

VIDEO TITLER II

PRODUCT DESCRIPTION/OVERVIEW:

Video Titler II (Model #M4203) is a diskette-based software product for the Mindset II Advanced Professional Videographics System (M1000II) that provides the user with ability to add high quality characters and titles to video productions. The program takes advantage of the highest resolution mode of the Mindset II so characters have a smooth, professional look. Adjustable shadows and 3-D effects, proportional spacing, and kerning, all add to the appearance of the characters. Four colors may be displayed on the screen at any time, and all colors are selectable from a palette of 512 colors. Up to 40 "pages" of titles can be created, edited, and linked in any order. The user selects from a number of pre-programmed transitions such as cuts, fades, crawls, and rolls. Titling sequences that are created can be saved for future use or editing.

APPLICATIONS:

Video Titler II can be used to enhance any video production, including productions for training, education and sales presentations. Specific applications include titles, credits, annotation, subtitles and callouts.

FEATURES:
