# Getting Started

This guide explains how to prepare for unpacking, installing, and verifying your U 5000/20, U 5000/30, U 5000/35, U 5000/40, U 5000/50, or U 5000/55 system. Specifically, it outlines the sequence of procedures you should follow to set up your system, and lists the documents you need to consult in the process.

## Plan Your Site

Installation of your system requires that you consider and plan for the electrical, environmental, and space requirements of the main unit and any peripheral equipment you intend to use. The information you need for this step is in the *U 5000/20, U 5000/30, U 5000/35, U 5000/40, U 5000/50, and U 5000/55 Systems; U 5000 Series Operating System; Planning Guide*. This document is shipped with your equipment.

## Verify Arrival of All Components

As soon as your equipment arrives, inspect each shipping container for physical damage. If any containers are damaged, note it on the bill of lading from the carrier and notify your Unisys representative.

Ensure that the number of containers you receive agrees with the total shown on the bill of lading. A shipping label is attached to each container indicating the style number and quantity. Verify this against your bill of lading. Figure 1 is an example of a typical shipping label.

## Plan Your Setup Procedure

It is recommended that you proceed in the following order: unpack, inventory and verify the contents of each container. Use this order as you go through the sequence in the list following this paragraph. Refer to the following sections for unpacking, inventory, and installation information.

- Locate the box in the delivery that is stamped "Open Me First." It contains the "Open Me First" envelope. The document package in this envelope is designed to aid customer setup. Do not forget to inventory this box using the list provided at the end of the section called "Inventory Shipping Container Contents."
- Designate a console terminal. You may choose any one of your Unisys terminals to serve this function. This terminal is used to install the operating system and is connected to the console port on the main unit.
- Unpack, inventory, and place the console terminal in position, preferably next to your system cabinet.
- Unpack, inventory, and roll the main unit into position.
- If you ordered an expansion cabinet, unpack, inventory, and roll it into position. Contact a customer engineer to install your expansion cabinet. Do not install it yourself.
- Unpack, inventory, and place in position any remaining peripherals you may have ordered.
- Perform peripheral installation procedures by following the installation guide or chapter provided with each piece of equipment.

## Unpack Your Equipment

Any unpacking information you need is supplied with your hardware. The U 5000/20, U 5000/30, U 5000/35, U

## Getting Started

---

5000/40, U 5000/50, or U 5000/55 system, the expansion cabinets, and the Standalone 1/2-Inch Tape Drive Cabinet have an unpacking guide (located in your "Open Me First" envelope). Unpacking instructions for peripheral equipment you may have ordered are located on the shipping container or in the unpacking, installation, or user guides provided with that equipment.

### Inventory Shipping Container Contents

Inventory the items in each container as you unpack and use the lists following this section to verify container contents. A shipping container normally holds a primary piece of equipment, optional features directly associated with the primary piece, and related components. In some cases due to size or weight considerations, components are packaged separately.

If you find a damaged unit during the unpacking procedures, contact your Unisys representative for an assessment of the damage and instructions. Do not attempt to install damaged units.

In the main system delivery there is a box containing an "Open Me First" envelope which includes several documents. Inventory the contents of this box using the following lists. Request any missing documents from your Unisys representative.

## Install and Verify Your Equipment

Refer to the installation guides packed with your equipment for installation procedures. Additional cabling information may be found in the *U 5000/20, U 5000/30, U 5000/35, U 5000/40, U 5000/50, and U 5000/55 Systems; U 5000 Series Operating System; Planning Guide, UP-11768 Rev. 3, Update A.*

## Locating and Correcting Problems in the System

If the expected conditions do not occur following installation and verification of your U 5000 system, refer to the documents marked with an asterisk in the list in the section called "Inventory Shipping Container Contents."

These documents explain which errors you can correct yourself and which require the assistance of your Unisys service representative.
