# SDT-9000 DDS-3 Tape Drive

Congratulation on your purchase of the Sony DDS-3 drive SDT-9000.

This drive is a high capacity data storage device using 4mm DAT (Digital Audio Tape) technology. The SDT-9000 drive achieves high data reliability through Read-After-Write, an additional level of Error Correction Code, and other features.

The Sony SDT-9000 drive stores data on tape using a standard format called DDS (Digital Data Storage), DDS-3, DDS-2, DDS-DC and DCLZ formats. These formats are used by many other DDS tape drive manufacturers, providing a broad range of compatible tape drives.

The Sony SDT-9000 is fully READ and WRITE compatible with the DDS-3, DDS-2, DDS and DDS-DC format tapes.

# Introduction

## Product Features

	<b>SDT-9000 (With Data Compression)</b>
Data Capacity	24 GB (typical)*
Transfer Rate (sustained)	2.4 MB/sec (typical)*

- Supported Formats: DDS-3, DDS-2, DDS, DDS-DC and DCLZ
- High Burst Transfer Rate- 5MB/sec Asynchronous  
10MB/sec Synchronous
- Large 2MB Buffer
- 3.5" Standard Height, 5.25" Half Height
- Embedded SCSI Interface
- Supports Variable or Fixed Record Length
- Supports SCSI-2 Sequential-access Devices Command Set
- Read After Write (RAW)
- Frame Rewrite Function
- Three Levels of Error Correction Code (ECC)
- Quick Search (200 times normal Read/Write speed)
- Random Read
- N-Group Write Option
- Dual Partition Option
- SCSI Disconnection/Arbitration

\* Assuming 2:1 compression. Actual capacity and transfer rate may vary since compression is depending upon data type.

## Precautions

### Installation

Avoid placing the drive in a location subject to:

- high humidity
- high temperature
- mechanical shock and vibration
- direct sunlight

### Operation

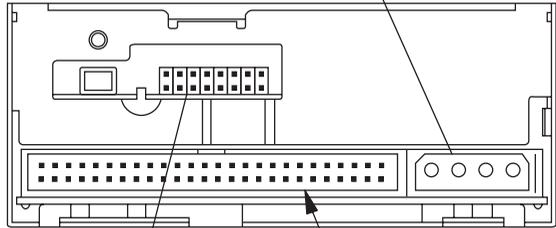

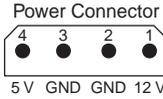

- \* Do not move the drive while it is operating. Doing so may cause a malfunction.
- \* Avoid exposing the drive to sudden changes from low to high in temperature. This may cause water condensation to collect inside the drive. If the ambient temperature should suddenly rise while the drive is turned on, wait at least one hour before turning on the drive. If you attempt to operate the drive immediately after a sudden increase in temperature, a malfunction may occur.
- \* Do not turn off the drive while a tape is inside the drive.

### Transportation

- \* Keep the original packing materials for possible future shipments of the drive.
- \* Be sure to remove any tapes from drive prior to transportation. After removing the drive from the computer, repack the drive into its original packaging.

# Installation

## SCSI Connection/Setting the SCSI ID/Option Switches

SCSI ID

# Mounting Holes

For 3.5" Standard Height (SDT-9000)

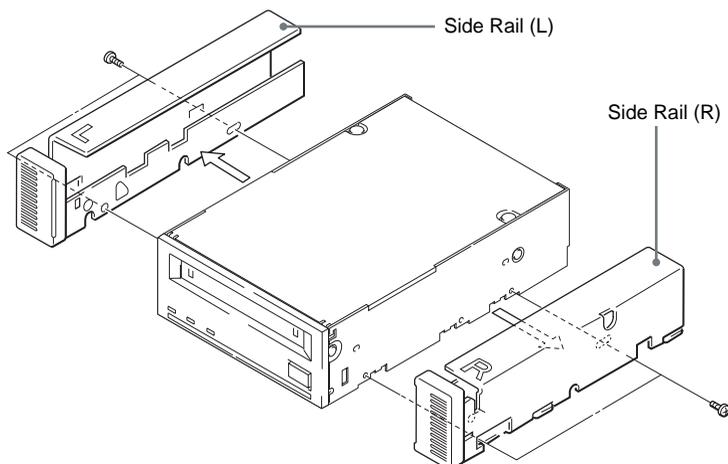

**For 5.25" Half Height (SDT-9000/R)**

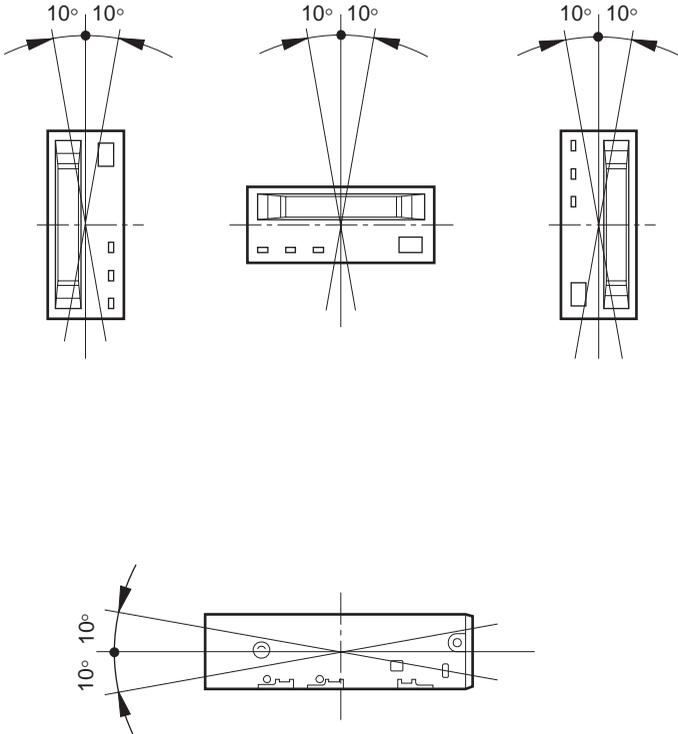

## Remodeling from 5.25" Model to 3.5" Model

You can remodel the SDT-9000/R (5.25" model) to the SDT-9000 (3.5" model) yourself.

- 1** Remove the 2 screws for each side rail.
- 2** Take the side rail off.

# Orientation

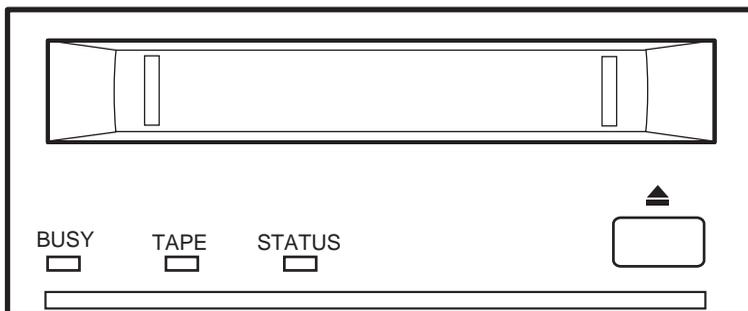

---

# Operation

## Location of 3 LEDs

There are three LED indicators (BUSY, TAPE and STATUS) and an EJECT button on the front panel of the unit.

### Front Panel (for 3.5" Standard Height)

## LED Indication for Drive Status

LED			State		
BUSY	TAPE	STATUS	Activity	Cartridge	Other
			None	None	None
			SCSI	None	None
			Drive	Loading/Unloading	None
			Drive	Loading/Unloading	Write Protected
			None	Loaded	None
			SCSI	Loaded	None
			SCSI/Drive	Loaded	None
*			*	Loaded	Write Protected
			None	Loaded	Cleaning Tape at EOM
*		*	*	Loaded	Error Rate Warning
*	*		*	*	Cleaning Request
*	*		*	*	Selftest Failure
	*	*	*	*	Waiting for Reset
*		*	*	*	Waiting for Eject

\* : Not defined.

1 pulse (0.25 sec on)

2 pulse (0.25 sec on),  
0.5 sec off

off

on

0.25 sec on / 0.25 sec off

## Drive Operation

### Loading a Cassette

Insert a cassette into the slot on the front panel with the arrow on the cassette pointing towards the drive. When the cassette is inserted, the drive takes it and automatically loads it into drive mechanism.

### Unloading a Cassette

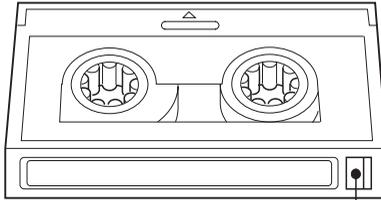

The cassette can be removed from the SDT-9000 either in response to a SCSI Unload Command, or by pressing the eject button.

By pressing Eject button, the tape goes to BOM, the drive unthreads it, and ejects the cassette from the slot.

### Write-protecting a Cassette

Cassettes can be write-protected by sliding the tab on the back of the cassette open.

In this state, data can be read from the tape but not written onto it.

Using your fingernail, push the switch in the direction of the arrow to avoid accidental overwriting or erasure of data.

Return the switch to its original position to re-enable writing.

## Using a Cleaning Tape

The SDT-9000 has a built-in super head cleaner designed to last for the life of the drive.

In addition, a cleaning tape should be used periodically to clean the entire tape path.

The drive will automatically request you to perform a cleaning operation.

The need for a cleaning tape is determined by the drum rotating hours since the last cleaning was performed. The drive will request a cleaning operation every 24 hours of drum rotation.

## Emergency Cassette Removal Procedure

In case the tape is stuck inside the drive, you could remove the tape cartridge manually.

- 1** Remove the drive from the chassis or enclosure to allow access to the bottom and left side of the drive.
- 2** Remove the drive's top cover to monitor the degree of tape slack throughout the process.

### Note

Never touch the inside of the drive when the top cover is opened. Otherwise it may cause a trouble.

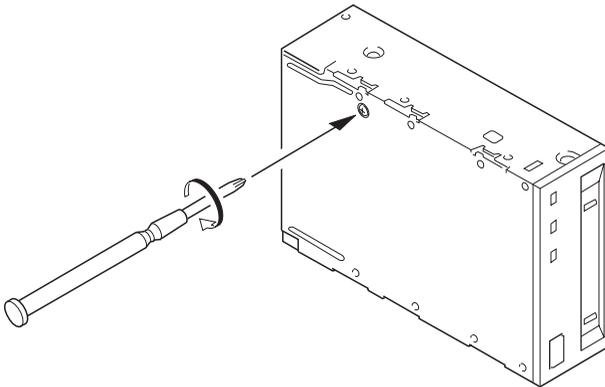

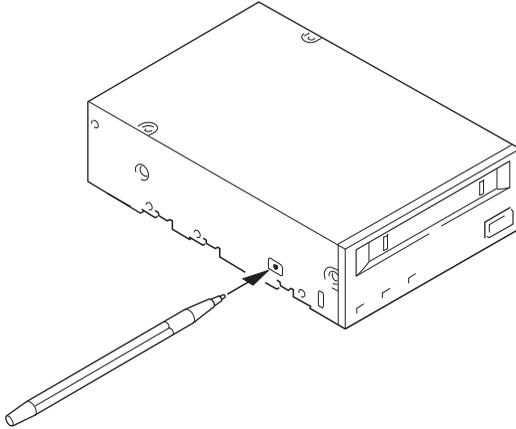

- 3** Rotate the Loading/Threading motor clockwise with a small screwdriver (ex. Phillips "+" No. 1) put into the plastic screw head on the back of the drive (see the location in a drawing below).

This will enable you to move back the threading mechanism to the initial position.

### Notes

- Do not rotate the screw further when you reach to the mechanical limit to avoid damage on the mechanism.
- To prevent damage on the tape, take up the slack of tape from time to time by clicking the ratchet mechanism located on the left side of the drive.

- 4** Continue the procedure until the tape is lifted out of the drive mechanism and ejected.
- 5** Return the drive to a service station for repair.

---

# Interface Implementation

## Supported SCSI Messages

Abort	Identify (w/&w/o Disconnect)
Bus Device Reset	Initiator Detected Error
Command Complete	Message Parity Error
Disconnect	Message Reject
Extended Message	No Operation
- Synchronous Data Transfer Request	Restore Pointers
	Save Data Pointer

## Supported SCSI Commands

Erase	Receive Diagnostic Results
Inquiry	Release Unit
Load/Unload	Request Block Address
Locate	Request Sense
Log Select	Reserve Unit
Log Sense	Rewind
Mode Select (6)	Seek Block
Mode Sense (6)	Send Diagnostic
Prevent Allow Medium Removal	Space
Read	Test Unit Ready
Read Block Limits	Verify
Read Buffer	Write
Read Position	Write Buffer
	Write Filemarks

# Specification

## Product Specifications

### Dimensions

	3.5" Standard Height	5.25" Half Height
Height	41.2 mm (1.62 in)	41.2 mm (1.62 in)
Width	101.6 mm (4.0 in)	146.0 mm (5.75 in)
Depth	146.0 mm (5.75 in)	146.0 mm (5.75 in)

### Altitude

Operating	0 to 7000 feet
-----------	----------------

### Vibration

Operating	Swept Sine 5 to 500 Hz *0.25 G Peak 1 Octave/min. 3 axes, 3 directions
Non-Operating	Swept Sine 5 to 500 Hz *0.5 G Peak 1 Octave/min. 3 axes, 3 directions

### Acoustic Noise

(A) curve weight

Streaming Write/Read	35 db (A)
Insert/Eject	60 db (A)

#### Note

The sound-meter on (A) scale is located 1m in front of the center of the drive front panel.

### Shock

Operating	No Data Loss Half Sine Performance 5 G Peak 3 ms 3 axes, 3 directions *Interval 10 seconds
Non-Operating	No Device Damage Half Sine 90 G Peak 3 ms (30 G Peak 11 ms) 3 axes, 3 directions

## Temperature and Humidity Range

### Temperature

Operating	5 °C to 40 °C ( $\Delta T < 10$ °C/h)
Non-Operating (mech)	- 40 °C to 70 °C ( $\Delta T < 20$ °C/h)
Non-Operating (tape)	- 40 °C to 45 °C ( $\Delta T < 20$ °C/h)

### Humidity

Operating	20 to 80% RH, non-condensing Maximum wet bulb temperature = 26 °C
Non-Operating (mech)	5 to 95% RH ( $\Delta RH < 30\%/h$ )
Non-Operating (tape)	20 to 80% RH ( $\Delta RH < 30\%/h$ )

## Power Requirements

Voltage	Max Ripple	Current*	
		Typical	Maximum
5 V +/- 5 %	100 mVp-p	1.0 A	2.0 A
12 V +/- 10 %	100 mVp-p	0.21 A	0.7 A

\* During Load/Unload

## Suspended Particulate

Operating	Less than 150 microgram/m <sup>3</sup>
-----------	--

## ESD

Discharge	< 15 kV: No operation failure
Voltage	< 20 kV: No drive damage

## Air-cooling Requirement

Surrounding temperature	< 40 °C
-------------------------	---------

Clean air flow is recommended to minimize the possibility of data loss.
