Escape Sequences

An escape sequence begins with the C0 character ESC, followed by one or more ASCII graphic characters. For example,

```
ESC # 6
```

is an escape sequence that changes the current line of text to double-width characters. Escape sequences use only 7-bit characters, and can be used in 7-bit or 8-bit environments.

Control Sequences

A control sequence begins with CSI (9/11), followed by one or more ASCII graphic characters. CSI can also be expressed as the 7-bit code extension ESC [. So you can express all control sequences as escape sequences whose second character code is [. For example, the following two sequences are equivalent sequences that perform the same function (they cause the display to use 132 columns per line rather than 80).

```
CSI ? 3 h
```

```
ESC [ ? 3 h
```

Whenever possible, use CSI instead of ESC [to introduce a control sequence. CSI can only be used in an 8-bit environment.

Device Control Strings

A device control string is a delimited string of characters used in a data stream as a logical entity for control purposes. It consists of an opening delimiter DCS, a command string (data), and a closing delimiter ST.

DCS is an 8-bit control character that can also be expressed as ESC P when coding for a 7-bit environment.

ST is an 8-bit control character that can also be expressed as ESC / when coding for a 7-bit environment.

TRANSMITTED CODES

Main Keypad Function Keys

| Key | Code Transmitted |
|---|---|
|  | DEL character |
| Tab | HT character |
| Return | CR character only or a CR character and an LF character, depending on the set/reset state of line feed/new line mode (LNM). |
| Ctrl | Does not send a code. |
| Lock | Does not send a code. |
| Shift (2 keys) | Does not send a code. |
| Space bar | SP character |
| Compose Character | Does not send a code. |

Editing Keys

| Key | Code Generated VT200 Mode | VT100, VT52 Modes |
|-------------|------------------------------|----------------------|
| Find | CSI 1 ~ | None |
| Insert Here | CSI 2 ~ | None |
| Remove | CSI 3 ~ | None |
| Select | CSI 4 ~ | None |
| Prev Screen | CSI 5 ~ | None |
| Next Screen | CSI 6 ~ | None |

Cursor Control Keys

| Key | ANSI Mode* | | VT52 Mode* | |
|-----|------------|-------------|------------|-------------|
| | Normal | Application | Normal | Application |
| ↑ | CSI A | SS3 A | ESC A | ESC A |
| ↓ | CSI B | SS3 B | ESC B | ESC B |
| → | CSI C | SS3 C | ESC C | ESC C |
| ← | CSI D | SS3 D | ESC D | ESC D |

* ANSI mode applies to VT200 and VT100 modes. VT52 mode is an ANSI-incompatible mode.

Auxiliary Keypad Keys

| Key | VT100/VT200 ANSI Mode* | | VT52 Mode* | |
|-------|---------------------------|-------------------------------|---------------------------|-------------------------------|
| | Keypad Numeric Mode | Keypad Application Mode | Keypad Numeric Mode | Keypad Application Mode |
| 0 | 0 | SS3 p | 0 | ESC ? p |
| 1 | 1 | SS3 q | 1 | ESC ? q |
| 2 | 2 | SS3 r | 2 | ESC ? r |
| 3 | 3 | SS3 s | 3 | ESC ? s |
| 4 | 4 | SS3 t | 4 | ESC ? t |
| 5 | 5 | SS3 u | 5 | ESC ? u |
| 6 | 6 | SS3 v | 6 | ESC ? v |
| 7 | 7 | SS3 w | 7 | ESC ? w |
| 8 | 8 | SS3 x | 8 | ESC ? x |
| 9 | 9 | SS3 y | 9 | ESC ? y |
| - | -(minus) | SS3 m | - | ESC ? m |
| , | ,(comma) | SS3 l | , | ESC ? l† |
| . | .(period) | SS3 n | . | ESC ? n |
| Enter | CR or CR LF | SS3 M | CR or CR LF | ESC ? M‡ |
| PF1 | SS3 P | SS3 P | ESC P | ESC P |
| PF2 | SS3 Q | SS3 Q | ESC Q | ESC Q |
| PF3 | SS3 R | SS3 R | ESC R | ESC R |
| PF4 | SS3 S | SS3 S | ESC S | ESC S† |

* ANSI mode applies to VT200 and VT100 modes. VT52 mode is an ANSI-incompatible mode.

† You cannot generate these sequences on a VT52 terminal.

‡ Keypad numeric mode. **Enter** generates the same codes as **Return**. You can change the code generated by **Return** with the line feed/new line mode. When reset, line feed/new line mode causes **Return** to generate a single control character (CR). When set, the mode causes **Return** to generate two control characters (CR, LF).

Top Row Function Keys

| Name on Legend Strip | Generic Name | Code Generated | |
|----------------------|--------------|----------------|-------------------|
| | | VT200 Mode | VT100, VT52 Modes |
| Hold Screen | (F1)* | - | - |
| Print Screen | (F2)* | - | - |
| Set-Up | (F3)* | - | - |
| Data/Talk | (F4)* | - | - |
| Break | (F5)* | - | - |
| F6 | F6 | CSI 1 7 ~ | - |
| F7 | F7 | CSI 1 8 ~ | - |
| F8 | F8 | CSI 1 9 ~ | - |
| F9 | F9 | CSI 2 0 ~ | - |
| F10 | F10 | CSI 2 1 ~ | - |
| F11 (ESC) | F11 | CSI 2 3 ~ | ESC |
| F12 (BS) | F12 | CSI 2 4 ~ | BS |
| F13 (LF) | F13 | CSI 2 5 ~ | LF |
| F14 | F14 | CSI 2 6 ~ | - |
| Help | (F15) | CSI 2 8 ~ | - |
| Do | (F16) | CSI 2 9 ~ | - |
| F17 | F17 | CSI 3 1 ~ | - |
| F18 | F18 | CSI 3 2 ~ | - |
| F19 | F19 | CSI 3 3 ~ | - |
| F20 | F20 | CSI 3 4 ~ | - |

* F1 through F5 are local function keys and do not generate codes.

Keys Used to Generate 7-Bit Control Characters

| Control Character Mnemonic | Key Pressed With Ctrl (All Modes) | Dedicated Function Key |
|----------------------------|-----------------------------------|------------------------|
| NUL | 2, space | |
| SOH | A | |
| STX | B | |
| ETX | C | |
| EOT | D | |
| ENQ | E | |
| ACK | F | |
| BEL | G | |
| BS | H | F12 (BS)* |
| HT | I | Tab |
| LF | J | F13 (LF)* |
| VT | K | |
| FF | L | |
| CR | M | Return |
| SO | N | |
| SI | O | |
| DLE | P | |
| DC1 | Q† | |
| DC2 | R | |
| DC3 | S† | |
| DC4 | T | |
| NAK | U | |
| SYN | V | |
| ETB | W | |
| CAN | X | |
| EM | Y | |
| SUB | Z | |
| ESC | 3, [| F11 (ESC)* |
| FS | 4, / | |
| GS | 5,] | |
| RS | 6, ~ | |
| US | 7, ? | |
| DEL | 8 | Delete |

* Keys F11, F12, and F13 generate these 7-bit control characters only when the terminal is in VT100 mode or VT52 mode.

† These keystrokes are enabled only if XOFF support is disabled. If XOFF support is enabled, then **CTRL-S** is a "hold screen" local function and **CTRL-Q** is a "release screen" local function.

RECEIVED CODES
Compatibility Level (DECSCSCL)

| Sequence | Action |
|-----------------|--|
| CSI 6 1 " p | Set terminal for level 1 (VT100 mode). |
| CSI 6 2 " p | Set terminal for level 2 (VT200 mode, 8-bit controls). |
| CSI 6 2 ; 0 " p | Set terminal for level 2 (VT200 mode, 8-bit controls). |
| CSI 6 2 ; 1 " p | Set terminal for level 2 (VT200 mode, 7-bit controls). |
| CSI 6 2 ; 2 " p | Set terminal for level 2 (VT200 mode, 8-bit controls). |

CO (ASCII) Control Characters Recognized

| Mnemonic | Name | Action |
|-----------------|---------------------------|---|
| NUL | Null | Ignored when received. |
| ENQ | Enquiry | Generates answerback message. |
| BEL | Bell | Generates bell tone if bell is enabled. |
| BS | Backspace | Moves cursor to the left one character position: if cursor is at left margin, no action occurs. |
| HT | Horizontal tabulation | Moves cursor to next tab stop, or to right margin if there are no more tab stops. Does not cause auto wrap. |
| LF | Linefeed | Causes a line feed or a new line operation, depending on the setting of new line mode. |
| VT | Vertical tabulation | Processed as LF. |
| FF | Form feed | Processed as LF. |
| CR | Carriage return | Moves cursor to left margin on current line. |
| SO (LS1) | Shift out (lock shift G1) | Invokes G1 character set into GL. G1 is designated by a select-character-set (SCS) sequence. |

CO (ASCII) Control Characters Recognized (Cont)

| Mnemonic | Name | Action |
|-----------------|--------------------------------|---|
| SI (LS0) | Shift in (lock shift G0) | Invokes G0 character set into GL. G0 is designated by a select-character-set (SCS) sequence. |
| DC1 | Device control 1 | Also referred to as XON. If XOFF support is enabled, DC1 clears DC3 (XOFF), causing the terminal to continue send- ing characters (keyboard send- ing unlocks) unless KAM mode is currently set. |
| DC3 | Device control 3 | Also referred to as XOFF. If XOFF support is enabled, DC3 causes the terminal to stop sending characters until a DC1 control character is received. |
| CAN | Cancel | If received during an escape or control sequence, terminates and cancels the sequence. No error character is displayed. If received during a device control string, the DCS is ter- minated and no error character is displayed. |
| SUB | Substitute | If received during escape or control sequence, terminates and cancels the sequence. Causes a reverse question mark to be displayed. If re- ceived during a device control sequence, the DSC is termi- nated and reverse question mark is displayed. |
| ESC | Escape | Processed as escape sequence introducer. Terminates any escape, control or device control sequence which is in progress. |
| DEL | Delete | Ignored when received. Note: May not be used as a time fill character. |

C1 Control Characters Recognized

| Mnemonic | Equivalent 7-Bit Code Extension | Name | Action |
|-----------------|--|-----------------------|--|
| IND | ESC D | Index | Moves cursor down one line in same column. If cursor is at bottom margin, screen performs a scroll up. |
| NEL | ESC E | Next line | Moves cursor to first position on next line. If cursor is at bottom margin, screen performs a scroll up. |
| HTS | ESC H | Horizontal tab set | Sets one horizontal tab stop at the column where the cursor is. |
| RI | ESC M | Reverse index | Moves cursor up one line in same column. If cursor is at top margin, screen performs a scroll down. |
| SS2 | ESC N | Single shift G2 | Temporarily invokes G2 character set into GL for the next graphic character. G2 is designated by a select-character-set(SCS) sequence. |
| SS3 | ESC O | Single shift G3 | Temporarily invokes G3 character set into GL for the next graphic character. G3 is designated by a select-character-set(SCS) sequence. |
| DCS | ESC P | Device control string | Processed as opening delimiter of a device control string for device control use. |

C1 Control Characters Recognized (Cont)

| Mnemonic | Equivalent 7-Bit Code Extension | Name | Action |
|----------|---------------------------------|-----------------------------|---|
| CSI | ESC [| Control sequence introducer | Processed as control sequence introducer. |
| ST | ESC / | String terminator | Processed as closing delimiter of a string opened by DCS. |

CHARACTER SET SELECTION (SCS)

Designating Hard Character Sets

Use the following list of escape sequence formats to designate hard character sets as G0 through G3.

| Escape Sequence | Designate As: |
|-----------------|---------------|
| ESC ({final} | G0 |
| ESC) {final} | G1 |
| ESC * {final} | G2 |
| ESC + {final} | G3 |

The following is a list of available character sets and their associated final character.

| Character Sets | Final Character |
|-------------------------------------|---|
| ASCII | B |
| DEC supplemental (VT200 mode only) | < |
| DEC special graphics | 0 |
| National replacement character sets | NOTE Only one national character set is available for use at any one time (national mode). |
| British | A |
| Dutch | 4 |
| Finnish | C or 5 |
| French | R |
| French Canadian | Q |
| German | K |
| Italian | Y |

| Character Sets | Final Character |
|------------------|-----------------|
| Norwegian/Danish | E or 6 |
| Spanish | Z |
| Swedish | H or 7 |
| Swiss | = |

Examples

| | |
|---------------|---------|
| ASCII as G0 | ESC (B |
| British as G3 | ESC * A |

Designating Soft (Down-Line-Loadable) Character Sets

| Escape Sequence | Designate As: |
|-----------------|---------------|
| ESC (Dscs | G0 |
| ESC) Dscs | G1 |
| ESC * Dscs | G2 |
| ESC + Dscs | G3 |

Dscs can consist of zero, one, or two intermediate characters and a final character.

Intermediate characters are in the range of 2/0 to 2/15; final characters are in the range of 3/0 to 7/14. (See ASCII Code Table for column/row notation.)

Invoking Character Sets Using Lock Shifts

| Control Name | Coding | Function |
|-----------------------------|--------|---|
| LS0 – lock shift G0 | SI | Invoke G0 into GL (default). |
| LS1 – lock shift G1 | SO | Invoke G1 into GL. |
| LS1R – lock shift G1, right | ESC ~ | Invoke G1 into GR (VT200 mode only). |
| LS2 – lock shift G2 | ESC n | Invoke G2 into GL (VT200 mode only). |
| LS2R – lock shift G2, right | ESC } | Invoke G2 into GR (default, VT200 mode only). |
| LS3 – lock shift G3 | ESC o | Invoke G3 into GL (VT200 mode only). |
| LS3R – lock shift G3, right | ESC | Invoke G3 into GR (VT200 mode only). |

Invoking Character Sets Using Single Shifts

| Control Name | Coding | Function |
|-----------------------|---------------|--|
| SS2 – single shift G2 | SS2 ESC N | Invokes G2 into GL for the next graphic character. |
| SS3 – single shift G3 | SS3 ESC O | Invokes G3 into GL for the next graphic character. |

Select C1 Control Transmission

| Control Name | Sequence* | Action |
|---------------------------------------|------------------|--|
| 7-bit C1 control transmission (S7C1T) | ESC sp F | Converts all C1 codes returned to the application to their equivalent 7-bit code extensions. |

NOTE

The S7C1T sequence is ignored when the terminal is in VT100 or VT52 mode.

| | | |
|---------------------------------------|----------|--|
| 8-bit C1 control transmission (S8C1T) | ESC sp G | Returns C1 codes to the application without converting them to their equivalent 7-bit code extensions. |
|---------------------------------------|----------|--|

* sp is a space character

Terminal Modes

| Name | Mnemonic | Set Mode | Reset Mode* |
|-----------------------|--------------------|---------------------------|--------------------------------|

| Auto repeat† | DECARM | On CSI ? 8 h | Off CSI ? 8 l |
| Print form feed | DECPFF | On CSI ? 18 h | Off CSI ? 18 l |
| Print extent | DECPEX | Full screen CSI ? 19 h | Scrolling region CSI ? 19 l |
| Text cursor enable | DECTCEM | On CSI ? 25 h | Off CSI ? 25 l |
| Keypad | DECKPAM DECKPNM | Application ESC = | Numeric ESC > |
| Character set | DECNRCM | National CSI ? 42 h | Multinational CSI ? 42 l |

* The last character of each sequence is lowercase L (6/12).

† User preference feature

Cursor Positioning

| Name | Control Character | Sequence | Action |
|--|-------------------|---------------|--|
| Cursor up (CUU) | - | CSI Pn A | Moves cursor up Pn lines in the same column. |
| Cursor down (CUD) | - | CSI Pn B | Moves cursor down Pn lines in the same column. |
| Cursor forward (CUF) | - | CSI Pn C | Moves cursor right Pn columns. |
| Cursor backward (CUB) | - | CSI Pn D | Moves cursor left Pn columns. |
| Cursor position (CUP) | - | CSI PI ; Pc H | Moves cursor to line PI, column Pc. The numbering of the lines and columns depends on the state (set/reset) of origin mode (DECOM). |
| Horizontal and vertical position (HVP) | - | CSI PI ; Pc f | Moves cursor to line PI, column Pc. The numbering of the lines and columns depends on the state (set/reset) of origin mode (DECOM). Digital recommends using CUP instead of HVP. |
| Index (IND) | IND | ESC D | Moves cursor down one line in the same column. If the cursor is at the bottom margin the screen performs a scroll-up. |
| Reverse index (RI) | RI | ESC M | Moves cursor up one line in the same column. If the cursor is at the top margin the screen performs a scroll-down. |

Cursor Positioning (Cont)

| Name | Control Character | Sequence | Action |
|------------------------|--------------------------|-----------------|--|
| Next line (NEL) | NEL | ESC E | Moves the cursor to the first position on the next line. If the cursor is at the bottom margin the screen performs a scroll-up. |
| Save cursor (DECSC) | - | ESC 7 | Saves the following in terminal memory. <ul style="list-style-type: none">• cursor position• graphic rendition• character set shift state• state of wrap flag• state of origin mode• state of selective erase |
| Restore cursor (DECRC) | - | ESC 8 | Restores the states described for (DECSC) above. If none of these characteristics were saved: the cursor moves to home position, origin mode is reset, no character attributes are assigned, and the default character set mapping is established. |

Tab Stops**NOTE**

These sequences are affected by the user preference lock in set-up.

| Name | Control Character | Sequence | Action |
|--------------------------|--------------------------|-----------------|--|
| Horizontal tab set (HTS) | HTS | ESC H | Sets a tab stop at the current column. |
| Tabulation clear (TBC) | - | CSI g | Clears a horizontal tab stop at cursor position. |
| | | CSI 0 g | Clears a horizontal tab stop at cursor position. |
| | | CSI 3 g | Clears all horizontal tab stops. |

Select Graphic Rendition (SGR)

You can select one or more character renditions at a time using the following format.

CSI Ps ; ... Ps m

When you use multiple parameters, they are executed in sequence. The effects are cumulative. For example, to change from increased intensity to blinking-underlined, you can use:

CSI 0 ; 4 ; 5 m

When you select a single parameter, no delimiter (3/11) is used.

| Ps | Action |
|-----------|-----------------------------------|
| 0 | All attributes off. |
| 1 | Display at increased intensity. |
| 4 | Display underscored. |
| 5 | Display blinking. |
| 7 | Display negative (reverse) image. |
| 2 2 | Display normal intensity. |
| 2 4 | Display not underlined. |
| 2 5 | Display not blinking. |
| 2 7 | Display positive image. |

Select Character Attributes (DECSCA)

You can select all subsequent characters to be erasable or not erasable using the following format. (See "Erasing" section.)

NOTE

This sequence is supported only in VT200 mode.

CSI Ps " q

where:

| Ps | Action |
|-----------|--|
| 0 | All attributes off. (Does not apply to SGR.) |
| 1 | Designate character as "not erasable" by DECSEL/DECSED (attribute on). |
| 2 | Designate character as "erasable" by DECSEL/DECSED (attribute off). |

Line Attributes

| Name | Sequence | |
|--------------------------------|---|--------------------|
| | Top Half | Bottom Half |
| Double-height line (DECDHL) | ESC # 3 | ESC # 4 |
| | The same character must be used on both lines to form full character. If the line was previously single-width, single-height, all characters to the right of center are lost. | |
| Single-width line (DECSWL) | ESC # 5 | |
| Double-width line (DECDWL) | ESC # 6 | |

Editing

| Name | Sequence | Action |
|--|-----------------|---|
| Insert line (IL) | CSI Pn L | Inserts Pn lines at the cursor. |
| Delete line (DL) | CSI Pn M | Deletes Pn lines starting at the line with the cursor. |
| Insert characters (ICH) (VT200 mode only) | CSI Pn @ | Insert Pn blank characters at the cursor position, with the character attributes set to normal. |
| Delete character (DCH) | CSI Pn P | Deletes Pn characters starting with the character at the cursor position. |

Erasing

| Name | Sequence | Action |
|--|-----------------|---|
| Erase character (ECH) (VT200 mode only) | CSI Pn X | Erases characters at the cursor position and the next n-1 character. |
| Erase in line (EL) | CSI K | Erases from the cursor to the end of the line, including the cursor position. |
| | CSI 0 K | Same as above. |
| | CSI 1 K | Erases from the beginning of the line to the cursor, including the cursor position. |
| Erase in display (ED) | CSI 2 K | Erases the complete line. |
| | CSI J | Erases from the cursor to the end of the screen, including the cursor position. |
| | CSI 0 J | Same as above. |
| | CSI 1 J | Erases from the beginning of the screen to the cursor, including the cursor position. |
| | CSI 2 J | Erases the complete display. |

Erasing (Cont)

| Name | Sequence | Action |
|---|-----------------|--|
| Selective erase in line (DECSEL) (VT200 mode only) | CSI ? K | Erases all "erasable" characters (DECSCA) from the cursor to the end of the line. |
| | CSI ? 0 K | Same as above. |
| | CSI ? 1 K | Erases all "erasable" characters (DECSCA) from the beginning of the line to and including the cursor position. |
| Selective erase in display (DECSED) (VT200 mode only) | CSI ? 2 K | Erases all "erasable" characters (DECSCA) on the line. |
| | CSI ? J | Erases all "erasable" characters (DECSCA) from and including the cursor to the end of the screen. |
| | CSI ? 0 J | Same as above. |
| | CSI ? 1 J | Erases all "erasable" characters (DECSCA) from the beginning of the screen to and including the cursor. |
| | CSI ? 2 J | Erases all "erasable" characters (DECSCA) in the entire display. |

Set Top and Bottom Margins (DECSTBM)

CSI Pt ; Pb r

Selects top and bottom margins defining the scrolling region. Pt is the line number of the first line in the scrolling region. Pb is the line number of the bottom line. If you do not select either Pt or Pb, they default to top and bottom respectively. Lines are counted from 1.

Printing

Before you select a print operation, check printer status using the print status report (DSR). (See "Reports" section.)

| Name | Sequence | Action |
|--------------------|-----------------|---|
| Auto print mode | CSI ? 5 i | Turns on auto print mode. All following display lines print when you move the cursor off the line using a line feed, form feed, vertical tab, or auto wrap. The printed line ends with a carriage return and the character (LF, FF, or VT) which moved the cursor off the previous line. Auto wrap lines end with a line feed. |
| | CSI ? 4 i | Turns off auto print mode. |
| Printer controller | CSI 5 i | Turns on printer controller mode. The terminal sends received characters to the printer without displaying them on the screen. All characters and character sequences, except NUL, XON, XOFF, CSI 5 i, and CSI 4 i are sent to the printer. The terminal does not insert or delete spaces, or provide line delimiters, or select the correct printer character set. Printer controller mode has a higher priority than auto print mode. It can be selected during auto print mode. When in printer controller mode, keyboard activity continues to be directed to the host. |
| | CSI 4 i | Turns off printer controller mode. |
| Print cursor line | CSI ? 1 i | Prints the display line containing the cursor. The cursor position does not change. The print-cursor-line sequence is complete when the line prints. |

Printing (Cont)

| Name | Sequence | Action |
|--------------|----------|---|
| Print screen | CSI i | Prints the screen display (full screen or scrolling region depending on the print extent DECEXT selection). Printer form feed mode (DECPFF) selects either a form feed (FF) or nothing as the print terminator. The print screen sequence is complete when the screen prints. |
| | CSI 0 i | Same as above. |

User Defined Keys (DECUDK)

The device control string format for down-line-loading UDK functions is:

DCS Pc;PI | Ky1/st1;ky2/st2;...kyn/stn ST

where:

Pc Meaning

| | |
|------|--|
| None | Clear all keys before loading new values. |
| 0 | Clear all keys before loading new values. |
| 1 | Load new key values, clear old only where defined. |

PI Meaning

| | |
|------|---|
| None | Lock the keys against future redefinition. |
| 0 | Lock the keys against future redefinition. |
| 1 | Do not lock the keys against future redefinition. |

| Key | Value (kyn) | Key | Value (kyn) |
|-----|-------------|------|-------------|
| F6 | 17 | F14 | 26 |
| F7 | 18 | HELP | 28 |
| F8 | 19 | DO | 29 |
| F9 | 20 | F17 | 31 |
| F10 | 21 | F18 | 32 |
| F11 | 23 | F19 | 33 |
| F12 | 24 | F20 | 34 |
| F13 | 25 | | |

Stn is a string of hex pairs of ASCII characters that define the specified key.

NOTE

To access the programmed values of the keys, you type Shift - (function key).

Down-Line-Loading Characters (DRCS)

You can down-line-load your DRCS character set using the following DECDDL device control string format.

DCS Pfn;Pcn;Pe;Pcms;Pw;Pt { Dscs Sxpb1;Sxpb2;...;Sxbpn ST

Parameter descriptions are as follows.

DECDDL Parameter Characters

| Parameter | Name | Description |
|-----------|---------------------------|---|
| Pfn | Font number | 0 and 1. |
| Pcn | Starting character number | Selects starting character in DRCS font buffer to be loaded. |
| Pe | Erase control | 0 = erase all characters in this DRCS set 1 = erase only the characters that are being reloaded 2 = erase all characters in all DRCS sets (this font buffer number and other font buffer numbers) |
| | Character Matrix size | 0 = device default (7 × 10) 1 = (not used) 2 = 5 × 10 3 = 6 × 10 4 = 7 × 10 |
| Pw | Width attribute | 0 = device default (80 columns) 1 = 80 column 2 = 132 column |
| | | |
| Pt | Text/full-cell | 0 = device default (text) 1 = text 2 = full-cell (not used) |
| | | |
| | | |

Dscs defines the character set name for the soft font, and is used in the SCS (select character set) escape sequence.

Sxpb1;Sxpb2;...;Sxbpn are sixel bit patterns (1 to 94 patterns) for characters separated by semicolons. Each sixel bit pattern has the form:

S...S/...S

where the first S...S represents the upper columns (sixel) of the DRCS character, the slash advances the sixel pattern to the lower columns of the DRCS character, and the second S...S represents the lower columns (sixel) of the DRCS.

Clearing a Down-Line-Loaded Character Set

You can clear a character set that you have down-line-loaded using the following DECCLD control sequence.

```
DCS 1;1;2 { sp @ ST
```

Down-line-loaded character sets are also cleared by the following actions.

- Performing the power-up self-test.
- Using the set-up “Recall” or “Default” features.
- Using RIS or ESC c sequences.

Reports

Device Attributes (DA)

| Communication | Sequence | Meaning |
|--|------------------------------|--|
| Host to VT220 (primary DA request) | CSI c or CSI 0 c | “What is your service class code and what are your attributes?” |
| VT220 to host (primary DA response) | CSI ? 62; 1; 2; 6; 7; 8; 9 c | “I am a service class 2 (VT200 family) terminal (62) with 132 columns (1), printer port (2), selective erase (6), DRCS (7), UDK (8). I support 7-bit national replacement character sets (9).” |
| Host to VT220 (secondary DA request) | CSI > c or CSI > 0 c | “What type of terminal are you, what is your firmware version, and what hardware options do you have installed?” |
| VT220 to host (secondary DA response) | CSI > 1; Pv; Po c | “I am a VT220 (identification code of 1, my firmware version is _____ (Pv), and I have PO options installed. |

EXAMPLE: CSI>1;10;0c = VT220 version 1.0, no options

NOTE

If the terminal is in VT100 mode and an ID other than VT220 ID is selected, then the following primary exchanges apply.

| Communication | Sequence | Meaning |
|--|-----------------|-----------------------------------|
| VT220 to host (VT100 ID selected in set-up) | ESC [? 1; 2 c | "I am a VT100 terminal with AVO." |
| VT220 to host (VT101 ID selected in set-up) | ESC [? 1; 0 c | "I am a VT101 terminal." |
| VT220 to host (VT102 ID selected in set-up) | ESC [? 6 c | "I am a VT102 terminal." |

Device Status Report (DSR)

| Communication | Sequence | Meaning |
|---|-----------------|--|
| Host to VT220 (request for terminal status) | CSI 5 n | "Please report your operating status using a DSR control sequence. Are you in good operating condition or do you have a malfunction?" |
| VT220 to host (DA response) | CSI 0 n | "I have no malfunction." |
| | CSI 3 n | "I have a malfunction." |
| Host to VT220 (request for cursor position) | CSI 6 n | "Please report your cursor position using a CPR (not DSR) control sequence." |
| VT220 to host (CPR response) | CSI Pv; Ph R | "My cursor is positioned at _____ (Pv); _____ (Ph)." Where: Pv = vertical position (row) Ph = horizontal position (column) |

DSR – Printer Port

| Communication | Sequence | Meaning |
|--|-----------------|---|
| Host to VT220 (request for printer status) | CSI ? 15 n | “What is the printer status?” |
| VT220 to host | CSI ? 13 n | “DTR has not been asserted on the printer port since power up or reset—in essence, I have no printer.” |
| | CSI ? 10 n | “DTR is asserted on the printer port. The printer is ready.” |
| | CSI ? 11 n | “DTR is not currently asserted on the printer port. The printer is not ready.” |

DSR – User Defined Keys (VT200 mode only)

| Communication | Sequence | Meaning |
|--|-----------------|---|
| Host to VT220 (request for UDK status) | CSI ? 25 n | “Are User Defined Keys locked or unlocked?” |
| VT220 to host | CSI ? 20 n | “User Defined Keys are unlocked.” |
| | CSI ? 21 n | “User Defined Keys are locked.” |

DSR – Keyboard Language

| Communication | Sequence | Meaning |
|--|-----------------|--|
| Host to VT220 (request for keyboard language) | CSI ? 26 n | “What is the key- board language?” |
| VT220 to host | CSI ? 27; Pn n | “My keyboard lan- guage is _____ (Pn).” |

where:

| Pn | Language |
|-----------|-----------------|
| 0 | Unknown* |
| 1 | North American |
| 2 | British |
| 3 | Flemish |
| 4 | French Canadian |
| 5 | Danish |
| 6 | Finnish |
| 7 | German |
| 8 | Dutch |
| 9 | Italian |
| 10 | Swiss (French) |
| 11 | Swiss (German) |
| 12 | Swedish |
| 13 | Norwegian |
| 14 | French/Belgian |
| 15 | Spanish |

* Sent by a terminal that for some reason cannot determine its keyboard language. The VT220 will never send this response.

Identification (DECID)

ESC Z

Causes the terminal to send a primary DA response sequence. DECID, however, is not recommended. You should use the primary DA request for this purpose.

Terminal Reset

| Name | Sequence | Action |
|---------------------------------|-----------------|---|
| Soft terminal reset (DECSTR) | CSI ! p | Sets terminal to power-up default states |
| Hard terminal reset (RIS) | ESC c | Replaces all set-up parameters with NVR values or power-up default values if NVR values do not exist. |

Tests (DECTST)

The sequence format for invoking terminal tests is as follows.

CSI 4 ; ; Ps y

where:

| Ps | Test |
|-----------|---|
| 0 | Test 1, 2, 3, and 6 |
| 1 | Power-up self-test |
| 2 | EIA port data loopback test |
| 3 | Printer port loopback test |
| 4 | (not used) |
| 5 | (not used) |
| 6 | EIA port modem control line loopback test |
| 7 | 20 mA port loopback test |
| 8 | (not used) |
| 9 | Repeat other test in parameter string |
| 10 and up | (not used) |

NOTE

DECTST causes a communications line disconnect.

Adjustments (DECALN)

ESC # 8 Displays screen alignment pattern (full screen of E's).

VT52 Escape Sequences

| Escape Sequence | Function |
|------------------------|-------------------------------|
| ESC A | Cursor up |
| ESC B | Cursor down |
| ESC C | Cursor right |
| ESC D | Cursor left |
| ESC F | Enter graphics mode |
| ESC G | Exit graphics mode |
| ESC H | Cursor to home |
| ESC I | Reverse line feed |
| ESC J | Erase to end of screen |
| ESC K | Erase to end of line |
| ESC Y Line Column | Direct cursor address |
| ESC Z | Identify |
| ESC = | Enter alternate keypad mode |
| ESC > | Exit alternate keypad mode |
| ESC < | Enter ANSI mode |
| ESC | Enter auto print mode |
| ESC | Exit auto print mode |
| ESC W | Enter printer controller mode |
| ESC X | Exit printer controller mode |
| ESC | Print screen |
| ESC V | Print cursor line |

VT 220

Programmer Pocket Guide Addendum for Models D, E, and F

EK-VT220-HR-002

The information in this addendum applies only to models D, E, and F of the VT220 video terminal. You can identify your model by looking at the label on the rear of the terminal (Figure 1).

All other information in the *VT220 Programmer Pocket Guide* applies to VT220 models A, B, C, D, E, and F.

Figure 1 Identifying the VT220 Model
