## 1.0 PROGRAM DESCRIPTION

The PRTC12-F program operates the TC12-F tape option which is pre-wired in the PDP-12 computer and allows the user to read and write in the forward direction DECTapes that have been formatted on the PDP-8, PDP-9, PDP-10, or PDP-15 computers. The tape used on the PDP-12 is in LINC format and differs from other DECTapes in the following ways:

- a. Tape direction over the tape head is reversed.
- b. The polarity of the tape heads is reversed.
- c. Channels one and three are reversed.
- d. Data transfer has a different bit configuration. The following table is a 12-bit comparison of the two systems.

LINCtape Format	0	1	2	3	4	5	6	7	8	9	10	11
DECTape Format	2	5	8	11	1	4	7	10	0	3	6	9

- e. The "mark track" on LINCtape is 4-bit oriented and on DECTape is 8-bit oriented. The TC12-F hardware has a special window register, but only the "block mark" (BM) is decoded. Data flags, bit shuffling, and the computation and verification of the checksum are all done with software.

The PRTC12-F program is written in LAP6-DIAL<sup>1</sup> language and is filed on the DIAL tape with the name PRTC12-F.

## 2.0 STARTING PROCEDURE

PRTC12-F is started by the following procedure.

- a. Start the DIAL system (as described in the LAP6-DIAL Manual, DEC-12-SE2B-D). (Be sure to wind sufficient tape on the takeup reels so that they are positioned at least three blocks beyond the end zone.)
- b. Call the PRTC12-F program by the command  
LO PRTC12-F,n  
where n is the tape unit number from which the program will be loaded. Units 0-7 can be used.

---

<sup>1</sup>LAP6-DIAL is hereafter referred to as DIAL.

PRTCl2-F occupies locations 3500 through 7712 and is nondestructive. The program restarts automatically after completing an operation and may be restarted manually at any time at its starting address (4020).

### 3.0 USING PRTCl2-F

After it is loaded, the program displays an introduction followed by three sets of questions for the user to define the operation.

3.1 The first display is an introduction to the program as follows:

```
LINCTAPE/DECTAPE CONVERSION PROGRAM
THIS PROGRAM WILL RUN SUCCESSFULLY
ONLY ON A PDP-12 COMPUTER EQUIPPED WITH THE
TC12-F OPTION. IT WILL READ AND WRITE
FROM TAPE UNITS 0-7 IN ANY TAPE
FORMAT; YOU MUST SPECIFY THE CORRECT FORMAT.
TYPE LINE FEED TO CONTINUE.
```

Press the line feed or return key to display the second message.

3.2 The READ questionnaire is displayed next.

```
READ _____ BLOCKS
TAPE FORMAT _____ UNIT _____
STARTING WITH BLOCK _____
FORMAT A -- PDP-8 201 WORDS/BLOCK
FORMAT B -- PDP-12 400 WORDS/BLOCK
FORMAT C -- OTHER (PDP-9, 10, 15, WITH 600 12-BIT
WORDS/BLOCK)
```

Type in each value followed by a carriage return and then press line feed to advance to the next display.

3.3 The WRITE questionnaire must be answered.

```
WRITE THE RESULT
IN TAPE FORMAT _____ ON UNIT _____
STARTING AT BLOCK _____
FORMAT A -- PDP-8 201 WORDS/BLOCK
FORMAT B -- PDP-12 400 WORDS/BLOCK
FORMAT C -- OTHER (PDP-9, 10, 15, WITH 600 12-BIT
WORDS/BLOCK)
```

Again, type the correct values, each followed by a carriage return. Press line feed when completed to display the last message.

3.4 Respond to the PARITY questionnaire:

CHECK PARITY-  
 0 SPECIFIES NO  
 1 SPECIFIES YES

Type 0 or 1 and press line feed. The requested operation is performed. (Be sure sufficient tape has been wound on the take-up reels before pressing line feed.)

4.0 PROGRAM OPERATION

4.1 Transfers

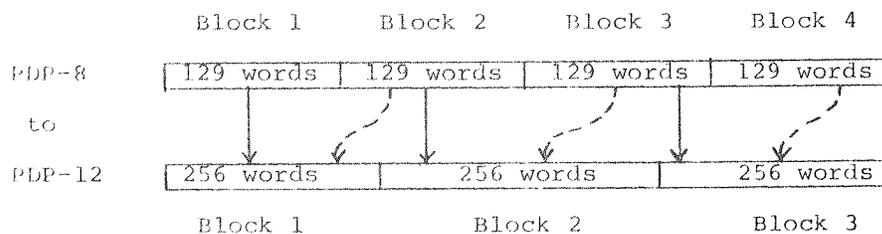

There are nine possible combinations of data transfer referred to as MODOP 1 through 9, as defined in the TAPE FORMATS table below. The block packing column in the table describes all of the possible transfer configurations.

Table 1  
 TAPE FORMATS

MODOP	Transfer Direction	Number of 12 Bit Words/Block (Octal)		Block Packing Arrangement		Maximum Number of Octal Blocks Read
		READ	WRITE	READ	WRITE	
1	8 to 8	201	201	1	1	2,000
2	8 to 12	201	201	1	1	1,000
3	8 to N	200	600	3	1	2,000
4	12 to 8	400	200	1	2	1,000
5	12 to 12	400	400	1	1	1,000
6	12 to N	400	600	3	2	1,000
7	N to 8	600	200	1	3	750
8	N to 12	600	400	2	3	520
9	N to N	600	600	1	1	2,000

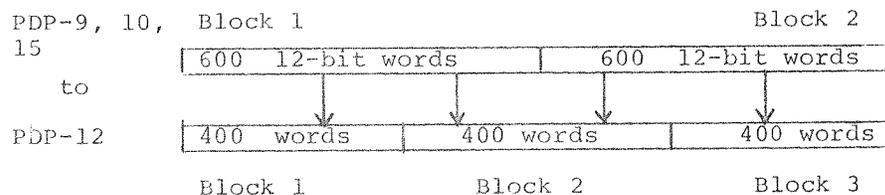

N = PDP-9, PDP-10, PDP-15.

A PDP-8 to PDP-12 transfer is a block to block transfer; a 129 word block of PDP-8 DECTape is written on a block of PDP-12 LINCtape. The PDP-12 LINCtape can have a 256 word block format or a 129 word block format. With the 256 word format, a block of PDP-8 DECTape is written in the first 129 locations of the LINCtape and the first 127 words of the next DECTape block are written on the same LINCtape block. This second DECTape block is written in its entirety again in the first 129 locations of the second LINCtape block to make a block to block transfer, as diagrammed.

For a PDP-12 to PDP-8 transfer, one 256 word LINCtape block is written on two PDP-8 128 word blocks. 7777 is written for the 129th (link) word in this case.

With PDP-9, 10, and 15 to PDP-12 transfers, data does not overlap, as illustrated.

Note that transferring an odd number of PDP-9, 10, and 15 blocks will use an extra half PDP-12 block. Similarly, PDP-12 and PDP-8 to PDP-9, 10, and 15 transfers may not completely fill the last block with information.

#### 4.2 READ

When the desired block is found, the line counter is initialized. The control words that precede the data on tape are skipped. When a word from tape has been assembled in the tape AC register, the word flag is raised. The program checks the flag with the SWD instruction and the PC is incremented when it is set. Then the data is read into the AC with the TAC

instruction, parity is computed and the data is shuffled and stored in memory. When the WCOUNT is incremented to 7777, it signifies that the complete block of data has been read and that the parity word is now in the AC. This is computed in the parity register (LPB) and, if the transfer was executed correctly, the resulting checksum (CS) should be 7777. If the operator had requested a parity check and the CS was incorrect, the block will be read again until a correct CS is obtained or until the operator intervenes. For PDP-12 transfers, the data is checked after it has been read or written. If an error is detected, the program will halt at location 6766.

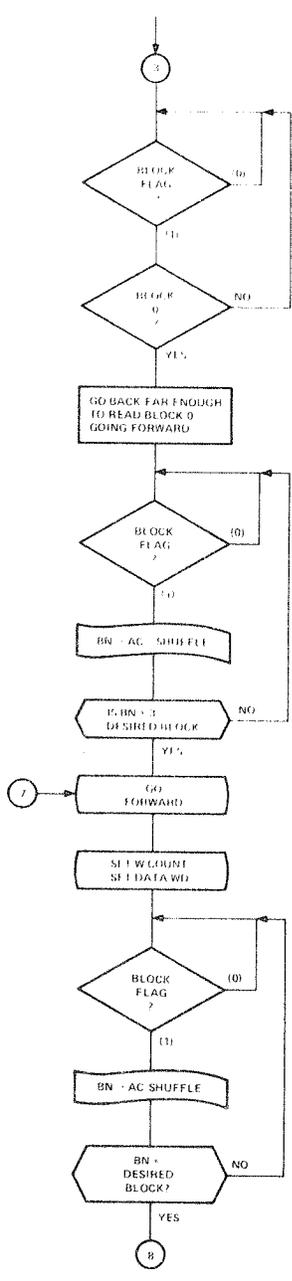

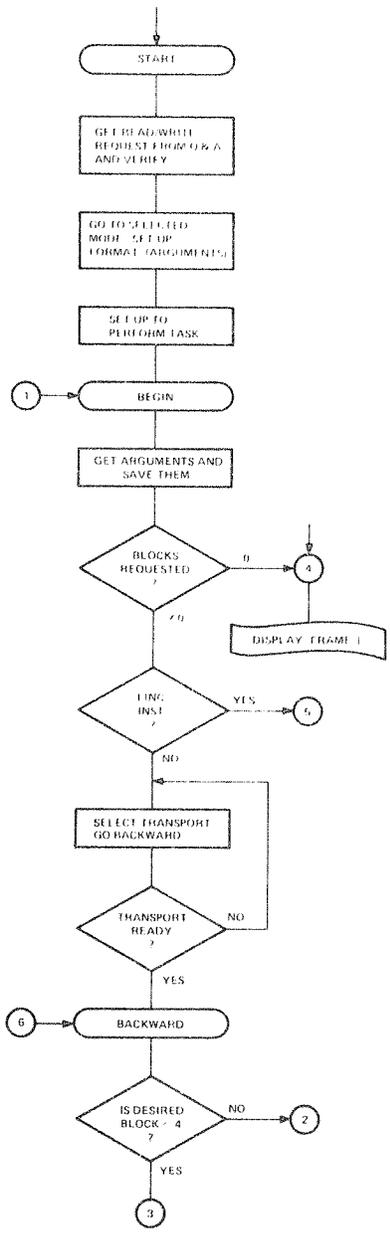

#### 4.3 WRITE

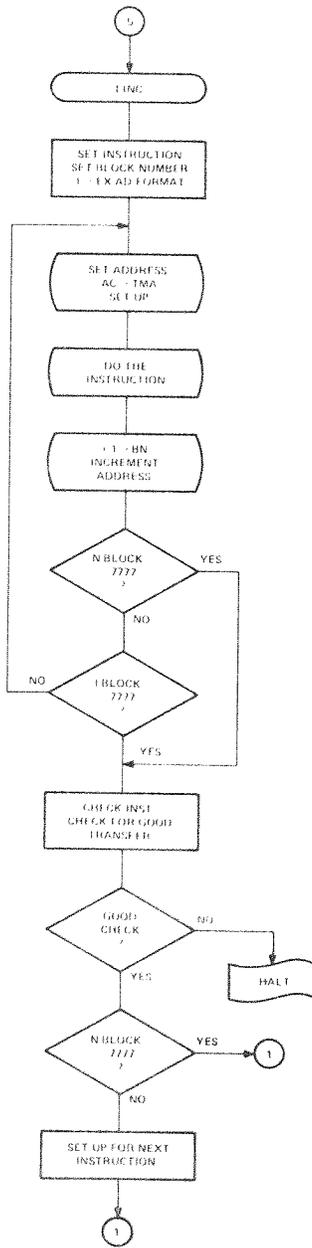

The transport is set in motion and a check is made to assure that its status is OK. If it is not OK, i.e., more than one unit is selected or the WRITE LOCK switch is on, a wait loop is entered until the necessary corrections are made. When the desired block is found and the transport is going forward, the program is transferred to the write routine, DOUTIT. Two control words are skipped and then the writers are turned on with IOT 6152 and the appropriate AC bits. The reverse checksum is written as 7777 after the third control word. Then data is read from memory, the parity word is generated, and the data is shuffled and transferred from the AC to the Tape Buffer Register with IOT 6154. When the WCOUNT reaches 7777, the parity word is shuffled and written on tape.

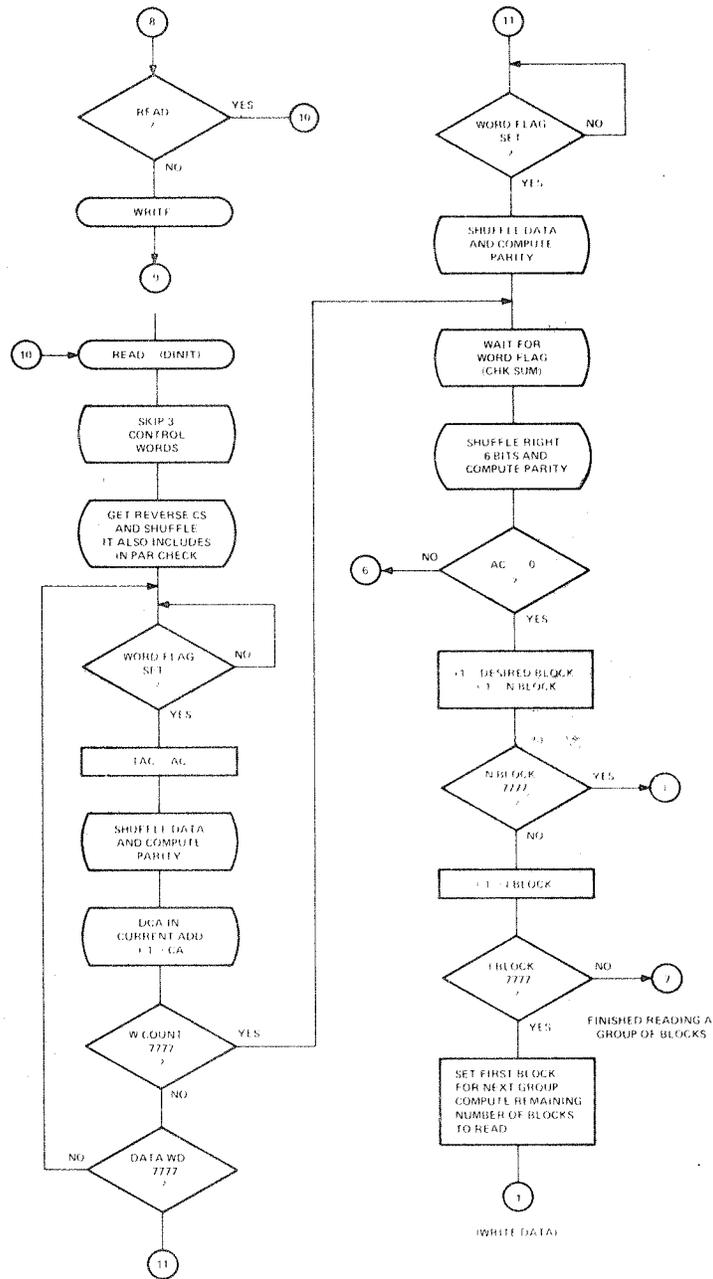

#### 4.4 Restrictions

The PRTCl2-F program has the following restrictions:

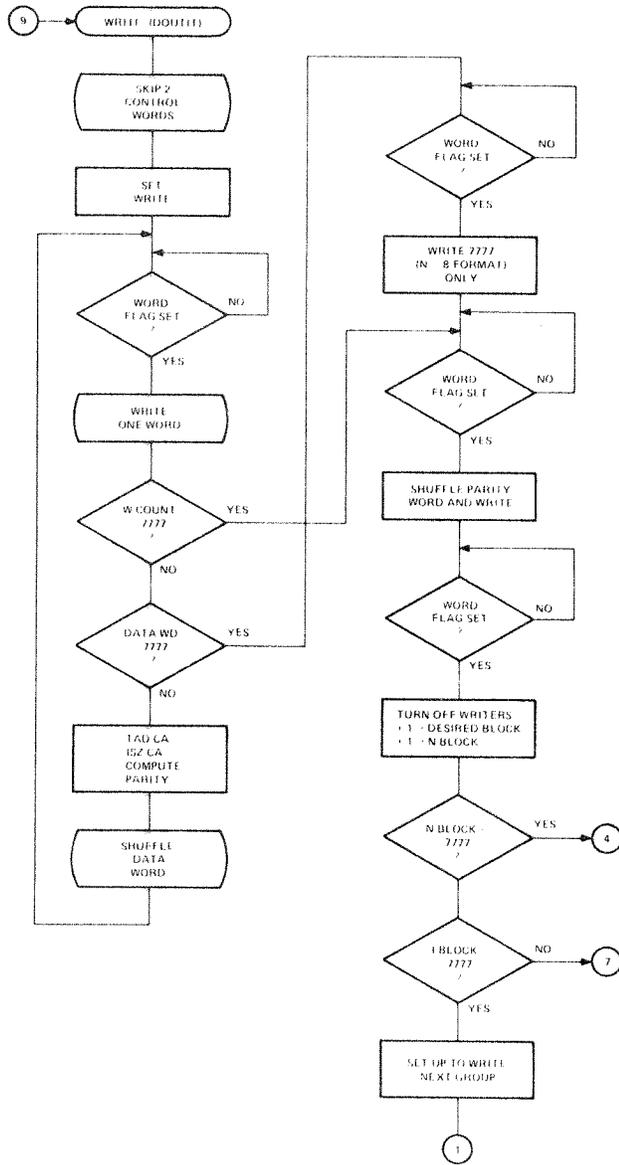

- a. Data is read and written only in the "forward" direction.
- b. Except for LINctape transfers, data is not checked after being written on tape.
- c. The maximum number of blocks in one transfer is 2000<sub>8</sub> blocks.

HOW TO OBTAIN SOFTWARE INFORMATION

Announcements for new and revised software, as well as programming notes, software problems, and documentation corrections are published by Software Information Service in the following newsletters.

Digital Software News for the PDP-8 Family  
Digital Software News for the PDP-9/15 Family  
PDP-6/PDP-10 Software Bulletin

These newsletters contain information applicable to software available from Digital's Program Library.

Please complete the card below to place your name on the newsletter mailing list.

Questions or problems concerning DEC Software should be reported to the Software Specialist at your nearest DEC regional or district sales office. In cases where no Software Specialist is available, please send a Software Trouble Report form with details of the problem to:

Software Information Service  
Digital Equipment Corporation  
146 Main Street, Bldg. 3-5  
Maynard, Massachusetts 01754

These forms, which are available without charge from the Program Library, should be fully filled out and accompanied by teletype output as well as listings or tapes of the user program to facilitate a complete investigation. An answer will be sent to the individual and appropriate topics of general interest will be printed in the newsletter.

New and revised software and manuals, Software Trouble Report forms, and cumulative Software Manual Updates are available from the Program Library. When ordering, include the document number and a brief description of the program or manual requested. Revisions of programs and documents will be announced in the newsletters and a price list will be included twice yearly. Direct all inquiries and requests to:

Program Library  
Digital Equipment Corporation  
146 Main Street, Bldg. 3-5  
Maynard, Massachusetts 01754

Digital Equipment Computer Users Society (DECUS) maintains a user Library and publishes a catalog of programs as well as the DECUSCOPE magazine for its members and non-members who request it. For further information please write to:

DECUS  
Digital Equipment Corporation  
146 Main Street  
Maynard, Massachusetts 01754

READER'S COMMENTS

PRTCL2-F  
DEC-12-VIYA-D

Digital Equipment Corporation maintains a continuous effort to improve the quality and usefulness of its publications. To do this effectively we need user feedback – your critical evaluation of this manual.

Please comment on this manual's completeness, accuracy, organization, usability, and readability.

DEC also strives to keep its customers informed of current DEC software and publications. Thus, the following periodically distributed publications are available upon request. Please check the appropriate boxes for a current issue of the publication(s) desired.

- Software Manual Update, a quarterly collection of revisions to current software manuals.
- User's Bookshelf, a bibliography of current software manuals.
- Program Library Price List, a list of currently available software programs and manuals.

Please describe your position. \_\_\_\_\_
