CCSYSTM-018-UM-00-A

CDRL AOOY

December 17, 1982

## REVISION RECORD

Document Number  
CCSYSTM-018-UM-00-A

## 1.0 INTRODUCTION

The Consolidated Communications System (CCS) User's Manual describes the user input in the form of operator commands and the user outputs in the form of displays, hardcopy, and dayfile messages to the CCS. The CCS run requirements are also described.

### 1.1 CCS Overview

As part of the Naval Weather Services, the Fleet Numerical Oceanographic Center (FNOC) in Monterey, California is the primary location for the generation, preparation, and transmission to various customers of meteorological and oceanographic data (products). The perishability of such products requires a responsive communications system, capable of adequately receiving and transmitting a wide variety of environmental products.

The CCS is defined to include all of the hardware and software which interfaces the processing tasks within the Information Processing System (IPS) environment to the user circuits which support communications circuits (AWN, ID50, NEDN, NEDN, and 200UT) over which data products are transmitted and received. It is bounded on one side by the files which are created by or for the application jobs (within the IPS), and on the other side by the GFE RS-232C patch panel through which products are transmitted or data is received.

The CCS software executing in the MP-32 is composed of several concurrently executing tasks which are described below.

- o Inter-Computer Network (ICN) - This software provides a method of communication between tasks that span physical mainframes.
- o CYBER Channel Coupler Link Driver (CCCLD) - This software interfaces with ICN on the MP-32 to the CYBER Channel Coupler Manager (CCCMGR) in MPX/OS, which handles the hardware interface to the IPS.

- o Network Manager (NM) - This software statuses the IPS computers and responds to IPS NM requests to maintain the ICN Machine Table and ICN Link Table.
- o Transfer Queue Processor (TQ) - This software creates CCS messages from IPS transmit files. It will also perform character translation during the transfer when requested.
- o Receive Queue Processor (RQ) - This software creates or adds CCS messages received from the remote circuits to either permanent or queue files on the IPS. This software will also perform character translation during the transfer when requested.
- o Queuer Process (Q) - This software stacks short messages received from a remote circuit into a single summed message and then releases that message to the CCS message traffic based on time or size. It will also perform character translation.
- o Message Routing Task (MRT) - This software directs the flow of message traffic through the CCS.
- o Protocol Formatting Modules (PA, PB, PC) - This software maps circuit format messages to CCS internal format messages and vice versa, and communicates with each circuit according to its specific protocol.
- o AWN Data Converter (AWNDC) - This software converts AWN Protocol outbound messages from ASCII to Baudot and AWN Protocol inbound messages from Baudot to either ASCII or binary.
- o System Operator Task (SOT) - This software interfaces with the Interactive Terminal Subsystem (ITS) to the CCS application to allow the operator to control message processing on the CCS.

## TABLE OF CONTENTS

## TABLE OF CONTENTS (Contd)

4.23	PA.SHORTSTAT, PB.SHORTSTAT, PC.SHORTSTAT - Short Form of PA.STATUS, PB.STATUS, PC.STATUS . . . . .	4-23
4.24	PA.STATUS, PB.STATUS, PC.STATUS - Status Display . . . . .	4-23
4.25	PA.STORE, PB.STORE, PC.STORE - Store Entity List on File . .	4-23
4.26	Q-Terminate Connection to SOT . . . . .	4-23
4.27	QU.STATUS - IPS Queued Status Display . . . . .	4-24
4.28	RQ.MMT - Change IPS File Mapping . . . . .	4-24
4.29	RQ.MSTATUS - Display IPS Mapping Status . . . . .	4-25
4.30	RQ.STATUS - Display IPS Receive Status . . . . .	4-26
4.31	TQ.STATUS - Display IPS Transmit Status . . . . .	4-27
5.0	MESSAGE EDITOR (MED) . . . . .	5-1
5.1	Top level MED Commands . . . . .	5-1
5.2	MED Commands for Creating Messages . . . . .	5-2
6.0	REPORT GENERATOR (RPGEN) . . . . .	6-1
7.0	DAYFILE MESSAGES . . . . .	7-1

## APPENDIXES

A	ABORT CODES . . . . .	A-1
B	MPX/OS USAGE SUMMARY . . . . .	B-1
C	VALID COMMAND INPUTS . . . . .	C-1
D	CCS BUILD CONSIDERATIONS . . . . .	D-1
E	DISPLAYS FOR PA, PB, AND PC COMMANDS . . . . .	E-1

## TABLES

4-1	SOT Operator Commands . . . . .	4-3
7-1	Dayfile Messages . . . . .	7-1

- o Message Editor (MED) - This software enables the CCS operator to interface with CCS message traffic.
- o Report Generator (RPGEN) - This software provides a utility for statistical summaries of dayfile messages.

O

O

### 3.0 RUNNING CCS

The following tasks must all be loaded and set into execution for the CCS. The ordered load of 1 and 2 are critical; otherwise, order is not important. All tasks can be initiated by entering the ]JOB ITS command where the tasks are as enumerated below.

1. ICN - Inter-Computer Network
2. MRT - Message Routing
3. LD - Link Driver
4. NM - Network Manager
5. TQ - Transmit to Circuit
6. RQ - Received from Circuit
7. Q - Queuer Process
8. PA - Protocol Formatting (NMC, ID50)
9. PB - Protocol Formatting (NEDN)
10. PC - Protocol Formatting (AWN)
11. AWNDC - AWN Protocol Data Converter
12. SOT - System Operator  
(lun 10 must be open to the SOTMSG.TXT file;  
lun 11 must be open to the SOTCMDS.TXT file.)

To run the Message Editor or Report Generator, the following tasks respectively must be loaded and set into execution:

13. MED - Message Editor
14. RPGEN - Report Generator

O

O

O

#### 4.0 CCS OPERATOR COMMAND AND DISPLAY

The user controls CCS message traffic and views CCS task status via the SOT program. Note that operating system status can be obtained using the OCF facility. (See the ITS Version 2 Reference Manual.)

The operator commands fall into three categories. The first category consists of the MR commands. These commands interact with the MRT task and provide the operator the ability to manipulate routing information such as destination, retention, and release time. The operator can also cause display of routing information with MR commands.

The second category comprises the PA, PB, and PC commands. These commands configure the circuits, on and off circuits, and display status of the configuration. The configuration is established in two steps: first creating an entity list (ELIST) via several editing commands for adding, deleting, and reading/writing MPX files for ELIST information, and then causing the ELIST to become the port configuration (PLIST) via BOOT commands. There are also displays of the ELIST and the PLIST. PA handles NMC and ID50 circuits; PB handles NEDN circuit; PC handles the AWN circuit. All aspects of PA and PB are handled separately (an ELIST for each and so forth). Examples in this manual are for PA only.

The third category consists of the Q commands. These commands display the status of message processing between the IPS and CCS. There is also a command for manipulation of IPS file characteristics for messages going to the IPS.

To initiate SOT, the user must be in the ICF facility and enter:

```
]JOB SOT  
]LINK SOT
```

The SOT task is a multi-user task that up to four terminals/users can use concurrently. The operator can terminate usage of SOT by entering the QUIT command. This command frees the terminal for other use.

After using another program, the user can re-link to SOT by entering:

]LINK SOT or ]KEEP SOT

The following are SOT Operator Messages that may appear at the terminal:

<u>Message</u>	<u>Meaning</u>
System Operator Task	Title when program starts up.
Illegal Operator Command.	Incorrect type-in.
Waiting for Response from Task.	Not ready for new type-in.
ICN message size error from ICNRECV.	Incorrect interaction of programs; contact analyst.
ICN send error.	Incorrect interaction of programs; contact analyst.
Task not available.	MRT, ICN, PA, PB, Q, TQ, or RQ not executing when needed.
Task error ICN Buffer incorrectly formatted.	Incorrect interaction of programs; contact analyst.
ICN receive error.	Incorrect interaction of programs; contact analyst.

Table 4-1 contains the list of CCS operator commands available via SOT.

TABLE 4-1. SOT OPERATOR COMMANDS

<u>Command</u>	<u>Description</u>
1 MR.ADM	Add Destination to Message
2 MR.CMR	Change Message Retention (time)
3 MR.CRT	Change Release Time (of message to a destination)
4 MR.DKD	Display Known Destinations
5 MR.DMD	Delete Message Destination
6 MR.DMI	Display Message Information (of an individual message)
7 MR.DML	Display Message List (various selection criteria)
8 MR.DMS	Display Message Statistics
9 MR.DUD	Display Unknown Destinations
10 PA.A, PB.A, PC.A	Add entity
11 PA.BOOT, PB.BOOT, PC.BOOT	Starts circuit on PA, PB, or PC
12 PA.BOOTPFM, PB.BOOTPFM, PB.BOOTPFM	Starts PA, PB, or PC
13 PA.CLRLIST, PB.CLRLIST, PC.CLRLIST	Clear entity list
14 PA.D, PB.D, PC.D	Delete entity
15 PA.DROP, PB.DROP, PC.DROP	Drop all circuits, terminates PA, PB, or PC
16 PA.ELIST, PB.ELIST, PC.ELIST	Entity list display
17 PA.LOAD, PB.LOAD, PC.LOAD	Load entity list from file
18 PA.MODE, PB.MODE, PC.MODE	Set mode field of entity
19 PA.OFF, PB.OFF, PC.OFF	Set off status for entity
20 PA.ON, PB.ON, PC.ON	Set on status for entity
21 PA.PLIST, PB.PLIST, PC.PLIST	Port List display
22 PA.R, PB.R, PC.R	Replace entity
23 PA.SHORTSTAT, PB.SHORTSTAT, PC.SHORTSTAT	Short form of PA.STATUS, PB.STATUS, or PC.STATUS
24 PA.STATUS, PB.STATUS, PC.STATUS	Status display
25 PA.STORE, PB.STORE, PC.STORE	Store entity list on file

TABLE 4-1. SOT OPERATOR COMMANDS (Contd)

<u>Command</u>	<u>Description</u>
26 Q	Terminate usage of SOT
27 QU.STATUS	IPS queued status display
28 RQ.MMT	Change IPS mapping
29 RQ.MSTATUS	IPS mapping status display
30 RQ.STATUS	IPS receive status display
31 TQ.STATUS	IPS transmit status display

#### 4.1 MR.ADM - Add Destination to Message

MR.ADM command adds a destination to an existing message. Destination names are not checked; a destination name not currently known causes the message to be included in the Unknown-Destination category. Message sequence number must be currently known.

MR.ADM,seqnum,destinationname,releasetime,priority

where:

seqnum 1- to 4-digit integer value specifying the sequence number

destinationname maximum 8 ASCII alphanumeric characters specifying the destination name (reference appendix C for current valid entries)

releasetime decimal digits in format DDHHMM for day, hour, and minute of release (optional; default is immediate release); a value greater than or equal to 320000 inhibits release

priority 1- to 5-digit integer value specifying the priority (optional)

Display Format:

Seq	Sec	Size	Ret	Fmt	Type	Destination/Release Time	yyymmddhhmmss
nnnn	s	11111	rrrr	ff	tt	destname/reltim	destname/reltim

where:

yyymmdd - date in the format year, month, day

yy-year

mm-month

dd-day

hhmmss - time in the format hours, minutes, seconds

hh-hours

mm-minutes

ss-seconds

nnnn - sequence number

s - security level

11111 - size in blocks

rrrr - retention time in minutes

ff - message format

tt - message type

destname - destination name

reftime - release time in the format hhmmss

hh-hours

mm-minutes

ss-seconds

Sample entry and response:

MR.ADM,0268,NMCSU

Seq Sec Size Ret Fmt Type Destination/Release Time 820909134922  
0268 0 00002 0030 AS MS AWNC /UNKWN NMCSU /UNKWN

#### 4.2 MR.CMR - Change Message Retention Time

MR.CMR changes the period of time that the message is to remain queued after transmission to the last destination.

MR.CMR,seqnum,retention

where:

seqnum 1- to 4-digit integer value specifying the sequence numbers

retention New retention time in minutes; integer value from 0 to 4096

Display Format:

Seq Sec Size Ret Fmt Type Destination/Release Time yyymmddhhmmss  
nnnn s 11111 rrrr ff tt destname/reltim destname/reltim destname/reltim

where:

yyymmdd - date in the format year, month, day

yy-year

mm-month

dd-day

hhmmss - time in the format hours, minutes, seconds

hh-hours

mm-minutes

ss-seconds

nnnn - sequence number

s - security level

11111 - size in blocks

rrrr - retention time in minutes

ff - message format

tt - message type

destname - destination name

reletim - release time in the format hhmmss

hh-hours

mm-minutes

ss-seconds

Sample entry and response:

MR.CMR,0268,20

Seq Sec Size Ret Fmt Type Destination/Release Time 820909140445  
0268 0 00002 0020 AS MS AWNC /UNKWN NMCSU /UNKWN

#### 4.3 MR.CRT - Change Release Time

MR.CRT changes the time at which the message is released for transmission to the destination specified.

MR.CRT,seqnum,destinationname,releasetime

where:

seqnum 1- to 4-digit integer value specifying the sequence number

destinationname maximum 8 ASCII alphanumeric characters specifying the destination name (reference appendix C for current valid entries)

releasetime decimal digits in format DDHHMM for day, hour, and minute of release; a value of 000000 causes immediate release; a value greater than or equal to 320000 presents release

Display Format:

Seq Sec Size Ret Fmt Type Destination/Release Time yyymmddhhmmss  
nnnn s lllll rrrr ff tt destname/reltim destname/reltim destname/reltim

where:

yyymmdd - date in the format year, month, day

yy-year

mm-month

dd-day

hhmmss - time in the format hours, minutes, seconds

hh-hours  
mm-minutes  
ss-seconds

nnnn - sequence number

s - security level

11111 - size in blocks

rrrr - retention time in minutes

ff - message format

tt - message type

destname - destination name

reftime - release time in the format hhmmss

hh-hours  
mm-minutes  
ss-seconds

Sample entry and response:

MR.CRT,0268,NMCSU,20000

Seq	Sec	Size	Ret	Fmt	Type	Destination/Release Time	820909140059
0268	0	00002	0030	AS	MS	AWNC /UNKWN	NMCSU /UNKWN

#### 4.4 MR.DKD - Display Known Destinations

MR.DKD causes display of a header and up to 22 lines of known destinations. These destinations are grouped by Destination Group Name. If destinationgroupname is specified, the display will begin with that Destination Group.

MR.DKD,destinationgroupname

where:

**destinationgroupname** maximum 8 alphanumeric characters specifying the destination group name (reference appendix C for current valid entries) (optional)

### Display Format:

where: gggggggg - destination group name  
xxxxxxxxx - destination name

### Sample entry and response:

#### 4.5 MR.DMD - Display Message Destination

MR.DMD removes the specified destination from the message specified.

MR.DMD.seqnum.destinationname

where:

**seqnum** 1- to 4-digit integer value specifying the sequence number

**destinationname** maximum 8 ASCII alphanumeric characters specifying the destination name (reference appendix C for current valid entries)

### Display Format:

Seq	Sec	Size	Ret	Fmt	Type	Destination/Release	Time	yyymmddhhmmss
nnnn	s	11111	rrrr	ff	tt	destname/reltim	destname/reltim	destname/reltim

where:

yyymmdd - date in the format year, month, day

yy-year

mm-month

dd-day

hhmmss - time in the format hours, minutes, seconds

hh-hours

mm-minutes

ss-seconds

NNNN - sequence number

S - security level

11111 - size in blocks

RRRR - retention time in minutes

FF - message format

TT - message type

Destname - destination name

Reletim - release time in the format hhmmss

hh-hours

mm-minutes

ss-seconds

Sample entry and response:

MR.DMD,0268,NMCSU

Seq	Sec	Size	Ret	Fmt	Type	Destination/Release Time	820909140558
0268	0	00002	0020	AS	MS	AWNC /UNKWN	

#### 4.6 MR.DMI - Display Message Information

MR.DMI causes message information about an individual message to be displayed.

MR.DMI,seqnum

where:

seqnum 1- to 4-digit integer value specifying the sequence number of the message

Display Format:

Circuit Station Receipt Jobname Date/Time  
ccccc sssss ddhhmm jjjjjj yyymmddhhmm

Message Id: xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx

Initial Destinations:

Dest Pri Release MDL Product  
ddddd pppp ddhhmm mmmmm rrrrr

Current Information:

Seq	Sec	Size	Ret	Fmt	Type	Destination/Release Time	yyymmddhhmmss
nnnn	s	lllll	rrrr	ff	tt	sinkname/reltim	sinkname/reltim
						sinkname/reltim	sinkname/reltim
						sinkname/reltim	sinkname/reltim

where:

ccccc - circuit name

sssss - station name

ddhhmm - time of receipt of message in format day,  
hours, minutes

dd - day

hh - hours

mm - minutes

jjjjjjjj - job name identifier

yyymmddhhmm - date and time in format year, month, day, hours, minutes

yy - year

mm - month

dd - day

hh - hours

mm - minutes

xx....xx - message id

ddddd - destination name

pppp - priority

ddhhmm - release time in format days, hours, minutes

dd - days

hh - hours

mm - minutes

mmmmmm - MDL

rrrrr - product

nnnn - sequence number

s - security level

11111 - size in blocks

rrrr - retention time in minutes

ff - message format

tt - message type

sinkname - sink (destination) name

reltim - release time in the format hhmmss

hh-hours

mm-minutes

ss-seconds

Sample entry and response:

MR.DMI,0268

Circuit Station Receipt Jobname Date/Time  
AWNO AWNO 451844 AWNO 451617

Message Id:

Initial Destinations:

Dest	Pri	Release	MDL	Product
AWNC	0000	0000		

**Current Information:**

Seq	Sec	Size	Ret	Fmt	Type	Destination/Release Time	820909135525
0268	0	00002	0030	AS	MS	AWNC /UNKWN	NMCSU /UNKWN

**4.7 MR.DML - Display Message List**

MR.DML causes a header and 22 lines of message information to be listed on the screen. Only messages meeting the criteria (ALL, HOLD, XMIT, etc.) will be displayed. If seqnum is nonzero, then display will begin with the message of the given sequence number. If destinationgroupname is included, then only messages queued to the specified Destination Group will be displayed.

```
MR.DML [,seqnum][,ALL][,destinationgroupname]
      [,HOLD]
      [,XMIT]
      [,WAIT]
      [,RET]
      [,UNKWN]
```

where:

seqnum	1- to 4-digit integer value specifying the sequence number (optional)
destinationgroupname	maximum 8 alphanumeric characters specifying the destination group name (reference appendix C for current valid entries); if not specified, all destination groups are displayed
ALL	display all destinations in group
HOLD	display all destinations in group in Hold Queue
XMIT	display all destinations in group in Transmit Queue
WAIT	display all destinations in group in Wait Queue
RET	display all destinations in group in Retention Queue
UNKWN	display all destinations in group in destinations not being processed by CCS

Display Format:

```
Seq Sec Size Ret Fmt Type Destination/Release Time yymmddhhmmss  
nnnn s 11111 rrrr ff tt destname/reltim destname/reltim destname/reltim
```

where:

yymmdd - date in the format year, month, day

yy-year

mm-month

dd-day

hhmmss - time in the format hours, minutes, seconds

hh-hours

mm-minutes

ss-seconds

nnnn - sequence number

s - security level

11111 - size in blocks

rrrr - retention time in minutes

ff - message format

tt - message type

destname - destination name

reletim - release time in the format hhmmss

hh-hours

mm-minutes

ss-seconds

Sample entry and response:

MR.DML,0268,ALL

Seq	Sec	Size	Ret	Fmt	Type	Destination/Release	Time	
0268	0	00002	0030	AS	MS	AWNC	/UNKWN	820909135714

#### 4.8 MR.DMS - Display Message Statistics

MR.DMS causes generation of a Message Statistics Display.

MR.DMS

Display Format:

Description	Number	%Max	Disk Blocks	%Max	yyymmddhhmmss
Total-Msgs	nnnn	mmm	bbbbbb	mmm	
Ret-Msgs	nnnn		bbbbbb	mmm	
Unk-Dest-Msgs	nnnn		bbbbbb	mmm	
Msg/Dest Links	nnnn	mmm	-	-	
Destinations	nnnn	mmm	-	-	

Max Disk Blocks = ddddd      Unused GC space = uuuuu

where:

yyymmdd - date in the format year, month, day

  yy - year

  mm - month

  dd - day

hhmmss - time in the format hours, minutes, seconds

  hh - hours

  mm - minutes

  ss - seconds

nnnn - number of messages

mmm - percentage used of maximum available

bbbbbb - disk blocks allocated for messages

dddddd - maximum number of disk blocks

uuuuuu - unused global common space

Sample entry and response:

#### MR.DMS

Description	Number	%Max	Disk Blocks	%Max	
Total-Msgs	0026	013	00073	002	
Retained-Msgs	0000		00000	000	
Unk-Dest-Msgs	0025		00071	002	
Msg/Dest Links	0034	007			
Destinations	0013	010			

Max Disk Blocks = 03000      Unused GC space = 02567

#### 4.9 MR.DUD - Display Unknown Destinations

MR.DUD causes display of a header and up to 22 lines of information about messages that cannot currently be delivered to their stated destinations. If destinationname is specified, the display will begin with that destination.

MR.DUD,destinationname

where:

destinationname maximum 8 ASCII alphanumeric characters specifying the destination name (optional) (reference to appendix C for current valid entries)

Display Format:

Dest.      Message Sequence Numbers

xxxxx      nnnn nnnn nnnn nnnn nnnn .... nnnn

where:

xxxxx - destination name

nnnn - message sequence number

Sample entry and response:

MR.DUD  
Dest. Message Sequence Numbers

NMCSU 0241  
OPRMSG 1607 1612  
NMCDATA 1647

4.10 PA.A, PB.A, PC.A - Add Entity

PA.A, PB.A, PC.A adds a new entity specification at the end of the Entity Name List. Returns Entity Name List display to operator. (See appendix E.)

PA.A, name, type, stat, mode, security, subname

where:

name entity name; maximum 8 alphanumeric characters  
type protocol: NEDN, NEDS, AWN, ID50, NMC  
stat port status: ON, OFF  
mode for type NEDN: A - wait and send to NEDS when they are all online  
B - send to all NEDS; those offline will lose the message  
C - send to available NEDS now; wait and send to others when available  
for type AWN: D - double buffer  
S - single buffer  
ignored for other types (NEDS, ID50, NMC)  
security integer value 0 to 255  
subname subordinate entity name; must be entity to which entity is subordinate

4.11 PA.BOOT, PB.BOOT, PC.BOOT - Starts Circuit

PA.BOOT, PB.BOOT, PC.BOOT terminates circuit tasks for a specified port at first opportunity afforded by the protocol. Rebuilds Port List entry for specified port. Initiates circuit tasks for specified port. Returns Port List display to operator. (See appendix E.)

PA.BOOT, port

where:

port                  port number; integer value

4.12 PA.BOOTPFM, PB.BOOTPFM, PC.BOOTPFM - Start PA, PB, or PC

PA.BOOTPFM, PB.BOOTPFM, PC.BOOTPFM terminates all active circuit tasks at the first opportunity afforded by each protocol. Builds Port List from entity Name List. Initiates circuit tasks. Returns Port List display to operator. (See appendix E.)

PA.BOOTPFM

4.13 PA.CLRLIST, PB.CLRLIST, PC.CLRLIST - Clear Entity List

PA.CLRLIST, PB.CLRLIST, PC.CLRLIST clears Entity Name List to empty. Returns an empty Entity Name List display to operator. (See appendix E.)

PA.CLRLIST

4.14 PA.D, PB.D, PC.D - Delete Entity

PA.D, PB.D, PC.D deletes an entity specification from the Entity Name List. Returns Entity Name List display to operator. (See appendix E.)

PA.D,ord

where:

ord      ordinal number (ELIST entry number); integer value

4.15 PA.DROP, PB.DROP, PC.DROP - Drop All Circuits on PA, PB, or PC

PA.DROP, PB.DROP, PC.DROP terminates all circuit tasks at the first opportunity afforded by each protocol. Terminates the OPER task of PFM. If no other tasks are active, PFM will terminate as an MPX/OS task.

PA.DROP

4.16 PA.ELIST, PB.ELIST, PC.ELIST - Entity List Display

PA.ELIST, PB.ELIST, PC.ELIST returns Entity Name List display to operator.  
(See appendix E.)

PA.ELIST

4.17 PA.LOAD, PB.LOAD, PC.LOAD - Load Entity List From File

PA.LOAD, PB.LOAD, PC.LOAD loads specified file (fn) containing specifications for entities. Appends file of entities to Entity Name List. Returns Entity Name List display to operator. (See appendix E.)

PA.LOAD,fn,owner,ed,acc

where:

fn      MPX/OS file name

owner    MPX/OS file owner

ed      MPX/OS file edition

acc      MPX/OS file access key

#### 4.18 PA.MODE, PB.MODE, PC.MODE - Set Entity Mode

PA.MODE, PB.MODE, PC.MODE sets the mode field of the named entity in the Port List to the specified value (mode). This change of mode will take place automatically at the first opportunity afforded by the protocol without the necessity of BOOTing the port. Returns the Status Display to the operator. (See appendix E.)

PA.MODE,name,mode

where:

name	entity name
mode	for type NEDN: A - wait and send to NEDS when they are all online
	B - send to ALL NEDS; those offline will lose the message
	C - send to available NEDS now; wait and send to others when available
	for type AWN: D - double buffer
	S - single buffer

#### 4.19 PA.OFF, PB.OFF, PC.OFF - Set Entity to OFF

PA.OFF, PB.OFF, PC.OFF sets the status field of the named entity in the Port List to OFF. This change will take place automatically at the first opportunity afforded by the protocol without the necessity of BOOTing the port. Returns the Status Display to the operator. (See appendix E.)

PA.OFF,name

where:

name	entity name
------	-------------

4.20 PA.ON, PB.ON, PC.ON - Set Entity to ON

PA.ON, PB.ON, PC.ON sets the status field of the named entity in the Port List to ON. This change will take place automatically at the first opportunity afforded by the protocol without the necessity of BOOTing the port. Returns the Status Display to the operator. (See appendix E.)

PA.ON,name

where:

name      entity name

4.21 PA.PLIST, PB.PLIST, PC.PLIST - Display Port List

PA.PLIST, PB.PLIST, PC.PLIST returns Port List display to operator. (See appendix E.)

PA.PLIST

4.22 PA.R, PB.R, PC.R - Replace Entity

PA.R, PB.R, PC.R replaces the entity specification at the specified ordinal (ord) with the new specification. Returns the Entity Name List display to the operator. (See appendix E.) If the specified ordinal is not found, then this command has no effect.

PA.R,ord,name,type,stat,port,security,subname

where:

ord      ordinal number (ELIST entry number); integer value

name      entity name

type      protocol: NEDN, NEDS, AWN, ID50, NMC

stat      port status: ON, OFF

port      port number; integer value 0 to 54

security      integer value 0 to 255

subname      subordinate entity name; must be entity to which name is subordinate

4.23 PA.SHORTSTAT, PB.SHORTSTAT, PC.SHORTSTAT - Short Form of PA.STATUS, PB.STATUS, PC.STATUS

PA.SHORTSTAT, PB.SHORTSTAT, PC.SHORTSTAT returns short form of the PA.STATUS, PB.STATUS, or PC.STATUS Display, including station and status only, to the operator. (See appendix E.)

PA.SHORTSTAT

4.24 PA.STATUS, PB.STATUS, PC.STATUS - Status Display

PA.STATUS, PB.STATUS, PC.STATUS returns the Status Display to the operator. (See appendix E.)

PA.STATUS

4.25 PA.STORE, PB.STORE, PC.STORE - Store Entity List on File

PA.STORE, PB.STORE, PC.STORE saves the Entity Name List on the specified file. Returns Entity Name List display to operator.

PA.STORE,fn,owner,ed,acc

where:

fn	MPX/OS file name
owner	MPX/OS file owner
ed	MPX/OS file edition
acc	MPX/OS file access key

4.26 Q - Terminate Connection to SOT

Q terminates connection to SOT.

Q

4.27 QU.STATUS - IPS Queued Status Display

QU.STATUS

QU.STATUS displays status of messages processed by Q. These messages are the ones summed into a larger message for transmittal to the IPS.

ORD	SINKNAME	TIME	MESSAGE SIZE	
			TX	CUR
			TRANSMIT	CURRENT
00	nnnnnn	tt	cc	ssssss 111111

where:

00 - ordinal number  
nnnnn - sink name  
tt - transmit time  
cc - current time  
sssss - transmit message size  
111111 - current message size

Sample display:

ORD	SINKNAME	TIME	MESSAGE	SIZE
			TX	CUR
			TRANSMIT	CURRENT
1	AWNRAW	15	7	200000 100000

4.28 RQ.MMT - Change IPS File Mapping

RQ.MMT changes the IPS File for the ordinal selected. There is one ordinal and one filename associated with a destination (sink) at any given time.

RQ.MMT, ORD=nn, FT=[PF,QF,QU], LFN=fff, ID=ii, CN=ccc, MD=mmm, RD=rrr, RP=retention, MF=xxx.

where:

nn	integer 1 to 20; current valid values in RQ.MSTATUS
fff	up to 28 alphanumeric characters; IPS filename
ii	2 alphanumeric characters; IPS catalog id
ccc	8 alphanumeric characters; IPS control password for fff
mmm	8 alphanumeric characters; IPS modify password for fff
PF	to permanent file fff
QU	to Queue file fff
QF	to Queue file where 3 characters are from fff, last 4 characters are from HHMM
rrr	8 alphanumeric characters; IPS read password for fff
retention	minutes; integer value from 0 to 4096
xxx	mainframe; 3 alphanumeric characters. Current valid values: BON, CLY, SPC, HAL, DLA

#### 4.29 RQ.MSTATUS - Display IPS Mapping Status

RQ.MSTATUS displays status of IPS receive files.

RQ.MSTATUS

Display format:

ORD	MF	SINKNAME	TYPE	FILENAME	ID	RP	READ	CONTROL	MODIFY	EXTEND
oo	mmm	sssssss	tt	ffffffffffff	ii	ppp	rrrrrrrr	cccccccc	xxxxxxxx	eeeeeeee
.	.	.	.	.	.	.	.	.	.	.
.	.	.	.	.	.	.	.	.	.	.
.	.	.	.	.	.	.	.	.	.	.
oo	mmm	sssssss	tt	ffffffffffff	ii	ppp	rrrrrrrr	cccccccc	xxxxxxxx	eeeeeeee

where:

oo - ordinal number  
 mmm - mainframe (BON, CLY, SPC, HAL, DLA)  
 sssssss - sink name  
 tt - type (PF - permanent file, QU - queue file)  
 ffffffffffffff - Filename  
 ii - file id  
 rp - repeat count  
 rrrrrrrr - read file password  
 cccccccc - control file password  
 xxxxxxxx - modify file password  
 eeeeeeee - extend file password

Sample display:

ORD	MF	SINKNAME	TYPE	FILENAME	ID	RP	READ	CONTROL	MODIFY	EXTEND
10	BON	NMCDATA	PF	THISISAFAIRLYL ZW 999	PWREADIN	PWCONTRL	PWMODIFY	PWEXTEND		
				ONGFILENAMETO0						
11	CLY	AWNDATA	PF	NOTSOLONALFN	NP 099	PWREADAW	PWCONAWN	PWMODAWN	AWN	
12	BOL	ARQDATA	PF	SHORTFILE	NP 010	PLD	BLUE	ORANGE	YELLOW	
13	SPC	ID50DATA	QU	RXQHHMM						

#### 4.30 RQ.STATUS - Display IPS Receive Status

RQ.STATUS displays status of each IPS destination (sink).

#### RQ.STATUS

Display format:

MF	ST	SINKNAME	MESSAGE NAME	SL	SIZE	RP
fff	t	nnnnnnnn	mmmmmmmmmmmm	1	sssss	rrr
.	.	.	.	.	.	.
.	.	.	.	.	.	.
fff	t	nnnnnnnnnn	mmmmmmmmmmmm	1	sssss	rrr

where:

fff - mainframe (BON, CLY, SPC, HAL, DLA)  
 t - status  
 nnnnnnnn - sink name  
 mmmmmmmmmmmmm - message name  
 l - sink length  
 ssss - message size  
 rrr - repeat

Sample display:

MF	ST	SINKNAME	MESSAGE NAME	SL	SIZE	RP
BON	A	AWNDATA	QUEUED..0134	4	700	4
CLY	C	NMCDATA	QUEUED..1401	0	4000	4
SPC	D	NEDNDATA	QUEUED..1200	2	200	6
HAL	F	ID50DATA	QUEUED..0101	6	2050	10
DLA	H	ARQDATA	QUEUED..0225	3	10	2

#### 4.31 TQ.STATUS - Display IPS Transmit Status

TQ.STATUS displays status of IPS transmit files.

TQ.STATUS,xxx

where:

xxx mainframe; 3 alphanumeric characters; if not specified, all mainframes are displayed.

Current valid values: BON, CLY, SPC, HAL, DLA

Display format:

MF	ST	FILE	FNT	SL	CRP	PRI	SIZE
mmm	t	fffffff	nnnn	l	ccc	pp	ssss
.	.	.	.	.	.	.	.
.	.	.	.	.	.	.	.
.	.	.	.	.	.	.	.
mmm	t	fffffff	nnnn	l	ccc	pp	ssss

where:

mmm - mainframe (BON, CLY, SPC, HAL, DLA)  
 t - status  
 ffffffff - filename  
 nnnn - FNT entry address

1 - sink length  
ccc - CYBER repeat  
pp - priority  
ssss - size

Sample display for TQ.STATUS:

MF	ST	FILE	FNT	SL	CRP	PRI	SIZE
BON	A	FILE007	4342	1	896	7	7777
CLY	C	FILE001	4444	5	700	6	6012
HAL	F	FILEABE	4134	0	800	7	100
SPC	G	FILE1	4702	1	110	1	100

Sample display for TQ.STATUS,xxx:

MF	ST	FILE	FNT	SL	CRP	PRI	SIZE
XXX	G	FILEAAA	4304	5	200	7	400
		FILEB	4400	4	200	7	500
		FILE002	4144	1	100	5	100
		FILE001	4147	1	300	2	1000
		FILE010	4301	1	70	1	100
		FILE011	4212	3	250	1	400

## 5.0 MESSAGE EDITOR (MED)

The Message Editor (MED) provides the operator with an interface to receive and send message traffic.

The ITS command under ICF facility to run MED is:

]JOB MED

### 5.1 Top Level MED Commands

After getting into MED, there is a choice of top level commands as described in this section.

RCV - receives a message that was destined to MED by a task or the operator.

RCV,seqnum

where:

seqnum a message sequence number

NEW - creates a new message.

NEW

READ - reads the file specified and associated CX edition of the same filename for context (if any) and initializes the message with the contents of the file, binary or alpha, as specified in the file header. The file must reside under owner MED.

READ filename

where:

filename an MPX filename

Q - quit MED.

## 5.2 MED Commands for Creating Messages

After proper entry of top level commands RCV, NEW, or READ, any of the following commands can be used.

CX - context viewing or changing.

Syntax:

CX

After entering the CX command, the following commands can be used to view and/or change the context:

s,level	set security level; 0 to 7
l,len	set length of message in bits
r,retain	set retention period in minutes
d,dest	set destination name
p,prior	set priority; integer
t,time	set time of release; ddhhmm integer value
i,pid	set product id; 8 alphanumeric characters
n	position to next destination.
nd	delete destination
na,dest	append destination
n\$	position to last destination
nI	position to Ith destination
q	quit context viewing and changing, back to FA, CX, and so forth, level of commands

After each entry of a new value the global context and the current destination values are redisplayed.

Defaults for values are level=0,len=0,retain=0,d=no default,  
prior=0,time=0,pid=0.

FA - freeform alpha input, user is then in a mini editor to enter text.

Syntax:

FA,len

where:

len length of message in characters

The editing commands for FA are:

- A - for adding new lines; enter text then a line with a period in column 1
- D - delete last line in buffer
- L - list entire buffer
- Q - quit editing portion, back to FA, CX, etc., level of commands.

CA - MED creates a canned message of the length (in characters) specified with the one character repeated (the character cannot be a carriage return).

Syntax:

CA,len,char

where:

len length of message in characters

char one ASCII character

IA - MED creates a canned message of the length (in characters) specified with the one character incremented (7-bit ASCII) with rollover (the character cannot be a carriage return).

Syntax:

IA,len,char

where:

len length of message in characters

char one ASCII character

CB - MED creates a canned message of the length (number of values) specified with the hex or binary digits repeated.

Syntax:

CB,len,val

where:

len length of message (number of repetitions of val)

val hexadecimal or binary digits (B for binary)

IB - MED creates a canned message of the length (number of values) specified with the hex or binary value incremented by one with rollover.

Syntax:

IB,len,val

where:

len length of message (number of repetitions of val)

val hexadecimal or binary digits (B for binary)

SV - The message content currently being edited by MED is saved in the file. The context is saved in a companion file with the same name, except the edition is CX. The user is prompted for overwrite Y/N if files already exist. The file is saved under owner MED.

Syntax:

SV,filename

where:

filename MPX filename

SN - Send the message. The context must be appropriate or the MED will not send and will display an error message.

Syntax:

SN

## 6.0 REPORT GENERATOR (RPGEN)

The Journal Report Generator is a FORTRAN utility that will obtain and generate statistics oriented towards day reports and problem analysis.

The Report Generator produces a statistical report profiling the specified time span and system dayfile input. This is accomplished by obtaining those dayfile entries containing relevant information as identified by the CODE field of the dayfile entry. An analysis of these dayfile entries is then performed resulting in a report which can be output to a hard or soft copy device.

Calling Sequence:

\*RPGEN ( $P_1, P_2, \dots, P_n$ )

where:

$P_i$  is any of the following in any order:

I = Lu      Input file from logical unit Lu. Default is the system dayfile.

L = Lul/Lu2      Output file(s) to logical unit Lul or to an optional logical unit Lu2. Default is logical unit 63.

T1 = hh      Start time for extractor, hour, integer 0 to 23.  
Default is beginning of dayfile.

T2 = hh      Stop time for extractor.  
Default is end of dayfile, hour, integer 0 to 23.

TH      Extract throughput rates at hourly intervals. \*

EH      Extract effective throughput rates at hourly intervals (TH-RH). \*

RH      Extract retransmission rates at hourly intervals. \*

TO      Compute overall throughput rates. \*

TR            Compute options TH, EH, RH, and TO. \*

RE            Produce error summary. \*

CI            Extract circuit traffic, summary from dayfile  
access codes TX, TA, RX, and RA. \*

CE            Extract circuit traffic, expanded. \*

AC            Extract accounting information. \*

SA            Extract and list security access attempts. \*

ER            Extract error summaries. \*

\* Default extraction options = all.

Dayfile messages extracted by code: (IEAA)

Identification (I)

R            RNCI dayfile message.

Event (E)

S            Status dayfile message.

Action (AA)

TX            CCS successful transmission.

TA            CCS abort transmission.

RX            CCS successful receipt of message.

RA            CCS abort receipt of message.

RT            Bits retransmitted this past hour.

RN            Number of bits retransmitted this past hour.

TP            Number of bits transmitted this past hour.

AC            Accounting information for this circuit.

SL            Security activity on this circuit.

PE            Circuit processing errors.

ER            Processing errors.

<u>Input Option</u>	<u>Dayfile Action Code Used</u>	<u>Description</u>
AC	AC	A listing of all accounting information by circuit.

Sample output:

#### ACCOUNTING INFORMATION

##### CIRCUIT

NMC	All dayfile messages with code RSAC for NMC
AWNO	All dayfile messages with code RSAC for AWNO
AWNC	All dayfile messages with code RSAC for AWNC
NEDNE	All dayfile messages with code RSAC for NEDNE
NEDNW	All dayfile messages with code RSAC for NEDNW
NEDNL	All dayfile messages with code RSAC for NEDNL
ID50	All dayfile messages with code RSAC for ID50

<u>Input Option</u>	<u>Dayfile Action Code Used</u>	<u>Description</u>
CE	TX,TA,RX,RA	A listing by circuit of all circuit traffic by the dayfile action code.

Sample output:

#### CIRCUIT TRAFFIC

##### CIRCUIT

NMC	All dayfile messages with code RSTx for NMC
AWNO	All dayfile messages with code RSTx for AWNO
AWNC	All dayfile messages with code RSTx for AWNC
NEDNE	All dayfile messages with code RSTx for NEDNE
NEDNW	All dayfile messages with code RSTx for NEDNW
NEDNL	All dayfile messages with code RSTx for NEDNL
ID50	All dayfile messages with code RSTx for ID50

<u>Input Option</u>	<u>Dayfile Action Code Used</u>	<u>Description</u>
CT	TX,TA,RX,RA	A summary of all circuit traffic. CT will give the number of transactions for each circuit by the dayfile action code.

Sample output:

#### CIRCUIT TRAFFIC SUMMARY

CIRCUIT	ACTION CODE	NUMBER
NMC	TX	NN
AWNO	TX	NN
AWNC	TX	NN
NEDNE	TX	NN
NEDNW	TX	NN
NEDNL	TX	NN
ID50	TX	NN
NMC	TA	NN
AWNO	TA	NN
AWNC	TA	NN
NEDNE	TA	NN
NEDNW	TA	NN
NEDNL	TA	NN
ID50	TA	NN
NMC	RX	NN
AWNO	RX	NN
AWNC	RX	NN
NEDNE	RX	NN
NEDNW	RX	NN
NEDNL	RX	NN
ID50	RX	NN
NMC	RA	NN

AWNO	RA	NN
AWNC	RA	NN
NEDNE	RA	NN
NEDNW	RA	NN
NEDNL	RA	NN
ID50	RA	NN

<u>Input Option</u>	<u>Dayfile Action Code Used</u>	<u>Description</u>
EH	TP, RN	Effective throughput rate at hourly intervals (TH-RH).

Sample output:

#### EFFECTIVE THROUGHPUT RATE

CIRCUIT	HOUR	BIT TRANS. (10 thousands)
NMC	hh	NNNNN
AWNO	hh	NNNNN
AWNC	hh	NNNNN
NEDNE	hh	NNNNN
NED NW	hh	NNNNN
NEDNL	hh	NNNNN
ID50	hh	NNNNN

<u>Input Option</u>	<u>Dayfile Action Code Used</u>	<u>Description</u>
ER	ER	A listing of all system processing errors (excluding RNCI errors).

Sample output:

## PROCESSING ERRORS

## CIRCUIT

NMC	All dayfile messages with code RSER for NMC
AWNO	All dayfile messages with code RSER for AWNO
AWNC	All dayfile messages with code RSER for AWNC
NEDNE	All dayfile messages with code RSER for NEDNE
NEDNW	All dayfile messages with code RSER for NEDNW
NEDNL	All dayfile messages with code RSER for NEDNL
ID50	All dayfile messages with code RSER for ID50

<u>Input Option</u>	<u>Dayfile Action Code Used</u>	<u>Description</u>
RE	PE	CIRCUIT error summary. A listing of all CIRCUIT type errors.

Sample output:

## CIRCUIT ERRORS

## CIRCUIT

NMC	All dayfile messages with code RSPE for NMC
AWNO	All dayfile messages with code RSPE for AWNO
AWNC	All dayfile messages with code RSPE for AWNC
NEDNE	All dayfile messages with code RSPE for NEDNE
NEDNW	All dayfile messages with code RSPE for NEDNW
NEDNL	All dayfile messages with code RSPE for NEDNL
ID50	All dayfile messages with code RSPE for ID50

<u>Input Option</u>	<u>Dayfile Action Code Used</u>	<u>Description</u>
RH	RN	Retransmission rates at hourly intervals for each circuit. The rate is the number of bits transmitted per hour.

Sample output:

#### RE TRANSMISSION RATE

CIRCUIT	HOUR	BIT TRANS. (10 thousands)
NMC	hh	NNNN
AWNO	hh	NNNN
AWNC	hh	NNNN
NEDNE	hh	NNNN
NED NW	hh	NNNN
NEDNL	hh	NNNN
ID50	hh	NNNN

<u>Input Option</u>	<u>Dayfile Action Code Used</u>	<u>Description</u>
SA	SL	A listing of the dayfile message for each security access attempt.

Sample output:

#### SECURITY ACCESS ATTEMPTS

CIRCUIT	
NMC	All dayfile messages with code RSSL for NMC
AWNO	All dayfile messages with code RSSL for AWNO
AWNC	All dayfile messages with code RSSL for AWNC
NEDNE	All dayfile messages with code RSSL for NEDNE

NEDNW All dayfile messages with code RSSL for NEDNW  
 NEDNL All dayfile messages with code RSSL for NEDNL  
 ID50 All dayfile messages with code RSSL for ID50

<u>Input Option</u>	<u>Dayfile Action</u>	<u>Description</u>
	<u>Code Used</u>	
TH	TP	Throughput rates at hourly intervals for each circuit. The rate is the number of bits transmitted per hour.

Sample output:

#### THROUGHPUT RATE

CIRCUIT	HOUR	BIT TRANS. (10 thousands)
NMC	hh	NNNNN
AWNO	hh	NNNNN
AWNC	hh	NNNNN
NEDNE	hh	NNNNN
NED NW	hh	NNNNN
NEDNL	hh	NNNNN
ID50	hh	NNNNN

<u>Input Option</u>	<u>Dayfile Action Code Used</u>	<u>Description</u>
TO	TP	Overall throughput rate for each circuit of bits transmitted during the entire period of record.

Sample output:

OVERALL THROUGHPUT RATE

CIRCUIT	PERIOD	BIT TRANS. (10 thousands)
NMC	hh <sub>1</sub> -hh <sub>2</sub>	NNNNN
AWNO	hh <sub>1</sub> -hh <sub>2</sub>	NNNNN
AWNC	hh <sub>1</sub> -hh <sub>2</sub>	NNNNN
NEDNE	hh <sub>1</sub> -hh <sub>2</sub>	NNNNN
NEDNW	hh <sub>1</sub> -hh <sub>2</sub>	NNNNN
NEDNL	hh <sub>1</sub> -hh <sub>2</sub>	NNNNN
ID50	hh <sub>1</sub> -hh <sub>2</sub>	NNNNN
TOTAL	hh <sub>1</sub> -hh <sub>2</sub>	NNNNN

## 7.0 DAYFILE MESSAGES

Dayfile messages for CCS applications are shown in table 7-1. Dayfile messages have a 4-character code followed by the message text.

TABLE 7-1. DAYFILE MESSAGES

<u>Program</u>	<u>Dayfile Code</u>	<u>Message</u>
TQ	RTAB	xx = illegal state in TQ, event = yy
	RTIN	ICN timeout message - mf skipped
	RTIN	mf = mmmm, state = yy
	RTIN	State processed
	RTIN	Ill-formatted ICN read response
	RTIN	No trailing data header byte
	RTIN	lfn = xxxxxxxx, fnt = ffff, possibly locked on mf - mmmm
	RTIN	Invalid keyword = nnnnnnnnnn
	RTIN	EOx after file header read
	RTIN	Ill-formatted TQ file . EOx = nn
RQ	RRIN	Invalid BSRB status = xx, fd = xxxx while reading m.c.r.
	RRIN	ICN PF attach error = xx
	RRIN	PF error = xx
	RRIN	Catalog request
	RRIN	Extend request
Q	RQIN	ICN timeout occurred - request reissued
	RQIN	ICN timeout occurred - request reissued
NM	RNIN	LTO in EST is greater than max valid LTE
	RNIN	LTO in EST = xx and LTE = nn do not match
	RNIN	Ill-formatted NM update from mn - xx

TABLE 7-1. DAYFILE MESSAGES (Contd)

<u>Program</u>	<u>Dayfile Code</u>	<u>Message</u>
ICNSUBS		ICN not responding (via CTOI)
ICN	ICAB	Global common assign error = xx
	ICAB	Too few pages assigned in gc
	ICAB	ICN could not get global common
	ICAB	INIT defevtq failed
MRT	RMOD	* I Message Queued (Relates Message Context Information to CCS Message Sequence Number)
	RMRO	* Message Requeued (message recovery)
	RMTX	* Message Transmitted to Destination
	RMDD	* Operator deleted Destination from Message
	RMDA	* Operator added Destination to Message
	RMTD	* Message has Timed Out after transmission (Retention expired)
	RMER	* Error in MRT function encountered

\* Message formats shown in text.

MRT has special message formats shown below:

MRT Dayfile Message Format for dayfile code RMER:

0        1        2        2  
1234567890123456789012345

PPPP MM CCC NNNN XXXXXXXX

Where:

PPPP	MRT caller's Process Number (Mailbox Ordinal)
MM	MRT caller's Mainframe Number
CCC	Error Code
ERR	Unused
OK	Normal return, no error
2	ICN/32 message too long
3	Invalid command field
4	Can't find message name
5	Can't read message context
6	Context portion too big for MRT buffer
7	Ran out of Message Tables (see NMTS define)
8	Ran out of Destination Tables (see NDTS)
9	Ran out of Sinkgroup Tables (see NSGS)
10	Ran out of Sink Tables (see NSTS)
11	Dup or can't find Sink Group
12	Dup or can't find Sink Name
13	Event bit not defined
14	Error when releasing Message File (timer)
NNNN	Command submitted for action
XXXXXXX	Additional Information, depending on the error

The format of the dayfile message for dayfile codes RMQD, and RMRQ:

0 1 2 3 4 4  
123456789012345678901234567890123456789012345

NNNN MMMMMMMMMMMMMMMMMMMMMSSSSSSSS  
4 5 6 7 8 9 1

## APPENDIX A

## ABORT CODES

These abort codes appear in registers RC through RF of the task dump with a 7/1 abort. Numeric values are in hexadecimal.

**BSIO Aborts:**

<u>RC</u>	<u>RD</u>	<u>RE</u>	<u>RF</u>	<u>Routine</u>
0	1	0	0	BSPB (BSIWAB I/O reject)
0	2	0	0	BSPB (full buffer by BSIDTB)
0	3	Number of bits remaining	0	BSPB
0	4	0	0	BSIWAB, (Active write buffer is empty)
0	5	EXPANDQ error status	0	BSICWS
0	6	Write status error	0	BSICWS
0	7	Read status error	0	BSICRS
0	8	Bad header word	0	BSIDFB
0	9	Bad new word pointer value	0	BSIDFB

**ICN Aborts:**

<u>Description</u>	<u>RC</u>	<u>RD</u>	<u>RE</u>	<u>Routine</u>
Global common assign error	0	1		INIT
Too few GC pages	Status from RELGC ESR	2		INIT
Global common could not be attached	0	4		INIT
DEFEVQTQ error	0	4	DEFEVTQ status	INIT
Buffer could not be linked to free list	Status why buffer couldn't be linked	5		INITFL

**ICNSUBS Aborts:**

<u>RC</u>	<u>RD</u>	<u>RE</u>	<u>RF</u>	<u>Routine</u>
FFF10	Out of bounds EST ordinal			ICNWEST
FF	SETEVTQ status that was not zero			ISSUEIIB
FFF12	Out of bounds Link Table ordinal that was being written			ICNWLTE

**Link Driver Aborts:**

<u>RC</u>	<u>RD</u>	<u>RE</u>	<u>RF</u>	<u>Routine</u>
FFF00	Status from READLU ESR	Logical unit issued with READLU		CCCLD
FFF01	Number of CCCs found in EST	EST ordinal which caused this abort		CCCLD
FFF02	Error status from ICNINIT			CCLD

<u>RC</u>	<u>RD</u>	<u>RE</u>	<u>RF</u>	<u>Routine</u>
FFF03	ICN RG status response	ICN mailbox ordinal receive performed on		CCCLD
FFF04	ICNRS status response	ICN mailbox ordinal ICNRS performed on		CCCLD
FFF05	Status from WRITLU to CCCMGR	Logical unit WRITLU was performed on		CCCLD
FFF06	Status from READLU ESR after WRITLU	Logical unit used in READLU ESR		CCCLD
FFF07	Status from SETITMQ that caused this abort			CCCLD
FFF08	Status from SETITMQ on a short mainframe timeout after setting a STANDARD mainframe timeout period that caused this abort			CCCLD
FFF09	DEFEVHQ error status			DEFINEV
FFF0A	Invalid unit status from CCCLUN			DEVENT
FFF0B	Status from ICNSEND function			MM
FFF0C	Invalid RG status from ICNRECV			RG
FFF0D	Invalid status from ICNENQ			
FFF0E	Status from DEVICEQ ESR	Logical unit used in DEVICEQ ESR		ASSIGNLU
FFF0F	No more logical units available to assign			ASSIGNLU
FFF10	EST ordinal out of range			WRITEST
FFF11	Invalid status return from ICNRIDT			GETOMF
FFF12	Link Table Ordinal that was out of range			WRITELTE

<u>RC</u>	<u>RD</u>	<u>RE</u>	<u>RF</u>	<u>Routine</u>
FFF13	Length that was smaller than length of IPS ICN message header			CCLD

**MRR Aborts:**

<u>RC</u>	<u>RD</u>	<u>RE</u>	<u>RF</u>	<u>Routine</u>
			MGETGC error code	MRR INIT
Bad mmsbuf index				MRRWALK

**MRT aborts: (RC and RF = 0)**

<u>RD</u>	<u>RE</u>	<u>Description</u>	<u>Routine</u>
10	icneng status q	icneng return not = COMPLETE	Getmsg
20	icnget status	icnget return not = COMPLETE	Getmsg
30	global common words left	Inconsistent initial buffer allocation	Init
40	error	ASNGC esr error	Init
50	error	ASNGC couldn't get enough Global Common	Init
60	error	MGETGC esr errors	Init
70	icninit status	icninit result not = COMPLETE	Init
80	incriddt status	incriddt result not = COMPLETE	Init
90	error	DEFEVHQ esr error (timer def)	Init
100	error	SETITMQ esr error	Init
110	0	Duplicate Sequence Number file	Init
120	0	No Seq Num file found (SEQnnnn, CCS)	Init
130	nnnn	Bad nnnn in "SEQnnnn, CCS" file	Mrtrmn
140	0	MRTRNM not initialized	Mrtrmn
150	icnsend status	icnsend return not = COMPLETE	Mrtrmn

<u>RD</u>	<u>RE</u>	<u>Description</u>	<u>Routine</u>
160	-- error	SAVEQ esr error	Mrtrmn
162	icnsend status	icnsend return not = COMPLETE	MrtrsM
164	error	SAVEQ esr error	Rmf
166	icnsend status	icnsend return not = COMPLETE	Sotasgn
170	mmsbuf location	Bad index to mmsbuf found by WALK. Index found in mmsbuf location to be out of GC range	Walk

**NM Aborts:**

<u>RC</u>	<u>RD</u>	<u>RE</u>	<u>RF</u>	<u>Routine</u>
BBB01	ICN status from ICNRECV function			NM
BBB02	RATFOR symbol COMPLETE is nonzero.			CHKSTAT
BBB03	ICNINIT status			NMINIT
BBB04	DEFEVHQ status after assigning timer			NMINIT
BBB05	SETITMQ status after setting an interval timer			NMINIT
BBB06	ICN status response after sending ICNWMT request			CMT
BBB08	ICN status response after sending status request response			SR
BBB09	ICN status error from reading machine table			SSR
BBB0A	ICN status error from sending SSR ICN message			SSR

<u>RC</u>	<u>RD</u>	<u>RE</u>	<u>RF</u>	<u>Routine</u>
AAA02	Length of global context record	Length of PFM buffer into which the global context record is to be placed		NMCBCR
AAA04	Length of BSIO buffer (maximum)	Length of PFM buffer (+2) to be used by BSIO		
FFF00	ICNSEND status			IXINIT
FFF10	Number of words requested	Maximum size PFM buffer available		GETFREEW

## QU Aborts:

<u>RC</u>	<u>RD</u>	<u>RE</u>	<u>RF</u>	<u>Routine</u>
AAA00	ICNINIT status			QINIT
AAA01	DEFEVTO status (ICN timeout timers)			QINIT
AAA02	DEFEVTO status (MRT event)			QINIT
AAA03	ICNSEND status (MRT function)			QINIT
AAA04	DEFEVTO status (timer event)			QINIT
AAA05	SETITMQ status	SETITMQ event bit		QINIT
AAA06	UST status (BSIO logical unit)			QDE
AAA07	Invalid path ordinal			RQUEUE
AAA08	Invalid SETITMQ status (ICN timeout FOREVER)			RQUEUE
AAA09	Invalid ICNSEND status (sending to SOT)			RQUEUE

<u>RC</u>	<u>RD</u>	<u>RE</u>	<u>RF</u>	<u>Routine</u>
AAA0A	Invalid ICNRECV status			RQQUEUE
AAA0B	Unknown event bit			RQQUEUE
AAA0C	Invalid BSIO LUN			RQQUEUE
AAA0D	Path number	Next state path was going to execute	evflag causing abort	RQQUEUE
AAA0E	Invalid ICNSEND status (sending msg)			RQQUEUE
AAA0F	Invalid SETITMQ status (setting timeout timer)			RQQUEUE
AAA10	BSIO fd (BSOPEN)			QINITIAL
AAA11	BSIO fd (BSGLUN)			QINITIAL
AAA12	Unknown output msg status in QSINKMAP			QSTATEA
AAA13	ERR from BSCRE8			QSTATEB
AAA14	ERR from BSGLUN			QSTATEB
AAA15	Max bits for internal buffer (NO EOC)			QSTATEC
AAA16	BSIO fd (BSRTOP)			QSTATED
AAA17	BSIO fd (BSPB)			QSTATEE
AAA18	BSIO fd (BSRB)	Error from BSRB		QSTATEF
AAA19	BSIO fd (BSEOD)			QSTATEH
AAA1A	BSIO fd (BSPB)			QSTATEI
AAA1B	BSIO fd (BSEOC)			QSTATEJ
AAA1C	BSIO fd (BSCLOS called)			QSTATEK
AAA1D	BSIO fd (BSCLOS)			QSTATEG

## RQ Aborts:

<u>RC</u>	<u>RD</u>	<u>RE</u>	<u>RF</u>	<u>Routine</u>
FFF00	ICN status from initialization call			RQINIT
FFF01	Status from DEFEVTQ for defining ICN timeout event bits			RQINIT
FFF02	Status from DEFEVTQ for defining MRS event bits			RQINIT
FFF03	Status from ICNREAD id table function			RQINIT
FFF04	Status from DEFEVTQ for defining ICN interval timer event bit			RQINIT
FFF05	Status from SETITMQ for setting interval timer	Event bit used for interval timer		RQINIT
FFF06	BSIO unit status from UST ESR			DE
FFF07	Status from read ICN Machine Table function			CAM
FFF08	fd as returned by BSOPEN routine			DSS
FFF09	First 4 characters of invalid sinkgroup name from MRRSNM	Last four characters of invalid sinkgroup name from MRRSNM		DSS
FFF0A	Status from ICNGET			RQ
FFF0B	Status from SOTCMD ICNSEND function			RQ
FFF0C	ICN message response byte that was invalid			VIR

<u>RC</u>	<u>RD</u>	<u>RE</u>	<u>RF</u>	<u>Routine</u>
FFF0D	Invalid status from ICNENQ status			RQ
FFF0E	Invalid path number in ICN message			RQ
FFF0F	Unknown event bit encountered			RQ
FFF10	BSIO lun not a proper value			RQ
FFF11	path that stopped improperly	state path was to execute next	unknown event flag encountered	RQ
FFF12	Status from ICNSEND of an ICN message to IPS			RQ
FFF13	Status from SETTING ICN message timeout interrupts			RQ
FFF14	BSIO fd (tried to close)			PIT
FFF15	First 4 characters of file that was not BSOPEN'd whose lun could not be obtained	Second 4 characters of file	fd	DSS
FFF16	First 4 characters of pfn that was invalid (from FDB)	Second 4 characters of pfn		CPFR
FFF17	First 4 characters of lfn that was invalid (from lfn)	Second 4 characters of lfn		CPFR
FFF18	fd of bsio file that could not be BSRTOD'd			RQSTATED
FFF19	Negative (or zero) bits encountered in state			RQSTATEE
FFF1A	fd of file that BSRB wanted from BSRB caused the error on	Number of bits	ERR or EOC	RQSTATEE

<u>RC</u>	<u>RD</u>	<u>RE</u>	<u>RF</u>	<u>Routine</u>
FFF1B	fd of file that BSCLOS could not close			RQSTATEH
FFF1C	Status from ICNRMT that caused this abort			DSS
FFF1D	First 4 characters of sinkname not found	Second 4 characters of sinkname not found		DSMI
FFF1E	Status from SETTING ICN timeout event to FOREVER			RQ
FFF1F	Number of characters in parameter	SOT parameter number that caused this error		SOTCMD
FFF20	Illegal SOT parameter value			SOTCMD
FFF21	Illegal filetype parameter			SOTCMD
FFF22	ICNRIDT error status			SOTCMD
FFF23	DEFEVHQ ESR status error			CAM
FFF24	ICN status error in sending MRTRSGN function message			RQRSGN
FFF25	DEFEVHQ error status from clearing sinkgroup event bit definition			RQRSGN
FFF26	DEFEVHQ error status from defining sinkgroup name event bit definition			RQDSGN
FFF27	ICN status error in sending MRTDSGN function message			RQDSGN
FFF28	ICN status error in sending MRTRSM function message			RQRSM..
FFF29	Invalid file type parameter			OSNS

**SOT Aborts:**

<u>RC</u>	<u>RD</u>	<u>RE</u>	<u>RF</u>	<u>Routine</u>
	FE	ICNINIT status		INIT
	FF	ICNRIDT status		INIT
	FD	Illegal TTY #		SENDMB

**TQ Aborts:**

<u>RC</u>	<u>RD</u>	<u>RE</u>	<u>RF</u>	<u>Routine</u>
EEE00	Invalid UST status	lun that caused invalid status		TQ
EEE01	Invalid ICNENQ status			TQ
EEE02	Length of ICN message received from ICN	Maximum size ICN message TQ can accept		TQ
EEE03	Invalid ICNGET status			TQ
EEE04	Path number that was outside valid range			TQ
EEE05	Invalid ICNSEND status			IIR

APPENDIX B

MPX/OS USAGE SUMMARY

Disclaimer: This information is extracted from MPX/OS manual and is not guaranteed to be updated when MPX/OS manuals are updated.

## Editor Summary - ]J under ICF

## Special Character Usage

?	Matches any character (except newline)
%	Indicates beginning of line
\$	Indicates end of line or end of file
[...]	Character class (any one of these characters)
[^...]	Negated Character class (any character except these)
*	Closure (zero or more occurrences of previous pattern)
@	Escaped character (e.g. @%, @[, @*)
&	Ditto, i.e. whatever was matched
c1-c2	Range of characters between c1 and c2
@n	Specifies the newline mark at the end of a line
_nn_	Specifies "go to column" in a pattern search

## COMMAND SUMMARY

## Addresses:

17	a decimal number
.	the "current" line
\$	the last line of the file
/pat/	search forward for line containing pat
pat	search backward for line containing pat
line+n	n lines forward from line
line-n	n lines backward from line

## Defaults:

(.)	use current line
(.+1)	use the next line
(.,.)	use current line for both line numbers
(1,\$)	use all lines

## Commands:

(.)	a	append text after line (text follows)
	b file	submit file for batch execution
(.,.)	c	change text (text follows)
(.,.)	d	delete text
	e file	discard current text, enter file, remember file name
	f	print file name
	f file	remember file name
	h	print help information

(.)	i	insert text before line (text follows)
(.,.)	k line3	copy text to after line3
	l col,col	set line display window
(.,.)	m line3	move text to after line3
	o seq	retrieve output file from queue
(.,.)	p	print text (can be appended to other commands)
	q	quit
(.)	r file	read file, appending after line
(.,.)	s/pat/new/gp	substitute new for leftmost pat (g implies all occurrences)
	t	display tab columns
	t c	set tab character
	t col,...,col	set tab columns
	u	toggle uppercase forcing
(1,\$)	w file	write file, leave current text unaltered (if "file" isn't given, write to current filename)
	za file	delete file
	zo col,col	set search zone
(.)	=p	print line number, current line
(.+1)	CR	print next line
	-	repeat last command
(1,\$)	g/pat/command	do command on lines containing pat (except a, c, i, q commands)
(1,\$)	x/pat/command	do command on lines not containing pat (except a, c, i, q commands)

## Facility Command Summary

## BATCH CONTROL FACILITY

Bsp seqno,blk  
End seqno  
REPeat seqno,times  
REWind seqno,prior  
Suppress seqno

Backspace a file on a device  
Terminate transmission of a file  
Cause repeated transmission  
Rewind and return to queue  
Suppress carriage control

## DEVICE CONTROL FACILITY

Go pdc  
OFF pdc  
ON pdc  
Read pdc  
SEtdc pdc,sdc  
STatus  
Wait pdc

Resume "waited" file transmission  
Make equipment logically off  
Make equipment logically on  
Take input from equipment  
Set secondary disposition code  
List equipment  
Suspend file transmission

pdc              Primary Disposition Code (2 characters, installation defined, unique to equipment)

## DAYFILE MANAGEMENT FACILITY

Archive  
Dump fn,own,ed,ak,sydt,eydt  
Type JN=jn,TN=tn, ID=id, EV=ev, AC=ac  
Type ALL

Save current dayfile  
Select dayfile entries between  
sydt and eydt at Y.DDD.HHMM.  
Set selection criteria for dump:  
jn = job name (8 ch)  
tn = task ident (8 ch)  
id = ident code (1 ch)  
ev = event code (1 ch)  
ac = action code (2 ch)

## FILE CONTROL FACILITY

List O,own,pack  
List A,own,pack  
List D  
Release,fn,own,ed,ak,R  
Release,fn,own,ed,ak

Open files  
All files  
Device Idents and % full  
Release unused space  
Release whole file

## OPERATOR CONTROL FACILITY

Accept seqno,taskid,message  
Clear  
Display fwa,lwa  
Evict seqno,q  
Go seqno,taskid  
Idle seqno,taskid

Accept a message  
Clear Informative messages  
Display memory  
Remove file from queue (q= I,O,H)  
Resume an "idle" task  
Idle a task

Lastpage	Display previous memory
Nextpage	Display next sequential memory
Priority seqno,q,prior	Alter file priority (q= I,O,H)
Queue	Display state of all queues
Queue,q	Display specific queue (q= I,O,H)
Reject seqno,taskid,message	Reject a message
Set adr,val,val,val....	Change memory
Set adr,rep*val,rep*val...	Change memory, rep= num of words
Term seqno	Terminate a job
Update	Repeated execution of last cmd
Watch	Display state of executing jobs
Watch seqno	Display state of job & its tasks
Watch seqno,taskid	Display state of single task

O

O

O

## APPENDIX C

## VALID COMMAND INPUTS

<u>Destination Group *</u>	<u>Destination (within group shown)</u>
N/A	NMCDATA
N/A	AWNCDATA
N/A	ARQDATA
N/A	ID50DATA
N/A	NEDNDATA
MED	OPRMSG

\* For circuit destined data use entity names from port list. These names should be the FNOC defined names so data destined to circuits from IPS matches the port destinations.

O

## APPENDIX D

## CCS BUILD CONSIDERATIONS

The following routines must be in the MPX library:

ICNENQ - Enquire about the contents of a mailbox  
ICNGET - Get the contents of a letter  
ICNINIT - Initialize the Interface to ICN (Post Office)  
ICNRECV - Enquire about the status of a mailbox and get the contents of the letter  
ICNREST - Reads an ICN EST entry  
ICNRIDT - Reads the ICN ID Table  
ICNRLTE - Reads an ICN Link Table Entry  
ICNRMT - Reads the ICN Machine Table  
ICNWMT - Writes the ICN Machine Table  
ICNRS - Requests ICN statistics  
ICNSEND - Sends a message to another task via ICN  
ICNWEST - Writes an ICN EST entry  
ICNLWLT - Writes an ICN Link Table Entry  
BEOR - Mark End-of-Record in Context or Content  
BSEOC - Mark End-of-Context  
BSEOD - Mark End-of-Content and Start-of-Context  
BSCLOS - Close the Message file (MPX/OS CLOSE)  
BSCLREM - Close and Remove a "bscre8"ed file  
BSCRE8 - Creates a new Message file (MPX/OS ALLOCATE & OPEN)  
BSOPEN - Open an existing Message file  
BSPB - Write Context or Content data (Pack bits)  
BSRB - Read Message Context or Content  
BSRTOC - Rewind to Start-of-Context  
BSRTOD - Rewind to Start-of-Content  
MRRINIT - Initialize Message Routing Reading package  
MRRMD - Read Message Destinations  
MRRMI - Read Message Information

MRSMI - Read Sink's Message Information  
MRRMSS - Read Message Storage Statistics (for flow control)  
MRRSNM - Read Sinkgroup's Next Message  
MRRSQD - Read Sinkgroup Destinations

## APPENDIX E

## DISPLAYS FOR PA, PB, AND PC COMMANDS

Entity Name List display

Display format:

## ENTITY DISPLAY

ORD	NAME	TYPE	STATUS	MODE	PORT	SUBORDINATE TO
oo	nnnnn	tttt	sss	m	pp	sssss
.	.	.	.	.	.	.
.	.	.	.	.	.	.
.	.	.	.	.	.	.
oo	nnnnn	tttt	sss	m	pp	sssss

End of ELIST

where:

oo - ordinal number

nnnn - entity name

tttt - protocol (NEDN, NEDS, AWN, ID50, NMC)

sss - port status (ON, OFF)

m - mode - for type NEDN:

A - wait and send to NEDS when they are all online

B - send to all NEDS; those offline will lose the message

C - send to available NEDS now; wait and send to others when available

for type AWN:

D - double buffer

S - single buffer

pp - port number

ssss - subordinate entity name

Sample displays:
