

ARCHIVES COLLECTION NO. 6

WHIRLWIND I COMPUTER  
MIT PROJECT 6345

Whirlwind I Computer  
Massachusetts Institute of Technology  
Lincoln Laboratory

Archives Collection No. 6

Donor: R. R. Everett, J. F. Jacobs, Division VI Document Room

Restriction: MITRE Personnel

Contract N5 ori 60, Project 6345  
AF 19(122)-458

Project Whirlwind was sponsored by the Special Devices Center of the Office of Naval Research under Contract N5 ori 60. The original objective of the Project was the development of a device that would simulate airplanes in flight. As the Project progressed, other applications of the computer evolved.

Whirlwind I was of the high-speed electronic digital type, in which quantities were represented as discrete numbers and complex problems were solved by the repeated use of fundamental arithmetic and logical operations. Computations were executed by fractional-microsecond pulses in electronic circuits, of which the principal ones were the flip-flop, the gate coincidence circuit and the magnetic-core memory. Whirlwind I used numbers of 16 binary digits, this length was selected to limit the machine to a practical size.

The Whirlwind I Computer was utilized by such projects as Navy Fire Control, Air Traffic Control, the Cape Cod System, Experimental SAGE Sector, and many others. Whirlwind I spawned two computers, the MTC (memory test computer) and TX-0 (transistor computer), both developed by Group 63.

AC-6 Archives has Index only; collection sent to Smithsonian.  
Museum of History and Technology, Division of Mathematics, Electronic Computers History Collection (File #68).

The Whirlwind I Computer was leased to the Wolf Research and Development Corporation, West Concord, Massachusetts, under Navy Lease Contract Nonr-2956(00) in 1963

Project Dates: 1945 - 1958

AC #6 contains 2,516 items, and is arranged in chronological order. The items in this collection are classified Secret, Confidential and Unclassified

April 1965
