

TITLE: Hierarchial Analysis of Variance

AUTHOR: Richard A. Lamm

ABSTRACT:

This routine performs a complete analysis of variance for data from a repeated subsampling design with an arbitrary number of stratifications and arbitrary number of observations within the stratifications. The amount of data analysed is restricted only by the available drum memory.

DISCLAIMER:

"The authors of this program material, the POOL organization and Royal McBee believe this program to be correct; however, they bear no responsibility, financial or otherwise, for errors resulting from its use. This program is distributed only to individual and installation members of POOL. Further distribution of this manual and accompanying tapes for use by non-members is prohibited."

FOR POOL MEMBERS ONLY

1. Title: Hierarchical Analysis of Variance  
 Author: Richard A. Lamm  
 Date: December 7, 1959  
 Installation: Lederle Laboratories, Pearl River, New York  
 Classification: F-4
  
2. Purpose:  
 To perform a complete analysis of variance for data from a repeated subsampling (nested subsampling) design with an arbitrary number of stratifications and arbitrary numbers of observations within the stratifications. Transformation of the data to  $1000 \log x$  is controlled by the Transfer Control button.
  
3. Restrictions:
  - a. All observation data must be entered (coded) at a q of 30. Generally, data should be coded so that they are 4 decimal digits in length.
  - b. No (coded) Sum of Squares for a level may exceed  $2^{30} - 1$ .
  - c. No (coded) mean may exceed  $2^{19} - 1$ .
  - d. The amount of data is restricted only by the available drum memory.
  - e. The number of lines in the Analysis of Variance is limited to 11. If more lines are required, it is necessary to change Lo+0642 from XC6300 to XcTtss in order to provide 3L consecutive sectors for storage of the analysis, where L is the number of lines.
  - f. There must be at least two observations within each cell of the lowest hierarchical level, since the  $\Sigma x$  and  $\Sigma n_{ijk} \dots$  are stored sequentially in pairs in the location of the data. This restriction is not necessary if there is a sufficient number of observations in the beginning cells to prevent the storage of partial sums on unused data. However, a 'divide check' will occur at Lo / 22 of F4-164 if n is 1. Press start compute to continue. The result will be correct.
  - g. Memory Allocation. (Routines in parenthesis are not used with this program)
    - 0000-0263 (Program Input, 10.4)
    - 0300-0563 Data Input No. 3, 11.2
    - 0600-0963 (Decimal Memory Printout)
    - 1000-1058 Integer Printout
    - 1100-1231 (Data Output No. 1, 12.0)
    - 1232-1263 Modifications to Data Input No. 3
    - 1300-1531 Data Output No. 2, 12.1
    - 1532-1563 Storage of Data Input No. 3 Modification Results
    - 1600-1663 (Square Root, 15.1)
    - 1700-1863  $\log_k x$ , 18.0
    - 1900-1963 Alphanumeric, 19.0
    - 2000-2063 (Modifiable Hexadecimal Input)
    - 2100-2163 (Antilog Printout)
    - 2200-2263 Zero Suppression for 12.0 and 12.1
    - 2300-2363 (Exponential, 17.0)
    - 2400-2463 (Antilog)
    - 2500-2663 Data Output "30"
    - 2700-5963 Available for Program and Data Storage
    - 6000-6263 Double Precision Sum of Squares or Products
    - 6300-6332 Analysis of Variance Results
    - 6333-6363 Intermediate Results-See Attached Code Sheet for Track 63

- h. If it is desirable to obtain the mean square for each of the individual level 1 cells (Level 0 Mean Square), the following changes are required;

<u>Location</u>	<u>Present</u>	<u>Change To</u>
0047	Y0124	Y0507
0124	A[ ]	U0460
0152	B0120	U0509

(All addresses are understood to be Lo+)

4. Method:

The method used is the same as may be found in many books on statistical methods, e.g., R. L. Anderson and T. A. Bancroft. Statistical Theory in Research. McGraw-Hill Book Company, Inc., New York (1952). See paragraphs 22.3 and 22.4. The sums of squares are obtained as follows:

$$\text{Level 0 } \sum_s \dots \sum_j \sum_t \left[ \sum_i \frac{n_{ijk\dots s}^2}{n_{ijk\dots s}} - \frac{(\sum_i X)^2}{n_{ijk\dots s}} \right]$$

$$\text{Level 1 } \sum_s \dots \sum_j \sum_t \frac{(\sum_i X)^2}{n_{ijk\dots s}} - \sum_s \dots \sum_j \frac{(\sum_t \sum_i X)^2}{\sum_t n_{ijk\dots s}}$$

etc.

5. Coding Information:

- a. Storage. The program requires 7 tracks of storage for instructions and constants. In addition, it uses 6300 to 6300+3L-1, where L is the number of lines in the Analysis of Variance and 6333, (6342), 6344, (6346), 6347, 6349, 6350, (6355), 6356-60, 6362 and 6363. The addresses in parenthesis are used only with the alternate output.

- b. This program uses:

Subroutine	Location
Data Input No. 3 with Lederle Modifications	0300
Integer Printout	1000
Data Output No. 2	1300
Log <sub>k</sub> x (If transformation is desired)	1700
Alphanumeric	1900
Data Output "30"	2500
Double Precision Sum of Squares or Products	6000

There is no calling sequence required for this program. Halt and transfer to Lo for computations.

- c. Input.

A data tape should contain;

1. Experiment designation or heading followed by a conditional stop.
2. The coding of the data, e.g. 1000 x, followed by a conditional stop. There should be no carriage return preceding this information.

3. Data as follows:

a. 0+29(Lo<sub>d</sub>)'n<sub>1111...</sub>'...'n<sub>ijk...</sub>'-0000000'

where n<sub>ijk...</sub> is the number of observations in the i<sup>th</sup> cell of the first level, in the j<sup>th</sup> cell of the second level, in the k<sup>th</sup> cell of the third level, etc.

0+296363'n<sub>.11...</sub>'...'n<sub>.jk...</sub>'-0000000'

where n<sub>.jk...</sub> is the number of first level cells in the j<sup>th</sup> second level cell, in the k<sup>th</sup> third level cell, etc. etc. to

0+296363'n<sub>...s</sub>'-0000000'

0+296363'1'-0000000'

0+306363'data'-0000000'

As a check:  $\sum n_{ijk...}$  = Number of observations  
 $\sum n_{.jk...}$  = Number of n<sub>ijk...</sub>'s  
 $\sum n_{.k...}$  = Number of n<sub>.jk...</sub>'s

b. Example of Input:

The data from table 10.14.1 of G. Snedecor. Statistical Methods. Iowa State College Press, 5th Ed. 1957. gives Calcium concentrations in leaves of turnip plants in units of %. The data are:

Plant	1			2			3			4			
	1	2	3	1	2	3	1	2	3	1	2	3	
Deter.	1	3.28	3.52	2.88	2.46	1.87	2.19	2.77	3.74	2.55	3.78	4.07	3.31
	2	3.09	3.48	2.80	2.44	1.92	2.19	2.66	3.44	2.55	3.87	4.12	3.31

The data tape would contain:

Calcium Concentration in Leaves of Turnip Plants (%)' 1000 times %' CR  
 0+295000'2'2'2'2'2'2'2'2'2'2'2'2'-0000000' CR  
 0+296363'3'3'3'3'-0000000' CR  
 0+296363'4'-0000000' CR  
 0+296363'1'-0000000' CR  
 0+306363'3280'3090'3520'3480'...4070'4120'3310'3310'-0000000''

Since there are two determinations for each of the twelve leaves the first line contains twelve 2's. Next, there are three leaves in each of the four plants, hence four 3's are entered. There are four plants in the experiment, hence the 4 is entered next. The input of the numbers within levels must always terminate with 0+296363'1'-0000000'. The data are loaded sequentially beginning with the determinations within the first leaf of the first plant proceeding on to the determinations within the second leaf of the first plant, etc.

d. Output:

1. The standard output (not using the changes of 3.h) for this example contains:

- a. Means: Level 0. These are the mean determinations for each leaf. It should be noted that there are 4 groups of 3 means each. Each mean within a group is the mean for a leaf, and each group corresponds to a plant.
- b. Means: Level 1. These four means are for the three leaves within the four plants and therefore they are the plant mean determinations.
- c. Means: Level 2. This mean is for the four plants in the

experiment (the grand mean).

d. Analysis of Variance

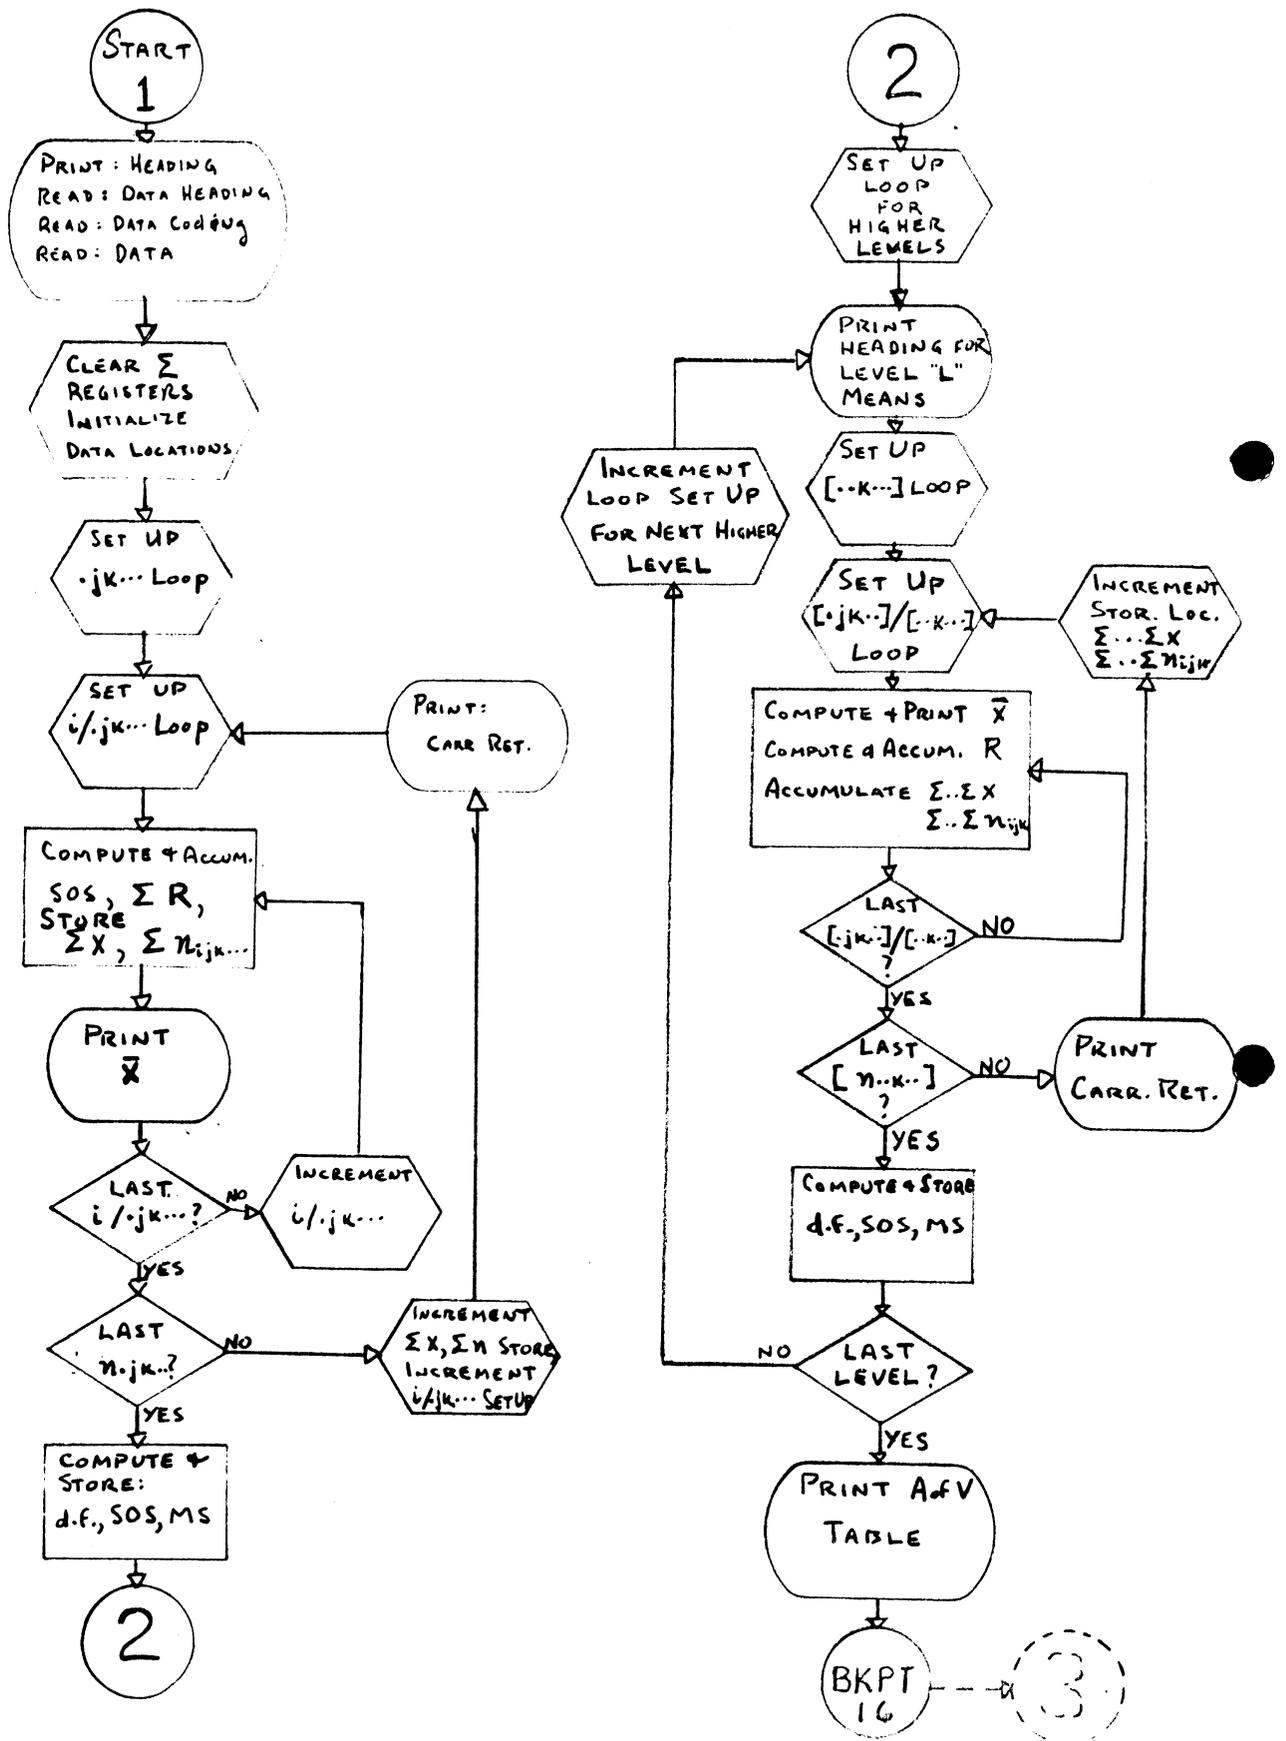

The Level 0 Mean Square is for Determinations within Leaves.

The Level 1 Mean Square is for Leaves within Plants.

The Level 2 Mean Square is for Among Plants.

2. The alternate output gives the mean square (variance) of determinations within each leaf printed after the leaf mean (Means: Level 0) in the alternate color.
