## **INTRODUCTION**

The EPSON PX-8 is a general-purpose portable computer driven by an incorporated rechargeable battery. Standard features include a micro cassette drive, ROM capsule and RS-232C interface allowing the machine to independently handle a variety of applications. The system can also be expanded by connecting peripheral equipment such as a printer. Long time steady operation has been realized by employing the battery-powered supply system with its large capacity of 1100 mAH. A recharge control circuit to protect the battery from overcharge and an auxiliary battery (90 mAH) for backup have been added to enhance reliability.

## 1.3 Major parts

The main unit consists of five parts and a case as shown in Fig. 1-2.

① MAPLE board

A control board realizing compact size and low power consumption with CMOS, flat package type multifunction gate arrays and various chips on it.

② Micro cassette

Consists of control board and driving mechanism. Reads and writes data from and to the tape.

③ Keyboard

Has 72 keys on it (73 keys for Japanese use), 9 of which are function keys. Also has three indicators which show the input mode.

④ LCD

Consists of 480 (width) × 64 (height) dots, can display a total of 480 characters.

⑤ Main battery

A rechargeable Ni-cd battery with a capacity of 1100 mAH. It supplies power necessary for the normal circuit operation.

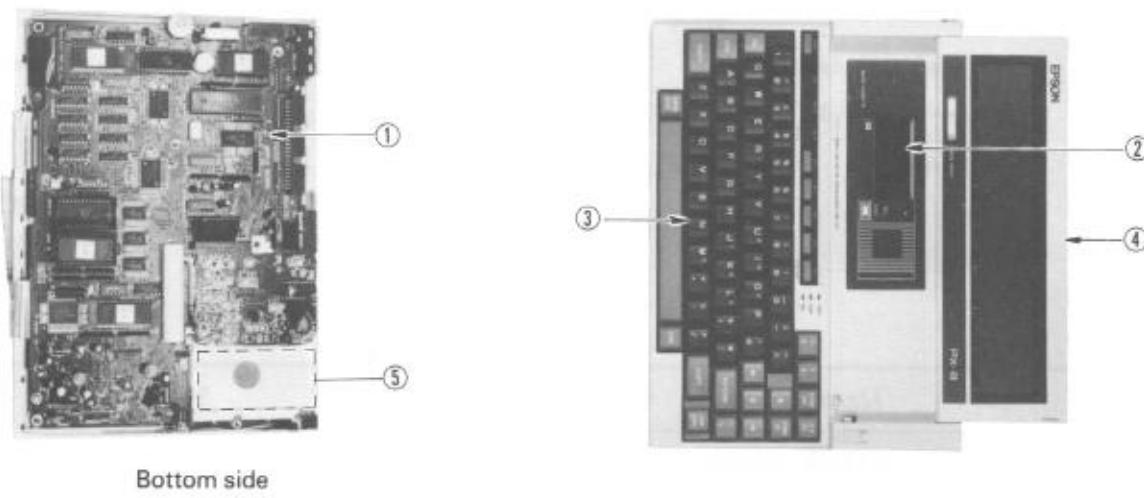

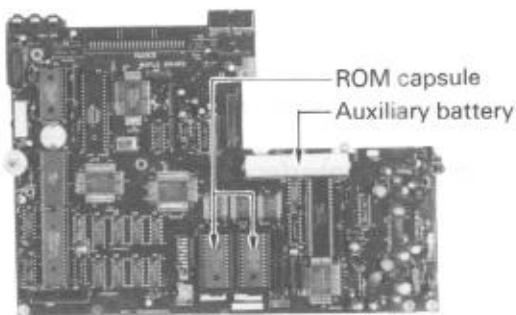

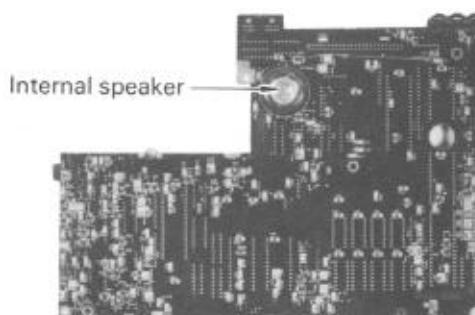

Fig. 1-2

### 1.3.1 MAPLE board

Power consumption is considerably reduced by employing power-saving C-MOS. On-board integration has become easy by employing customized LSIs and chips. Although both sides of the boards are utilized, the back side mainly includes chips such as resistors and capacitors.

Fig. 1-3

External interfaces (shown in Table 1-4) and two ROM capsules on the board provide a system configuration suitable for your needs or implementation of an application program. An auxiliary rechargeable battery of 90 mAH is also incorporated which supplies power in order to ensure normal circuit operation when the voltage of the main battery falls down below a certain value.

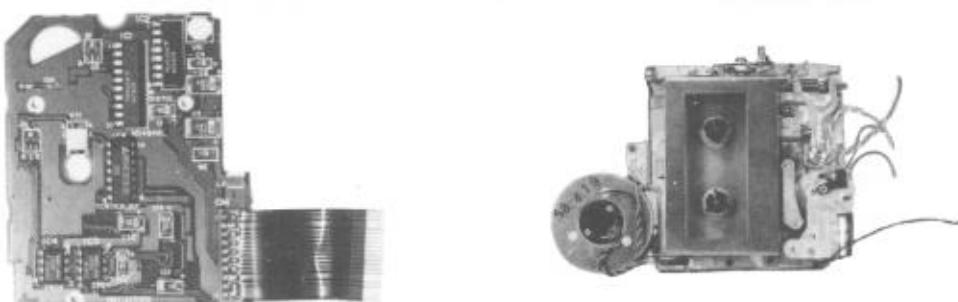

**Table 1-4 External Interfaces**

Item	Function	Note
RS-232C	110 ~ 19200 BPS, RS-232C level	Operator-selectable: transmission speed, X-ON/OFF, etc.,
SERIAL	38400 BPS MAX., RS-232C level	Operator-selectable: transmission speed, X-ON/OFF, etc.,
Bar code	Read at TTL level	Read program and bar code reader are required.
Analog input	Analog or joystick input (with trigger)	Analog input line has +5V pull up function.
External speaker	0 ~ 6V output	8Ω 0.2W

### 1.3.2 Microcassette

The microcassette consists of a control board and drive mechanism. Operations such as FF, REW, etc. are controlled by software, resulting in high reliability compared with manual control. Increased chip implementation has permitted a reduction in size of the control board.

This cassette drive operates at a tape speed of 2.4 cm/s, and reads or writes data effectively utilizing a tape counter and directory which contains file names, file starting addresses, etc.

**Fig. 1-4**

Mechanical components include a tape drive motor and its driving mechanism, R/W heads and their mechanisms, reels, etc. The control board controls the revolving speed of motor, load/unload of R/W heads and R/W operation.

To enable sound output, it provides signals to an internal or external speaker after amplifying them twice. For reading data, duplicated amplification circuits eliminate high frequency component (noise) and detect the peak of signal to ensure highly reliable sound output.

### 1.3.3 Keyboard

Matrix keyboard uses mechanical contact switches. Switches, reverse-current protection diode and mode indication LED lamps are implemented on the control board.

Fig. 1-5

### 1.3.4 LCD

The LCD is a twist pneumatic (TNM) effect type liquid-crystal display. The screen angle can be changed arbitrarily. VIEW ANGLE volume is provided to correct the change of liquid crystal display condition caused by temperature rise or fall.

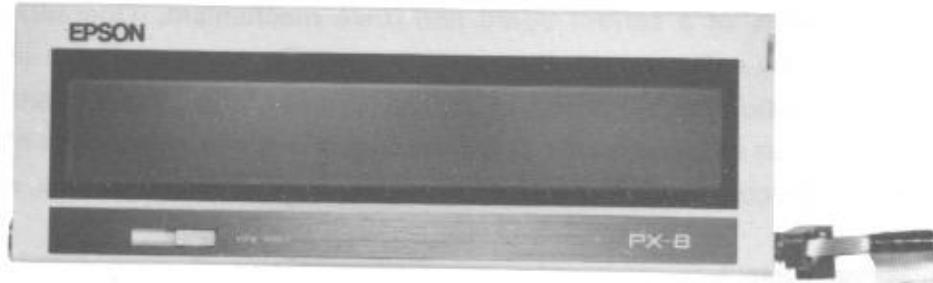

Fig. 1-6

### 1.3.5 Main battery

The main battery is Ni-Cd with a nominal voltage of 4.8V. When the battery is fully charged, the voltage is 5.0V or more, enough to provide power for circuit operation. The battery can be easily removed and replaced by removing the battery cover on the bottom of the unit.

Fig. 1-7
