SEQ 0002

1. ABSTRACT

LPE IS A TOMOD THAT EXERCISES UP TO EIGHT LPD11 PHOTO-COMP INTERFACES. BY USING THE BUILT IN TESTER LOGIC, IT TRANSMITS AND CHECKS ALL POSSIBLE DATA PATTERNS IN ADDITION TO STATUS CHECKING. ALL LPD11'S SELECTED FOR TEST (UP TO 8 LPD'S WITH CONTIGUOUS ADDRESSES AND VECTORS) ARE ACTIVATED AND RUN CONCURRENTLY. ALL STATUS AND DATA ERRORS ARE REPORTED ON THE CONSOLE TTY.

2. REQUIREMENTS

HARDWARE: UP TO EIGHT LPD11 INTERFACE LOGICS

STORAGE:: LPE REQUIRES:

1. DECIMAL WORDS: 560
2. OCTAL WORDS: 1060
3. OCTAL BYTES: 2140

3. PASS DEFINITION

ONE PASS OF THE LPE MODULE CONSISTS OF CONTINUOUSLY SENDING AND CHECKING A COMPLEMENTING BINARY COUNT PATTERN FOR THE TIME PERIOD DEFINED BELOW.

4. EXECUTION TIME

LPE OPERATING BY ITSELF WILL TAKE AN AVERAGE OF ONE MINUTE TO COMPLETE ONE PASS.

5. CONFIGURATION REQUIREMENTS

DEFAULT PRAMETERS:

DEVADR: 172710, VECTOR: 320, BR1: 4

REQUIRED PRAMETERS:

AT CONFIGURATION TIME THE USER MUST SPECIFY:

VCT: VECTOR ADDRESS OF FIRST LPD IF NOT 320

DVC: NO. OF LPD'S IF GREATER THAN 1

6. DEVICE/OPTIONS SETUP

PLACE THE LPD LOGIC(S) IN THE LOCAL TEST MODE. THIS IS ACCOMPLISHED BY SETTING SWITCH 8 OF SWITCH GROUP 2 ON THE M523 MODULE TO THE "ON" POSITION.

7. MODULE OPERATION

7.1 TEST SEQUENCE

- A. START: THIS CODE SETS UP THE BASE ADDRESSES DEFINED BY "ADDR".
- B. SETVEC: THIS CODE CHECKS "DIVID1" FOR NON-ZERO SELECTION, AND SETS UP THE VECTORS FOR SELECTED LINES WITH INT SERVICE ADDRESSES AND BR LEVELS.
- C. SELECT: THIS CODE COUNTS THE SELECTED LPD'S AND SETS UP THE PROGRAM STATUS TABLE "LPDSTS."
- D. RESTRRT: THIS CODE CLEARS TABLES, INITIALIZES FLAGS & TIMERS AND THEN STARTS OR RESTARTS ALL SELECTED LPD'S BY SENDING DATA & ENABLING THE TESTER INTERRUPT ENABLE.
- E. TIMER: THIS IS AN "END PASS" TIMER LOOP VIA "BREAKS" TO THE MONITOR. FLAG "EOP" IS SET WHEN THIS LOOP EXPIRES (ABOUT 1 MINUTE).
- F. TMOUT: THIS TIMER ALLOWS ENOUGH TIME FOR ALL LPD'S TO COMPLETE THE LAST DATA TRANSFER. IF ANY LPD IS STILL ACTIVE IT IS REPORTED AND THEN DROPPED. IN THE EVENT THAT ALL SELECTED LPD'S FAIL TO INTERRUPT THEN THE MODULE WILL BE DROPPED.
- G. TSRSRV: THE TESTER SERVICE ROUTINE SIMPLY QUEUES UP THE REQUEST FOR SERVICE IN A FIFO QUEUE, UPDATES THE POINTER, AND RETURNS CONTROL BACK TO THE MONITOR WITH A "PIRQ". THE ELEMENT THAT GETS STORED IN THE QUEUE IS THE NUMBER OF THE INTERRUPTING TESTER. ACTUAL SERVICING IS DONE LATER WHERE THE SERVICE CODE IS EXECUTED AT LEVEL ZERO.

- H. TSERV: THIS CODE RETRIEVES THE TESTER NO., CHECKS STATUS AND DATA INFORMATION FOR THIS TESTER, REPORTS ERRORS, ENABLES THE CORRESPONDING LPD INTERRUPT ENABLE, THEN DOES AN "EXIT" PACK TO THE MONITOR.
- I. LSRV: THE LPD SERVICE ROUTINE SIMPLY QUEUES UP THE REQUEST FOR SERVICE IN A FIFO QUEUE, UPDATES THE POINTER AND RETURNS CONTROL BACK TO THE MONITOR WITH A "PIRQ". THE ELEMENT THAT GETS STORED IN THE QUEUE IS THE LPD NO. OF THE INTERRUPTING LPD. ACTUAL SERVICING IS DONE LATER WHERE THE SERVICING CODE IS EXECUTED AT LEVEL ZERO.
- J. LPDSRV: THIS CODE RETRIEVES THE LPD NO., CHECKS STATUS AND DATA INFORMATION FOR THIS LPD, REPORTS ERRORS AND GOES TO ROUTINE "PASSCK".
- K. PASSCK: THIS CODE DETERMINES IF THE CURRENT INTERRUPTING LPD SHOULD BE RESTARTED WITH THE NEXT DATA PATTERN. IF NOT IT IS TIME FOR "END PASS" MESSAGE.
- L. SENDAT: THIS CODE SENDS DATA AND ENABLES THE TESTER INTERRUPT ENABLE FOR ANOTHER TESTER/LPD INTERRUPT SEQUENCE.

7.2 DESCRIPTION OF TABLES AND QUEUES

- A. DATAR: 8 WORD DATA TABLE - CONTAINS THE CURRENT DATA WORDS SENT TO THE LPD TESTER LOGIC.
- B. INTQ: 8 WORD INTERRUPT SERVICE FIFO QUEUE - CONTAINS LPD NUMBERS REQUIRING SERVICE.
- C. LPDSTS: 8 BYTE TABLE WHICH SPECIFIES WHAT EACH LPD IS DOING: NOT SELECTED (0), TESTER/LPD DATA TRANSFER SEQUENCE INPROGRESS (377), TESTER/LPD DATA TRANSFER SEQUENCE COMPLETED (177) - THIS CONDITION IS SET WHEN THE "END PASS" MESSAGE IS DUE.

LPEC DFC/X11 SYSTEM EXERCISER MODULE MACV11 30A(1052) 12-OCT-78 16:51 PAGE 6
XLPEC0.P11 12-OCT-78 11:58

SEQ 0005

8. OPERATION OPTIONS

- A. THE USER CAN MODIFY "DV1D1" TO SELECT OR DESELECT INDIVIDUAL LPD11'S.
- B. THE USER CAN USE THE "MOD" COMMAND TO DUMP THE TABLES AND QUEUES DESCRIBED IN 7.2 TO OBTAIN MORE DETAILED INFORMATION.

9. NON STANDARD PRINTOUTS

- A. "NO LPD(S) SELECTED" IS TYPED IF THE USER SETS "DV1D1" TO ZERO IN ERROR.
- B. IF AN LPD FAILS TO COMPLETE A TESTER/LPD DATA TRANSFER IN THE TIME ALLOTTED BY ROUTINE "TMOUT", IT IS CONSIDERED HUNG. THE MESSAGE "LPD# N WAS DROPPED" IS TYPED WHERE N IS THE LPD NUMBER ACCORDING TO IT'S BUS ADDRESS.

NOTE: THE ABOVE PRINTOUT WILL OCCUR IF THE OPERATOR FAILS TO COMPLY WITH SECTION "6" OF THIS DOCUMENT.
