

The more significant the innovation, the more the corporation comes to depend on it.

Distributed Processing.

Distributed data processing represents a significant advance in an organization's ability to monitor and control its own operations. So significant, in fact, that a large decentralized corporation quickly comes to depend on its distributed processing network in the same way that a biological organism depends on its nervous system. For this reason, it is vitally important that such a network be supported by a fast and efficient field engineering team.

Field Engineering. Four-Phase Systems provides 24-hour-a-day maintenance support to distributed processing sites from more than seventy field engineering offices nationwide. The Four-Phase field engineering organization is structured to support network operations, and combines such unique features as a national alert center, remote diagnostics, and local-regional-national spare parts inventory to insure the highest reliability in the corporate nervous systems we build and support.

This team of field engineering professionals helps Four-Phase distributed processing systems achieve better than 99% uptime nationwide in typical multi-shift use. And every service incident which does occur is analyzed by the Four-Phase field engineering support group to determine whether maintenance response was timely and efficient and to supply statistical data to guide our product engineers toward even higher equipment reliability.

Four-Phase Systems.

Who uses Four-Phase equipment today? Over 500 major organizations. Including ten airlines. Thirty insurance companies. Forty banks. Fifty government agencies. And more than a hundred of America's leading manufacturing corporations.

Why has Four-Phase succeeded in the hotly competitive world of business data processing? A primary reason is the fact that the Four-Phase product line was designed from scratch for its intended application... not "assembled" from commercially available electronic logic components. Of all the business computer manufacturers in America, only two have always designed and produced the integrated circuits which are the brains of their products... Four-Phase and IBM.
