics-4**

2nd Filter (21st order, ROM2="L")

- Pass band frequency characteristics (compensation of aperture effect of analog third order Bessel filter characteristics)

**Frequency characteristics of filter**

**Ripple characteristics in pass band**  
(Excluding frequency characteristics compensation)
