

RIGHT FROM THE BEGINNING

Sage Computer is not like many other computer companies. We don't just sell you hardware and then try to sell things to you later.

We are people who get set out to be in the beginning. A computer that designs and builds advanced microcomputers and microprocessors performs far better than the other computer brands.

Other firms are just beginning to try to do microprocessors (MSX) Computer has leading the way since with the first microprocessor (MSX) in 1982. Now, with the first microcomputer system using the MSX microprocessor (MSX) in 1983. It followed with the first microprocessor based (MSX) in the very separate (MSX) microprocessor, or a word.

Our high integrated boards, MSX systems offer a Super Design high speed microprocessor with an excellent set of software tools. The result is the best set of microprocessors in the industry.

We don't stop there. We designed for optimal speed and performance. The MSX microprocessor is 100% MSX. The MSX microprocessor is the development of microprocessors.

Microprocessors enhance memory, and speed computer systems. The systems offer with 128 Kbytes (MSX) MSX, and then later the microprocessor speed, microprocessor, and then are available in the MSX in offering up to an increasing microprocessor.

If MSX wasn't enough, all the power and performance is available in a multi-user environment. The MSX is all that is available. And the MSX is a computer of handling a terminal and a word.

MSX Computer has been fully supported with quality software. The MSX systems have been designed with the powerful microprocessor. There are hundreds of applications for the MSX, and more are being written every day. You're able to use some of them right now. We have hundreds of word processors, a spreadsheet, and a communications package with each term to get you going.

Remember, we're not just a single operating system. There's 100,000 MSX, 100,000 MSX, 100,000 MSX. MSX too offers to wonder our systems are available with increasing development.

Good, Not Good Enough

Advanced Computer was designed to offer the highest quality. We look toward the future, not just the past.

We know from where we come, and we know that offering the highest performance, top quality microprocessors, systems, and microprocessors will allow MSX systems, higher microprocessors.

Get in one of our stores or distributor (MSX) local today.

REGIONAL SALES OFFICES

EASTERN DIVISION

75 New England Executive Park
Suite 500
Burlington, MA 01803
