

**ARTIST WANTED.** Computer graphics.  
No experience necessary.

Designer, the paint program that turns beginners into experts. Use it to give shape and color to *your* ideas. To express yourself. Or for just plain fun. It'll make you look like a pro. (If you've already got a job, Designer can help you with that, too.)

**Full benefits.**

Just look at the Designer menu – it's a studio for the old masters, with none of the mess. Versatile brushes, colorful strokes, rich patterns. A vibrant palette of paints

that you can't spill. An airbrush that never clogs (remember what *that's* like?). Make your own custom tools, create an animated cartoon, type in titles and sign your paintings.

**On-the-job training.**

You call this work? Designer is easier than picking up a paintbrush. Point to what you want with your mouse, press a button, and Voilà! (Need HELP? – point to that.)

You'll know your way around in a few hours. But even in a few months, you won't exhaust the rich power of Designer – though you may be bucking for a promotion.

**With Designer, you're on the job in a fully-equipped artist's studio.**

16-color palette – choose the paint you want with a dab of your – well, your mouse. You can also mix your own hues and shades, using any 16 at a time out of more than 500 (color mixing possible only with a television or composite monitor).

Paint with up to 10 brushes, 28 strokes, 30 patterns – or create your own custom tools, then save them on diskette to use any time.

Not just tools, but many handy aids for using them, too. Draw freehand, or let Designer help you plot points with precision, draw lines and make perfect geometric shapes, including triangles, circles and ovals.

Zoom to 2x or 4x magnification for close-up work on fine details.

A window on your world of art – put a frame around a specific image, then erase it, move or copy it, even stretch it. Or store windowed images on diskette for use in other Designer creations.

Airbrush with one, two or three colors at a time to add texture and shading to your paintings. You control the density and shape of Designer's airbrush spray; turn on the optional "electronic mask" to restrict airbrushing to a specific area.

Become an animator – create and run animation sequences of up to 30 frames. You can vary the overall speed for each sequence as well as the frame delay, or display time, for each frame.

Add titles and other text to your graphic creations, using any of Designer's 6 built-in fonts or type styles. Try your hand at typographical design by creating your own custom fonts.

Anything you create with Designer can be stored on diskette, then loaded again into your computer at any time for display, refinement or printing.

*User's Guide* features a step-by-step introduction to computer graphics with Designer, plus an easy-to-use reference section that provides complete details on every Designer tool and function. Onscreen HELP available for every major feature.

Package includes a Data Diskette containing built-in tools and fonts as well as sample Designer paintings and animation sequences.

*Required equipment:*

- Mindset Personal Computer
- 128K RAM
- 1 Disk Drive
- Mindset MS-DOS
- RGB or composite monitor or television
- Mindset Mouse or Joystick optional

*Designer directly supports the following printers and plotters:*

- Diablo color
- Quadram Quadjet color
- Epson
- NEC 8023A
- Mannesmann Talley Spirit 80 and 160/180L
- Okidata 92
- Gemini 10/10X
- IDS 480
- C. Itoh
