IBM 5291 Display Station Parts Catalog

S131-0635-0

IBM 5291 Display Station Parts Catalog

Preface

The purpose of this publication is to list and to show illustrations of all replaceable assemblies, subassemblies and detail parts released to Production Control on or before 1 January 1982 of the IBM 5291 Display Station. This publication is for the use of an IBM customer engineer or a service representative.

First Edition (January 1982)

Changes are periodically made to the information herein; before using this publication in connection with the operation of IBM systems, be sure you have the latest edition.

Use this publication only for the purposes stated in the *Preface*.

This publication could contain technical inaccuracies or typographical errors. Use the Reader's Comment Form at the back of this publication. If the form has been removed address your comments to IBM Corporation, Publications, Department 245, Rochester, Minnesota 55901. IBM may use and distribute any of the information you supply in any way it believes appropriate without incurring any obligation whatever. You may, of course, continue to use the information you supply.

Document Storage Tray	7362999

HOW TO USE THIS PARTS CATALOG

PART 1

To find parts quickly, a general understanding of the structure of this catalog is necessary. The catalog is divided into three major sections:

- The Visual Index, containing overall views of the machine, with call-outs pointing to detailed figures.
- The Catalog Section, containing a pictorial breakdown of assemblies and subassemblies.
- The Numerical Index, which is a numerical list of all parts used in the machine, with cross-references to the figure on which the part is found.

VISUAL INDEX

The Visual Index, located before the Catalog Section, contains a reduced illustration of every figure in the Catalog Section. The reduced illustrations are tied together with flow arrows to form a natural progression from large assemblies to small assemblies and possibly subassemblies. In effect, a visual table of contents is formed by the Visual Index illustrations.

CATALOG SECTION

The Catalog Section contains the full-sized illustrations previously noted in the Visual Index. Index numbers on figures refer to corresponding entries in the Group Assembly Parts List accompanying each figure. Refer to part II for explanation of terms used in the Group Assembly Parts List.

ATTACHING PARTS LIST

The Attaching Parts List contains common screws, nuts, washers, etc. that are used in the machine. Index numbers for attaching parts are on the illustration, and the description is in the Attaching Parts List.

NUMERICAL INDEX

The Numerical Index is located after the Catalog Section and contains a complete list, in numerical order, of all part numbers used on the machine. Listed with the part number is the index and figure number on which the part is illustrated. The numerical index makes it possible to locate a part when only the part number is known.

STACKED INDEX NUMBERS

Stacked Index numbers are used when showing a part and its attaching hardware. The sequence of a typical stack is shown at the right. The circled index number indicates the assembly is broken down within the figure.

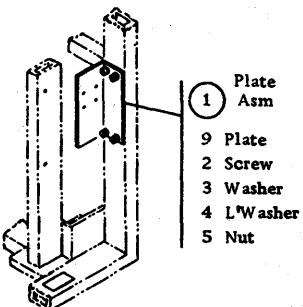

ILLUSTRATION NOTES

Cross-reference notes are directly on the illustration. The illustration's next higher assembly reference, normally located in the upper left corner of the page will read: "For Parts Not Shown See Figure X". If an assembly is referenced to a lower level figure, the note located next to the index number will read: "5 See Figure X."

DOUBLE LINED DETAIL BOX

The double lined box differentiates between parts shown on the basic model and parts related to a level and/or feature difference. An explanation of the level or feature difference is given in the double lined box.

FINDING A PART

The Visual Index is the starting point for locating a part. The illustrations in the Visual Index are reduced versions of all illustrations in the Catalog Section; therefore, the illustrations can be used to find the assembly containing the desired part. Use references to the detailed figure in the Catalog Section, or to another Visual Index illustration, to determine location of part number.

Once the detailed figure in the catalog section is determined, finding the part on the figure and referring to the listing for the part number and description is all that is required in most cases. If the first catalog section figure referenced shows the assembly containing the required part, the index number for the assembly will reference a lower-level figure where the assembly is broken down to its component parts. If the figure referenced by the Visual Index contains neither the part nor an assembly containing the part, it is then necessary to go to the next higher assembly figure. This figure should then contain the part or an assembly containing the part; if not, an even higher level figure must be used. Refer back to the Visual Index for some other figure that could show the desired part.

Note: Many detailed parts are unavailable, because they are part of an inseparable assembly (two or more parts welded or bonded together), or because they are part of an assembly purchased as a unit. If parts are found on a welded or bonded assembly, the following note follows the description of the assembly: "Assembly components are not replaceable." If the part is found on a purchased assembly, and the detail parts of this assembly do not have IBM part numbers, the note following the assembly description will read: "Assembly components are not available." In either case, you need to obtain the part number of the assembly, rather than the detailed part.

EXAMPLE FOR ORDERING PARTS

FIGURE- INDEX NUMBER	PART NUMBER	UNITS PER ASM.	DESCRIPTION FOR FIGURE 25			
			1	2	3	4
25	2592881					
			FAN ASM 50 HZ FOR NEXT HIGHER ASM SEE LIST 23 AND FOR ILLUSTRATION SEE FIG. 25			
- 1	2172168	1	-	-	-	-
- 2	2592882	1	-	-	-	-
- 3	2592883	1	-	-	-	-
- 4	2591431	1	-	-	-	-
- 5	334832	1	-	-	-	-
- 6	1168117	1	-	-	-	-
- 7	1168118	3	-	-	-	-
- 8	2591402	1	-	-	-	-
			FOR ATTACHING PARTS, INDEX NOS. 181 AND ABOVE, SEE LIST 78			

If the entire fan is required, part number 2592881 should be ordered (all one dot items will be received). If only the subassembly is required, part number 2591431 should be ordered (all two dot items will be received). Each part may be ordered individually.

Note: If you order a part that requires a label, make sure you order the label in the correct language. For example: A part of a Quebec machine should have a French Canadian language label rather than a French language label.

HOW TO USE THIS PARTS CATALOG

Part II

(A) AR

As Required (AR) in the units per assembly column denotes that the quantity is used as required.

(B) ATT PT

Attaching Parts: These parts are used to attach a subassembly to an assembly. The attaching parts are listed in the last list just before the numeric index. Special attaching parts are listed with the figure.

(C) INDENTURE

The relationship of a part to its next higher assembly is indicated by indentures. For example:

1 2 3 4

Unit

- Assemblies and Detail Parts of Unit
- Attaching Parts for Assemblies & Detail Parts
- Subassemblies
- Attaching Parts of Subassemblies
- · · Detail Parts for Subassemblies, etc.
