SUBJECT: GROUP 61 SUBROUTINE LIBRARY

To: Group 61

From: W. Lone

Date: October 2, 1952

Abstract: Additional subroutines are given and should be appended to M-1631, dated September 5, 1952. Corrections and clarifications of that memorandum are presented.

The following subroutines are included:

- SRL #9 4 x 7 Decimal Display
- #10 Radius Vector & Azimuth Subroutines
- #11 Unscrambling a Word from Magnetic Tape
- #12 Arcsine in Revolutions
- #13 Sine-Cosine Subroutine

SRL #4 ARCSINE COMPUTATION has been corrected as follows:

106 ad 137  
137 0.200000

It is pointed out that since  $\theta$ , which lies between  $-\frac{\pi}{8}$  and  $+\frac{\pi}{8}$ , has a scale factor of  $2^{-2}$ ,  $\arcsin x$  lies between  $-\frac{\pi}{2}$  and  $+\frac{\pi}{2}$ .

In SRL #3 the constant 0.11404 in register 202 is  $\frac{b}{4}$ .

The following corrected subroutine is included: SRL #4 Arcsine Computation.

Signed: *W. Lone*  
W. Lone

Approved: *C. R. Wieser*  
C. R. Wieser (WRS)

WL/efh

Attached forms:

- SRL #9 4 x 7 Decimal Display
- #10 Radius Vector & Azimuth Subroutines
- #11 Unscrambling a Word from Magnetic Tape
- #12 Arcsine in Revolutions
- #4 Arcsine Computation
- #13 Sine-Cosine Subroutine

Title: SRL #9 4 x 7 DECIMAL DISPLAY

Abstract: Enter with  $|N| \times 10^{-k}$  in AC, where k = number of digits to be displayed. No sign is displayed.

Title: SRL #10 RADIUS VECTOR & AZIMUTH SUBROUTINES

Abstract: Enter with  $\frac{x}{2}$  in 200,  $\frac{y}{2}$  in 201. The output will be  $\frac{R}{4}$  in 2t,  $\phi$  in 1t where  $-\frac{1}{2} \leq \phi \leq \frac{1}{2}$  revs. Should radius vector alone be desired the changes are 100 to 120; 120 sp 0 with orders beyond 120 not needed.

Formula: 
$$R = \sqrt{x^2 + y^2} = a(|x| + |y| - b \frac{|x||y|}{|x| + |y|})$$

$$\phi = \frac{\text{sgn } x}{4} \left[ d - c \frac{y - (\text{sgn } y) \frac{b}{2} \frac{|x||y|}{|x| + |y|}}{R} \right]$$

Precision: in R, 0.75%; in  $\phi$ , max. error 1.23 degree.

Title: SRL #11 UNSCRAMBLING A WORD FROM MAGNETIC TAPE

Abstract: The word to be unscrambled is in AC, and at the conclusion the unscrambled word is in AC. BR must be clear when entering this subroutine. This subroutine takes about 2.1 milliseconds. The maximum permissible time is 2.5 milliseconds.

Title: SRL #12 ARCSINE IN REVOLUTIONS

Abstract: Enter with  $x$  in AC ( $-1 < x < 1$ ). The output of  $\phi = \arcsin x$  in revolutions is in AC where ( $-1/4 < \phi < 1/4$ ). The maximum error is about .001 rev  $\approx$  .5 degree.

Title: SRL #4 ARCSINE COMPUTATION

Abstract: Enter with  $x$  in AC,  $0 \leq x < 1$ . The output is  $\theta = 2^{-2} (\sin^{-1} x)$  radians in AC ( $-\frac{\pi}{8} \leq \theta \leq \frac{\pi}{8}$ ). It follows then that  $-\frac{\pi}{2} \leq \sin^{-1} x \leq +\frac{\pi}{2}$ . This must be used in conjunction with "Square Root Sub-program," SRL #7.

Precision: Maximum error about .001 radian.

Title: SRL #13 SINE-COSINE SUBROUTINE

Abstract: This variation of SRL #1 enables one to enter the subroutine with  $\theta$  such that  $-1/2 \leq \theta \leq +1/2$  or  $0 \leq \theta < +1$  measured from East.  $\theta$  should be in AC when entering the routine. Output will be  $\sin \theta$  in 200,  $\cos \theta$  in 201.
