

PC PAINTBRUSH II

PRODUCT DESCRIPTION/OVERVIEW

PC PAINTBRUSH II (Model #M4204) is a diskette-based software product for all MINDSET II ADVANCED PROFESSIONAL VIDEOGRAPHICS based systems (including the M1000II, M1500, and M2000) that provides the user with the ability to create high resolution logos, drawings, symbols, pictures, or custom fonts. PC PAINTBRUSH II also works in conjunction with the VIDEO TITLER II and GLYPH programs such that any image, font, or graphic created with PC PAINTBRUSH II may be integrated with "standard" characters in a titling sequence. This provides any MINDSET II based system with unique character generator capabilities.

PC PAINTBRUSH II offers 640 X 400 resolution so characters, logos, charts, and graphs have a smooth, professional look. The user can select from hundreds of colors and use a wide variety of pens and brushes. Logos, fonts, or graphics may be moved, shrunk, tilted, clipped, or rotated. A zoom feature enables the user to easily edit sections of the image. Graphics may be keyed directly over video and the output videotaped.

APPLICATIONS:

PC PAINTBRUSH II can be used to create custom logos, fonts, symbols, or pictures for titling sequences to enhance any video production. The software may also be used for stand-alone graphics design applications.

FEATURES:

- 10 different brush shapes and widths
- Automatic rectangle, circle, and ellipse commands
- Rubberband, starburst, and variable S-curve lines
- Custom brush
- Move, copy, and duplication commands
