QUAD RS 232C LINE CONDITIONING MODULE (LCM) INSTALLATION SPECIFICATION

INTRODUCTION

This specification provides the necessary information for the installation of the 02-380 Quad RS232C Line Conditioning Module (LCM). The LCM assembly consists of one standard 35-579 half board and two 17-354F01 cables. The half board must be strapped to a blank half board (INTERDATA 16-398 Half Board Kit) or an active half board (i.e. Line Frequency Clock) to be installed in a chassis designed for full boards. The Quad RS232C LCM board may be used in either the right or left half position, as required. Refer to Figure 1.

NOTE: 35-579 HALF BOARD CAN BE LOCATED ON
EITHER SIDE.

Figure 1. Half Board Assembly

INSTALLATION

Unpacking Instructions

When the Quad RS232C LCM is shipped with a system, it is installed at the factory so there is no special unpacking procedure. It is only necessary to insure that the module is properly seated in its connectors. If the module assembly is purchased separately, it should be unpacked carefully and inspected for damage prior to installation.

Location

The 35-579 QUAD RS 232C LCM half board, strapped to a blank or active half board, may be installed in any I/O slot. However, it should be located within one or two slots of its associated INTERDATA Communication Adapter. After installing the module, do not remove the factory installed RACK0/TACK0 strap located on the back panel between Terminals 222 and 122 of the selected slot.

Cables and Connectors

The 17-354 and 17-355 cables are connected as shown in Figure 2. The configuration as shown has the ability to support two RS232C or CCITT V.24 type lines.

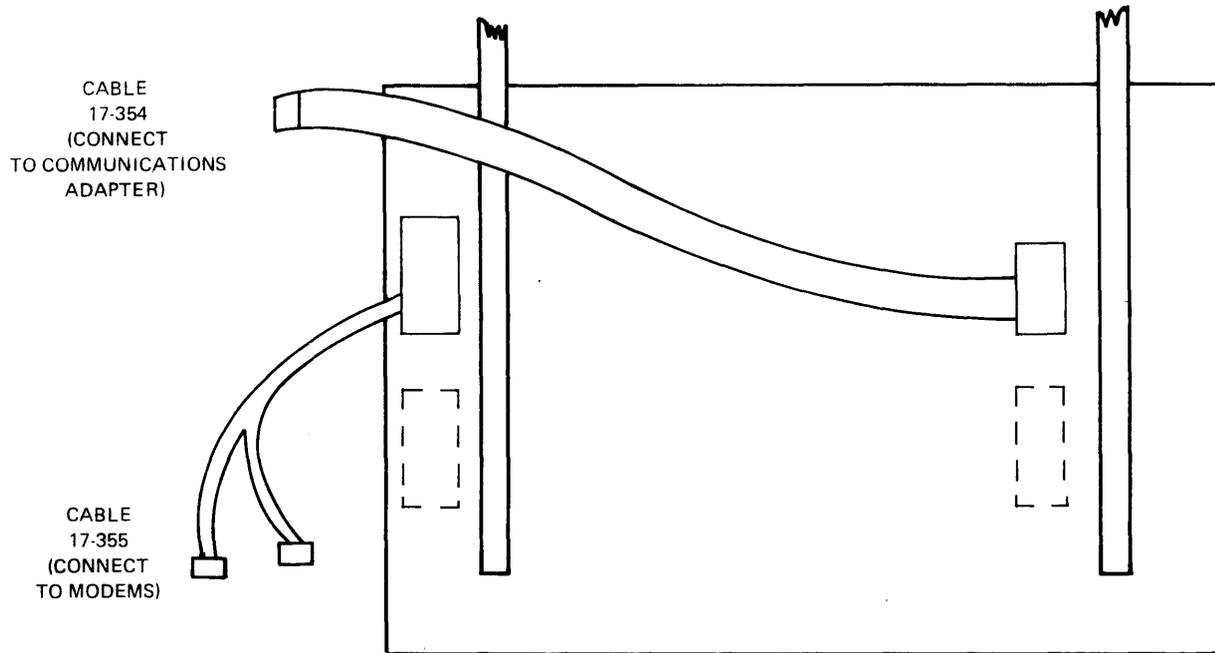

Figure 2A. Cable Connections (02-380A20)

NOTE

Cable 17-355 is not supplied with the LCM. It is a separately purchased item. Each 17-355 cable terminates two modems.

INSTALLATION CHECK

Proper operation of the QUAD RS 232C LCM card is verified at INTERDATA prior to shipment and no additional installation checks are necessary by the user.

QUAD RS 232C LINE CONDITIONING MODULE (LCM) MAINTENANCE SPECIFICATION

INTRODUCTION

The 02-380 Quad RS232C Line Conditioning Module (LCM) is a 7 inch printed circuit board used to convert TTL logic levels into RS232C or CCITT V.24 Logic levels.

DESCRIPTION

Refer to Figure 1 for the following description.

The Quad RS232C LCM card provides the ability to convert TTL Logic levels provided by an INTERDATA Communication Adapter into logic levels compatible with EIA RS232C and CCITT V.24 Specifications. The Quad RS232C LCM card provides the ability to terminate up to 4 modems or communication lines. All the interface signals that are defined by the EIA RS232C and CCITT V.24 specifications are not supported by the Quad RS232 LCM card. Various strap options on the Quad RS232C LCM card provide the ability to adequately terminate the majority of modems, either synchronous or asynchronous.

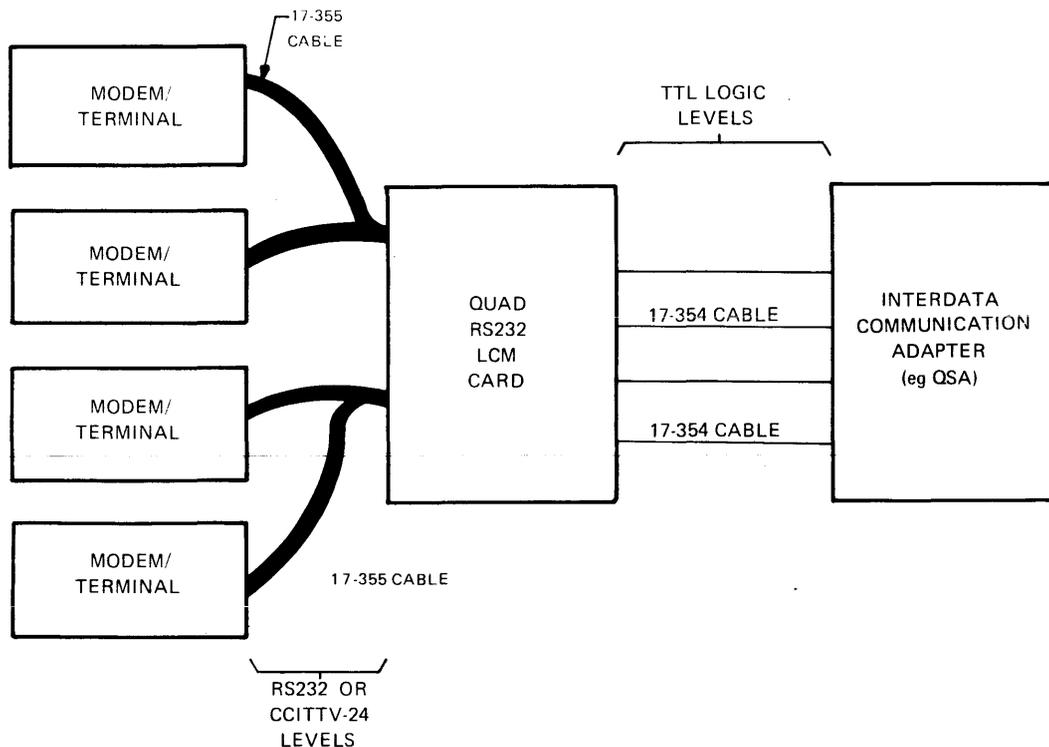

Figure 1. Typical Connection Diagram (02-380A21)

MNEMONICS

The following mnemonics list contains mnemonics that contain an X suffix; the X may represent one of the line designations, A, B, C or D.

AA-X	RS232C designation for protective ground or chassis ground.
AB-X	RS232C designation for signal ground or shield ground.
BA-X	RS232C designation for Transmitted Data. Transmitted Data is serial binary information sent from the INTERDATA Communication Adapter to the modem (RS232C level).
BB-X	RS232C designation for Received Data. Received Data is serial binary information received by the INTERDATA Communication Adapter from the modem (RS232C level).
CA-X	RS232C designation for Request To Send. Request To Send is a control line activated by the INTERDATA Communication Adapter indicating to the modem a request to transmit data (RS232C level).
CB-X	RS232C designation for Clear To Send. Clear To Send is a control line activated by the modem indicating to the INTERDATA Communication Adapter that the modem is prepared to transmit data from the INTERDATA Communication Adapter (RS232C level).
CC-X	RS232C designation for Data Set Ready. Data Set Ready is a control line from the modem to the INTERDATA Communication Adapter indicating that the modem is on line.
CD-X	RS232C designation for Data Terminal Ready. Data Terminal Ready is a control line from the INTERDATA Communication Adapter to the modem indicating that the Adapter is available (RS232C level).
CE-X	RS232C designation for Ring. Ring is a control line from the modem to the INTERDATA Communication Adapter indicating an attempt to establish a connection (RS232C level).
CF-X	RS232C designation for Received Line Signal Detector. Received Line Signal Detector, or as it is more commonly referred to, "Carrier Off", is a control line from the modem to the INTERDATA Communication Adapter indicating the lack of carrier (RS232C level).
CG-X	RS232C designation for Data Signal Quality Detector. Data Signal Quality Detector is a control line from the modem to the INTERDATA Communication Adapter indicating the probability of error in the data being received by the adapter (RS232C level).
CH-X	RS232C designation for Data Signaling Rate Selector. Data Signaling Rate Selector is a control line from the INTERDATA Communication Adapter to the modem indicating the desire to change the data transfer rate between stations (RS232C level).
CL2SX	Clear To Send; this is the TTL Logic level of CB-X that is sent to the INTERDATA Communication Adapter.
DB-X	RS232C designation for Transmitter Signal Element Timing. Transmitter Signal Element Timing, or as it is more commonly referred to "Transmit Clock", is a data timing signal from the modem to the INTERDATA Communication Adapter which is to clock data transmitted by the Adapter (RS232C level).
DD-X	RS232C designation for Received Signal Element Timing. Received Signal Element Timing, or as it is more commonly referred to, "Received Clock", is a data timing signal from the modem to the INTERDATA Communication Adapter which is used to strobe the data received by the Adapter (RS232C level).
DSRDYX	Data Set Ready; this is the TTL Logic level of CC-X that is sent to the INTERDATA Communication Adapter.
DTRX	Data Terminal Ready; this is the TTL Logic level of CD-X that is received from the INTERDATA Communication Adapter.
RCLKX	Received Clock; this is the TTL Logic level of DD-X that is sent to the INTERDATA Communication Adapter.
RDATAX	Received Data; this is the TTL Logic level of BB-X that is sent to the INTERDATA Communication Adapter.

RINGX	RING; this is the TTL Logic level of CE-X that is sent to the INTERDATA Communication Adapter.
RQ2SX	Request To Send; this is the TTL Logic level of CA-X that is received from the INTERDATA Communication Adapter.
RSPECX	Receive Special; this is the TTL Logic level of an optionally received RS232 signal that is sent to the INTERDATA Communication Adapter.
SBA-X	RS232C designation for Secondary Transmitted Data. Secondary Transmitted Data is serial binary information sent from the INTERDATA Communication Adapter to the modem (RS232C level).
TCLKX	Transmit Clock; this is the TTL Logic level of DB-X that is sent to the INTERDATA Communication Adapter.
TDATAX	Transmit Data; this is the TTL Logic level of BA-X that is received by the INTERDATA Communication Adapter.
TSPECX	Transmit Special; this is the TTL Logic level of an optional signal received from the INTERDATA Communication Adapter that may be converted into an RS232C level.
1SBB-X	RS232C designation for Secondary Received Data. Secondary Received Data is serial binary data sent from the modem to the INTERDATA Communication Adapter.
2SBB-X	Same as 1SBB-X with the exception that the pin designation at the modem connector is different.

QUAD RS 232C LINE CONDITIONING MODULE (LCM) INFORMATION SPECIFICATION

INTRODUCTION

This specification covers aspects of the options available on the QUAD RS 232C Line Conditioning Module (LCM) card and the EIA RS 232C and CCITT V.24 specifications with regard to the RS 232C LCM card. All of the signals designated by the EIA RS 232C and CCITT V.24 specifications are not supported in the QUAD RS 232C LCM. The signals that are provided should be adequate to support the majority of modems manufactured. Some modems do not support all the signals that are provided and other modems may provide a unique signal that the user may wish to monitor, for these reasons a variety of strap options are provided on the QUAD RS 232C LCM board.

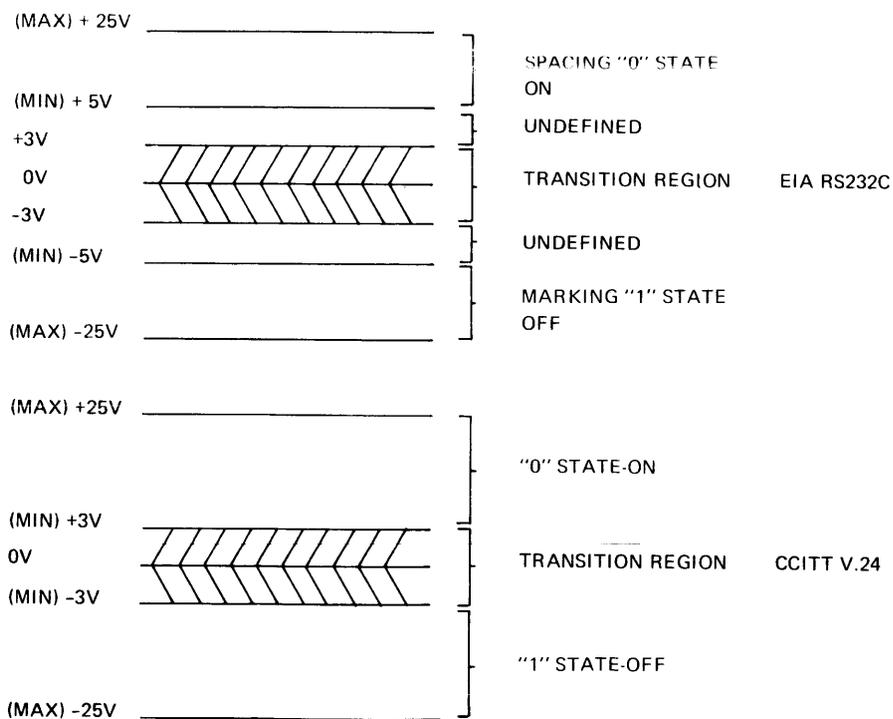

Figure 1. Logic Levels

RS232C/CCITT V.24 Cross Reference of signals terminated in the Quad RS232C LCM

RS232C	CCITT V.24	NAME
AA	101	Protective Ground
AB	102	Signal Ground
BA	103	Transmitted Data
BB	104	Received Data
CA	105	Request To Send
CB	106	Ready For Sending - Clear To Send
CC	107	Data Set Ready
CD	108/2	Data Terminal Ready
CE	125	Calling Indicator (Ring Indicator)
CF	109	Data Channel Received Line Signal Detector
CG	110	Data Signal Quality Detector
CH	111	Data Signalling Rate Selector
DB	114	Transmitter Signal Element Timing
DD	115	Receiver Signal Element Timing
SBA	118	Transmitted Backward Channel Data (Secondary) Transmitted Data
SBB	119	Received Backward Channel Data (Secondary Received Data)

QUAD RS232C LCM CARD OPTIONS

Data Set Ready (CC)

In the event that a modem does not supply CC (Data Set Ready), the Quad RS232C LCM card has a strap option on each of the four lines that will force Data Set Ready to the INTERDATA Communication Adapter to appear ACTIVE. To exercise these options perform the following:

Line "A" Option	Remove strap from Add strap from	46 to 53, 44 to 53
Line "B" Option	Remove strap from Add strap from	37 to 43, 38 to 43
Line "C" Option	Remove strap from Add strap from	16 to 23, 14 to 23
Line "D" Option	Remove strap from Add strap from	7 to 13, 8 to 13

Ring (CE)

In the event that a modem does not supply CE (Ring), the Quad RS232C LCM card has a strap option on each of the four lines that will force the Ring signal going to the INTERDATA Communication Adapter to appear INACTIVE. To exercise these options perform the following:

Line "A" Option	Remove strap from Add strap from	47 to 54, XRPA to 54
Line "B" Option	Remove strap from Add strap from	36 to 42, XRPA to 42
Line "C" Option	Remove strap from Add strap from	17 to 24 XRPB to 24
Line "D" Option	Remove strap from Add strap from	6 to 12 XRPB to 12

Clear To Send (CB)

In the event that a modem or terminal does not supply CB (Clear To Send), the Quad RS232C LCM card has a strap option on each of the four lines that will cause the Clear To Send signal to the INTERDATA Communication Adapter to appear ACTIVE. To exercise these options perform the following:

Line "A" Option	Remove strap from Add strap from	51 to 56, 50 to 56
Line "B" Option	Remove strap from Add strap from	31 to 39, 32 to 39
Line "C" Option	Remove strap from Add strap from	21 to 26, 20 to 26
Line "D" Option	Remove strap from Add strap from	1 to 9, 2 to 9

Carrier Off (CF)

In the event that a modem or terminal does not supply CF (Carrier Off), the Quad RS232C LCM card has a strap option on each of the four lines that will cause the Carrier Off signal to the INTERDATA Communication Adapter to appear ACTIVE. To exercise these options perform the following:

Line "A" Option	Remove strap from Add strap from	48 to 55. 49 to 55
Line "B" Option	Remove strap from Add strap from	35 to 41. 33 to 41
Line "C" Option	Remove strap from Add strap from	18 to 25. 19 to 25
Line "D" Option	Remove strap from Add strap from	5 to 11. 3 to 11

Receive Special

The Receive Special signal provides the ability to receive an optional signal from the modem. One of three optional signals may be strapped into the Receive Special RS232C receiver: 1SBB, 2SBB and CG. The 1SBB signal connects to pin 12 of the 25 pin modem connector. The 2SBB signal connects to pin 16 of the 25 pin modem connector. The CG signal connects to pin 21 of the 25 pin modem connector.

The Receive Special is normally strapped to indicate to the INTERDATA Communication Adapter that it is INACTIVE. In order to receive any of the optional signals the Receive Special line must be restrapped.

Line "A" Option	Remove strap from Add strap from	XRPA to 52, 45 to 52
Line "B" Option	Remove strap from Add strap from	XRPA to 40 34 to 40
Line "C" Option	Remove strap from Add strap from	XRPB to 22 15 to 22
Line "D" Option	Remove strap from Add strap from	XRPB to 10 4 to 10

NOTE

If any of the above options are exercised one of the following options MUST be selected to prevent spurious signal activity from being detected by the Receive Special RS232C receiver.

To receive the signal 1SBB on the Receive Special:

Line "A" Option	Add strap from	AE to AD
Line "B" Option	Add strap from	BE to BD
Line "C" Option	Add strap from	CE to CD
Line "D" Option	Add strap from	DE to DD

To receive the signal 2SBB on the Receive Special line:

Line "A" Option	Add strap from	AF to AD
Line "B" Option	Add strap from	BF to BD
Line "C" Option	Add strap from	CF to CD
Line "D" Option	Add strap from	DF to DD

To receive the signal CG on the Receiver Special line:

Line "A" Option	Add strap from	AG to AD
Line "B" Option	Add strap from	BG to BD
Line "C" Option	Add strap from	CG to CD
Line "D" Option	Add strap from	DG to DD

Transmit Special

The Transmit Special signal provides the ability to send an optional signal from the INTERDATA Communication Adapter to the modem. The Transmit Special is not normally connected to any wire going to the modem. The CH (Data Signaling Rate Selector) signal connects to pin 23 of the 25 pin modem connector. The SBA (Secondary Transmit Data) signal connects to pin 14 of the 25 pin modem connector.

To transmit a signal from the Transmit Special line to the CH option one or all of the following must be added:

Line "A" Option	Add strap from	AB to AA
Line "B" Option	Add strap from	BB to BA
Line "C" Option	Add strap from	CB to CA
Line "D" Option	Add strap from	DB to DA

To transmit a signal from the Transmit Special line to the SBA option one or all of the following must be added:

Line "A" Option	Add strap from	AC to AA
Line "B" Option	Add strap from	BC to BA
Line "C" Option	Add strap from	CC to CA
Line "D" Option	Add strap from	DC to DA

Ground Option

The Signal Ground line (AB) may be isolated from the protective or Chassis Ground (AA) by removing the following straps:

Line "A" Option	Remove strap from	AI to AH
Line "B" Option	Remove strap from	BI to BH
Line "C" Option	Remove strap from	CI to CH
Line "D" Option	Remove strap from	DI to DH

Removing any of the above straps will break the electrical connection of protective ground (AA) between the modem and the RS232C LCM card.
