INTRODUCING

Burroughs B800

A small-scale computer with remarkable growth capability.

The B 800 Offers Comprehensive "Problem Solving" Capability.

Powerful processing (up to twice that of the very popular B 700) is combined with operating simplicity and Burroughs BMS® Application Programs to quickly generate operating and control information for better business management.

The B 800 Is Designed For Easy, Economical Growth.

You can expand your basic system easily and add new applications without changing original programs or data files. You can add high capacity disk storage and main memory, line printers, visual display input systems, MICR document processing systems, and magnetic media including cassettes, tape, and industry compatible and Burroughs super mini-disks.

The B 800 Can Go To Work Soon After It Arrives In Your Office.

Productivity is rapidly achieved through Burroughs Business Management System application programs which are available now for a broad range of businesses. BMS programs further enhance the B 800's cost-effectiveness since they are available at a fraction of the cost of their development.

The B 800 Comes With Comprehensive Support Which Includes:

Operator training in B 800 operation and BMS application program implementation at Burroughs Customer Training Centers located in major cities throughout the world; professional installation and support; equipment maintenance; and specialized forms and supplies.

The B 800 Protects The Investment Of Current Burroughs Users.

B 800 and B 700 Systems are object code compatible. This provides "instant maturity" of system software and "instant transfer" of user application programs . . . and offers a cost-effective growth path to the expanded power, capacity and multiprogramming capability of the B 800.

The B 800 Offers Unparalleled Compatibility With Other Burroughs Systems To Facilitate Growth As Well As Distributed Processing Plans.

This is made possible through the Computer Management System (CMS), an integrated system of operating and application software. The B 800 CMS is compatible with the larger B 1800 and the smaller B 80 Systems without reprogramming. This assures an easy growth path PLUS continuity in business management for the user seeking increased power, or the multi-location organization seeking varying levels of computing power where transactions occur and management information is needed.

Burroughs Leadership Brings A Full Range Of Larger System Features And Advantages To This Small System Including:

- Master Control Program
- Multiprogramming
- Virtual Memory
- Interpreters
- 1 MHz or 2 MHz Microprogrammed Processors
- Up to 4 Data Communications Channels
- High Level Language Compilers (COBOL, RPG, Network Definition Language, Message Processing Language, Audit Entry Language)
- Data Control System and Utility Programs
- BMS® Business Management Systems

COMPATIBLE WITH THE FUTURE

Burroughs

Burroughs B 800 Financial Management Systems

B 800 Systems provide extensive MICR capabilities using either the high speed reader sorter or distributed S 1000 Series proof management systems.
