RPG II INDICATORS

Indicator Definition

Indicator		Permissible Entries
Type	Where Defined	
Record identification indicator	Input format specifications form columns 19-20	01-99, L1-L9, LR, and H1-H9
Field indicator	Input format specifications form columns 65-70	01-99, and H1-H9
Control level indicator	Input format specifications form columns 59-60	L1-L9
Resulting indicator	Calculation specifications form columns 54-59	01-99, L1-L9, LR, H0, H1-H9, OA-OG, U1-U8, KA-KN, KP-KW, and OV
Overflow indicator	File description specifications form columns 33-34	OA-OG, and OV
Internal indicators	Internally by RPG II	1P, L0, LR, MR, and H0
External indicator	Internally by RPG II	U1-U8
Function key indicator	Calculation specifications form columns 9-17 and output format specifications form columns 23-31	KA-KN and KP-KW

Indicator Use

Indicators		Permissible Entries
How Used	Where Specified	
File conditioning	File description specifications form columns 71-72	U1-U8
Field record relation	Input format specifications form columns 63-64	01-99, L1-L9, MR, H1-H9, and U1-U8
Control level	Calculation specifications form columns 7-8	L0, L1-L9, and LR
Calculation conditioning	Calculation specifications form columns 9-17	01-99, L0-L9, LR, MR, H0, H1-H9, OA-OG, OV, KA-KN, KP-KW, and U1-U8
Output conditioning	Output format specifications form columns 23-31	01-99, 1P, L0-L9, LR, MR, H0, H1-H9, OA-OG, KA-KN, KP-KW, OV, and U1-U8

Setting Indicators On/Off

Indicator Type	When Set On	When Set Off
Record identification indicator	When the specified record is read and prior to the execution of total calculations.	After the current processing cycle is completed and before the next record is read during the next cycle.
Field indicator	When the condition the indicator represents is present in the specified field.	Prior to the next time the field is to be tested for the condition.
Control level indicator	When the value in the specified control field changes. (All lower level indicators are also set on.)	When the following detail cycle is completed.
Resulting indicator	When the calculation is performed and the condition that the indicator represents is present.	The next time the calculation is performed and the condition that the indicator represents is not present.
Overflow indicator	When a line is printed on the form on or past the forms overflow channel or if the form is spaced past that point.	After the following heading and detail lines are printed.
U1-U8 external indicators	By a // Δ SET Δ UPSI job control statement prior to the execution of your program or by a SETON operation within your program or when used as a resulting indicator in calculations.	By a SETOF operation within your program.
1P (first page) internal indicator	At the beginning of program execution.	Before the first input record is read
H0-H9 internal indicators	By an error condition (H0) or by a SETON operation within your program.	By a SETOF operation within your program.
L0 internal indicator	Always on.	Never
LR (last record) internal indicator	After the last record in the last file is processed or by a SETON operation in your program.	Never
MR (matching record) internal indicator	When all matching fields in a record of a secondary file match all the matching fields in the primary file.	When all total calculations, output, and overflow for the records have been executed.
KA-KN KP-KW function key indicator	When function key is pressed.	Before a read to a workstation file is issued or by a SETOF operation.

***ERROR Field Format**

BYTE	0	1-3	4-7	8-11
CONTENTS	ERROR CODE	STATUS BYTES	ADDRESS POINTER 1	ADDRESS POINTER 2

Summary of Error Messages, *ERROR Field Contents, and Operator Control Options

Program Action	Error Message That Indicates Condition That Set HO Indicator On	Contents of *ERROR Fields				Operator Control Options	
		Error Code		Address Pointer 1 ②	Address Pointer 2 ②

T	RPG041 CONSOLE I/O ERROR	3	F3	-	IORB	2, 3	
T	RPG045 WORKSTATION ERROR	4	F4	-	-	2, 3	

NOTES:

(2) (Cont.)

(1) Program Action

C = program terminates after detail output; HO indicator can be set off unless it was set on during heading or detail output.

T = program terminates immediately.

(2) Address Pointers

FILE DES = address of file descriptor area.

FIELD = address of field associated with the error condition.

KEY = address of key field associated with the error condition.

RECORD = address of the record associated with the error condition.

RCB = address of remote control block.

TLF = address of the table linkage field plus 16.

IORB = address of input/output request block.

(3) Operator Control Options

0 = continue

1 = bypass

2 = controlled termination

3 = program terminates immediately
