

Processor and Bus Support for Agilent Technologies Logic Analyzers

Configuration Guide
Tools to Accelerate Your Debugging Process
May 1, 2001

Configuring a logic analysis system for your specific application is as easy as one, two, three. To configure a system you must select products that will 1. Probe, 2. Acquire, and 3. Analyze the data from your system. The following figure gives a quick overview of typical system considerations.

Use the information in each of the sections listed to help you configure a system that will meet your specific measurement needs.

1. Probing

The physical and electrical connection to target signals

2. Acquisition

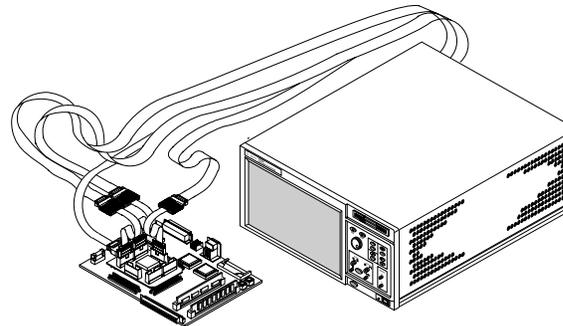

Data capture, stimulus and processor control

3. Analysis

View and analyze data in a form you easily understand to help debug problems faster

Accurate measurements start with reliable probing. Agilent Technologies offers a wide variety of probing accessories to support your measurement needs making it easy to connect your Agilent logic analyzer to your designs.

Probing Adapters

- General Purpose Lead Set
- High-density termination adapters
- Processor specific analysis probes

Frames with built-in acquisition or measurement modules

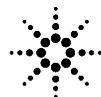

- State/Timing Analyzers
- Oscilloscopes
- Pattern Generators

Analysis Tools

- Post-processing Tool sets
- Debuggers

Agilent Technologies

How To Determine Your Probing Needs

To determine what probing method is best to use you need to evaluate your needs and take the following into consideration:

- Number of signals to be probed
- Ability to design probing connectors into the target
- Probing clearance requirements
- Available probing devices
- Signal loading
- Ease of installation
- Package type
 - DIP Dual Inline Package
 - PGA Pin Grid Array
 - BGA Ball Grid Array
 - PLCC Plastic Leaded Chip Carrier
 - PQFP Plastic Quad Flat Pack
 - TQFP Thin Quad Flat Pack
- Package Pin Pitch (distance between centers of adjoining pins)
- Pin count

Probing Options:

General Purpose: Use as a convenient way to access individual signals anywhere on the target.

Custom Probing - Designed into the Target: Consider placing probing connectors directly on the target during board layout. Design for testability. (See pg 3)

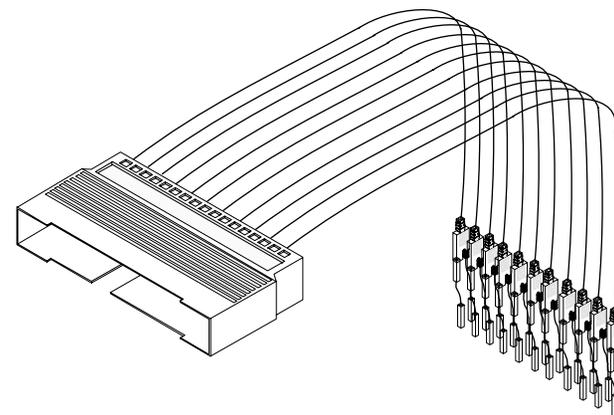

IC Package Adapters: Simple means of connecting to all the pins of a PQFP or TQFP package. (See pg 4)

Device Specific: Probe devices specifically designed for processors, DSPs, busses, and programmable logic devices. (See pg 5)

Probing – General Purpose

General Purpose Lead Set: 01650-61608

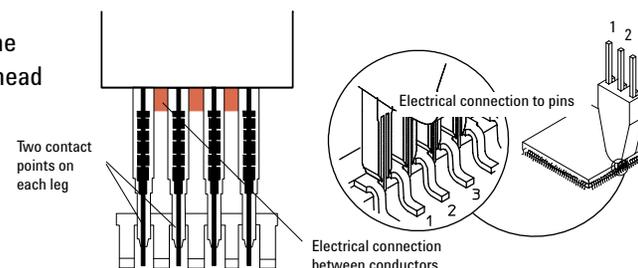

Agilent Product Number	Description
01650-61608	General Purpose Lead Set

The Agilent Technologies Wedge Probe Adapter

The Agilent wedge probe adapter provides mechanically sound, noninvasive connection to adjacent pins on TQFP and PQFP packages.

Connect logic analyzer flying leads directly to the adapter; connect scope probes through a dual-head adapter.

Number of Signals	Pin Pitch	Agilent Product #	Number of Agilent Wedges Included
3	0.5 mm	E2613A	1
3	0.5 mm	E2613B	2
8	0.5 mm	E2614A	1
16	0.5 mm	E2643A	1
3	0.65 mm	E2615A	1
3	0.65 mm	E2615B	2
8	0.65 mm	E2616A	1
16	0.65 mm	E2644A	1

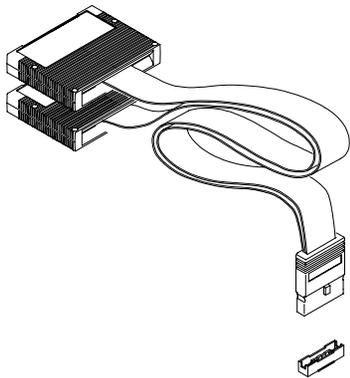

Probing – Custom Probing (Designed into the Target System)

Designing a Probing Solution for Unique Applications

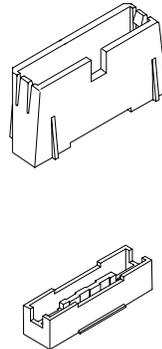

You can design test connections into your circuit using test headers with termination adapters. Details of how to do this are shown in *Probing Solutions for Agilent Technologies Logic Analysis Systems*, publication number 5968-4632E.

Agilent E5346A High-Density Termination Adapter and E5339A Low Voltage Termination Adapter

32 data channels
2 clock channels

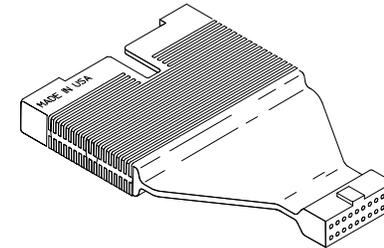

Mictor Connectors for High-Density Termination Adapters

Standard Termination Adapter:

01650-63203

16 data channels
1 clock channel

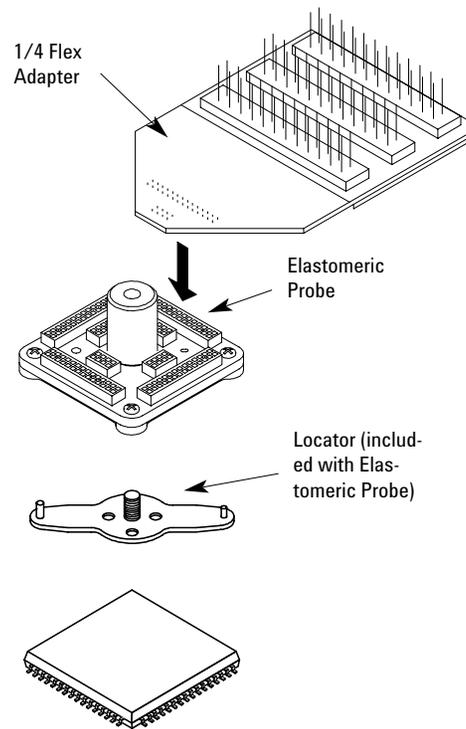

Agilent Product Number	Description
01650-63203	Standard Termination Adapter

Agilent Product Number	Description
E5339A	Low Voltage Termination Adapter
E5346A	High-Density Termination Adapter
E5351A	High-Density Adapter
E5346-44701	Recommended Support Shroud
E5346-60002	High Speed Mictor Break-out Adapter
E5346-68701	Five Mictor Connectors and Five Support Shrouds

Probing – TQFP, PQFP Adapters

Agilent Technologies' state-of-the-art probe adapters offer a simple means of connecting to PQFP and TQFP packages with minimal "keep out" area. Agilent's reliable probes ensure trouble-free electrical and mechanical connection.

Elastomeric Probe Adapter

Package Adapter	Pin Pitch	Elastomeric Probe	1/4 Flex Adapter
144-pin TQFP	0.5 mm	E5336A	E5340A
144-pin PQFP/CQFP	0.65 mm	E5361A	E5340A
160-pin QFP	0.5 mm	E5377A	E5349A
160-pin PQFP/CQFP	0.65 mm	E5373A	E5349A
176-pin TQFP	0.5 mm	E5348A	E5349A
208-pin PQFP/CQFP	0.5 mm	E5374A	E5371A
240-pin PQFP/CQFP	0.5 mm	E5363A	E5371A

Probing – Device Specific

(Processors, DSPs, Controllers, Busses, and Programmable Logic Devices)

This document lists available processor and bus support products from Agilent Technologies and complimentary vendors. Agilent and our partners provide an extensive range of quality tools that offer non-intrusive, full-speed, real-time analysis and processor execution control to accelerate your debugging process. The following steps help you to determine the necessary products to meet your specific measurement needs.

Simply:

1. Determine if your device is supported (pg 5)
2. Select the products that meet your measurement needs (pg 5)
3. Verify analyzer support and compatibility (pg 8)

The following provides information on how to use the matrix starting on page 21 to accomplish each step.

1. Determine if your device is supported

Device Coverage

Device Manufacturer or Architecture and Name	Max Bus Clk MHz	Pin Count, Pkg Type
---	--------------------------	---------------------------

- Use the “Device Coverage” section of the matrix to find your processor, controller, bus, or programmable logic device. Processors are listed alpha-numerically, except for Intel and Motorola, where processors are grouped by family.
- The value in the ‘Max Bus Clk MHz’ column refers to the maximum supported external bus speed for the processor. In most cases this is not the speed of the processor.

Example: Pentium with MMX has core speeds up to 233 MHz, but the external bus speed is 66 MHz.

- Supported package types are listed. In some cases an inverse assembler is separately available when the probing can be designed into the target. Check the notes column for available probing application notes and product literature for clearance requirements and target considerations.

Contact Agilent Technologies if you do not see support for your specific device . A sales representative can:

- determine if support is under development
- recommend third parties that design custom solutions
- direct you to information on how to design a test solution (refer to the probing section in this document)

2. Select the product(s) that meet your measurement needs.

Product Information

Product Type	Timing	State	Enhanced IA	Emulation	Setup Assist	3rd Party Vendor or Agilent Product Number	Price
--------------	--------	-------	-------------	-----------	--------------	--	-------

The “Product Information” section of the matrix lists the available products for each device. The diagrams and tables on pages 6-8 give a high level overview of what each product type includes, provides, and requires as well as specifying compatibility.

The following describes the different measurement modes.

Timing – Data is sampled at regular intervals by the analyzer’s internal clock. The captured trace is displayed as waveforms (asynchronous).

State – Clocking is supplied by the system under test and captured data is displayed as a sequential listing of logical states (synchronous). Included inverse assemblers convert the real-time trace into processor mnemonics.

Enhanced Inverse Assembler –Provides advanced filtering capabilities such as removal of unexecuted prefetches and certain cycle types. The specific filtering capabilities are processor dependent. Refer to the product literature for details.

Emulation – The product provides processor control including break, run, reset and single step, code download, and register/memory modification.

Setup Assistant – A menu driven interface that guides you through connecting and configuring a processor measurement. This feature is available on the Agilent 16600A and 16700 series frames.

Contact Agilent or the Appropriate Third Party for Your Selections

Contact an Agilent Technologies sales representative to order the products you have selected or to obtain more information. Agilent sales information as well as third-party contact information is listed on pg 55.

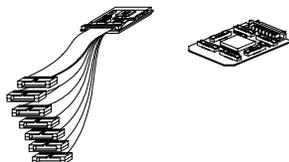

Real-Time Trace Products

Inverse Assembler

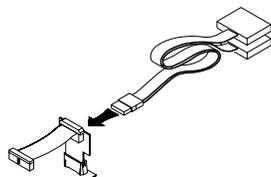

Software that converts a captured state trace into processor mnemonics.

Analysis Probes

(Formerly called Preprocessors)

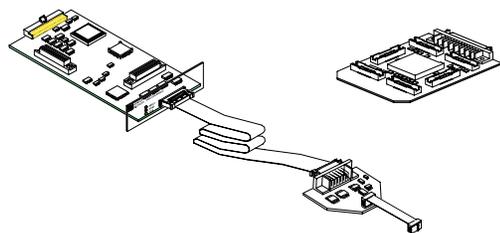

N-Trace Analysis Probe

Emulation Solution

Emulation Solution

Option required to specify processor package type (Bundle of processor products for easier ordering and configuration. Works with the Agilent 16600A and 16700 series logic analyzers).

Inverse Assembler	
Includes	<ul style="list-style-type: none"> Inverse assembler software
Provides	<ul style="list-style-type: none"> Converts real-time trace into processor mnemonics
Requires	<ul style="list-style-type: none"> Method for connecting to the processor either through the general purpose probes or through connectors designed onto the target

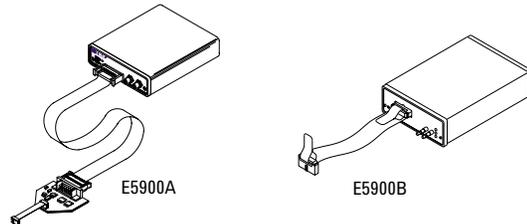

Analysis Probe	
Includes	<ul style="list-style-type: none"> Inverse assembler (for analysis probes that support state mode) and configuration files Analysis probe hardware (unless specified as inverse assembler only)
Provides	<ul style="list-style-type: none"> Mechanical and electrical connection to the processor or bus Real-time trace acquired in state and/or timing (supported modes of operation varies, check matrix for specific processor)
Requires	<ul style="list-style-type: none"> Appropriate logic analyzer channel count (refer to matrix)

N-Trace Analysis Probe	
Includes	<ul style="list-style-type: none"> E5346A cable, JTAG breakout board and configuration software
Provides	<ul style="list-style-type: none"> Runtime trace information through special messages (status) and data
Requires	<ul style="list-style-type: none"> Agilent 16600A or 16700 series frame with appropriate state/timing module Debugger (available on your platform from third party)

Emulation Solution	
Includes	<ul style="list-style-type: none"> Agilent B4620B Source Correlation tool set Analysis Probe with any necessary package adapters and Inverse Assembler Emulation Module
Provides	<ul style="list-style-type: none"> Correlation of real-time trace to high level source code Ability to set the logic analyzer trigger by clicking a line of source code Real-time trace acquired in state and/or timing (supported modes of operation varies, check table for specific processor) Processor control including break, run, reset and single step Code download Register/memory modification
Requires	<ul style="list-style-type: none"> "A" versions require Agilent 16600A or 16700 series frame with an available emulation module slot "B" versions require an Agilent 16700 Series frame with an available emulation module slot. Option to specify processor package type.
Compatibility	<ul style="list-style-type: none"> Debugger (available on your platform from a third party) "A" versions work with Agilent 16600A and 16700 standard Emulation Control Interface "B" versions work with Agilent 16700 standard Emulation Control Interface

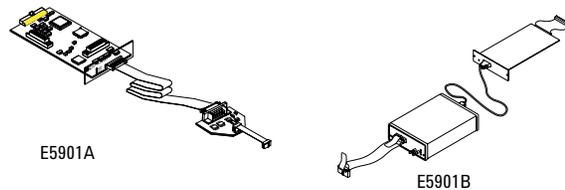

Emulation Products

Emulation Probe - Agilent E5900A/B (Formerly called Processor Probe or Software Probe) Option required to specify processor family

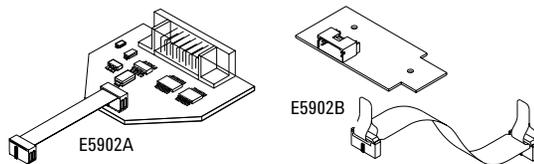

Emulation Probe- Agilent E5900A/B	
Includes	<ul style="list-style-type: none"> Standalone emulation probe, Target Interface Module (TIM), cables and firmware
Provides	<ul style="list-style-type: none"> Processor control including break, run, reset and single step Code download Register/memory modification
Requires	<ul style="list-style-type: none"> Option to specify processor family
Compatibility	<ul style="list-style-type: none"> Debugger (available on your platform from third party) E5900A works with Agilent 16600A and 16700 standard Emulation Control Interface E5900B works with Agilent 16700 standard Emulation Control Interface Controlled over LAN

Emulation Module - Agilent E5901A/B Option required to specify processor family

Emulation Module- Agilent E5901A/B	
Includes	<ul style="list-style-type: none"> Emulation Module, Target Interface Module (TIM), cables and firmware
Provides	<ul style="list-style-type: none"> Processor control including break, run, reset and single step Code download Register/memory modification
Requires	<ul style="list-style-type: none"> E5901A works with Agilent 16600A and 16700 series mainframes with an available emulation module slot E5901B works with Agilent 16700 series mainframe with an available emulation module slot Option to specify processor family
Compatibility	<ul style="list-style-type: none"> Debugger (available on your platform from third party) E5901A works with Agilent 16600A and 16700 standard Emulation Control Interface E5901B works with Agilent 16700 standard Emulation Control Interface

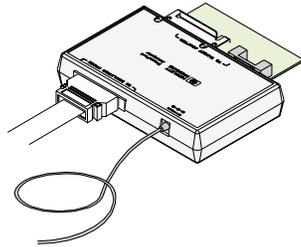

Emulation Migration - Agilent E5902A/B Option required to specify processor family

Emulation Migration- Agilent E5902A/B	
Includes	<ul style="list-style-type: none"> Target Interface Module (TIM), cables and firmware
Provides	<ul style="list-style-type: none"> Processor personality change for existing emulation module or probe
Requires	<ul style="list-style-type: none"> Existing emulation module or probe Option to specify processor family

Emulation Products

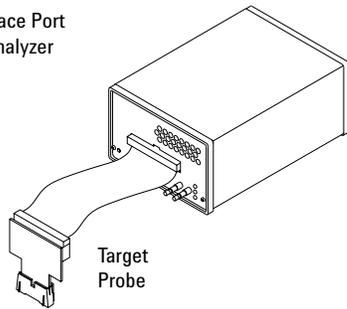

Trace port analyzer - Agilent E5903A
 Option required to specify processor family

Trace port analyzer- Agilent E5903A	
Includes	• Trace port analyzer module, Target Interface Module (TIM), power supply, and cables
Provides	• Runtime trace information through special messages (status) and data
Requires	• Emulation probe or emulation module
Compatibility	• Debugger (available on your platform from third party)

Trace port analyzer - Agilent E5904B
 Option required to specify processor family

Trace Port Analyzer

Trace port analyzer- Agilent E5904B	
Includes	• Trace port analyzer, target probe, power supply and cables
Provides	• Runtime trace information through special messages (status) and data • Processor control including break, run, reset, and single step • Code download • Register/memory modification
Requires	• Debugger (Available on your platform from third party) • Option to specify processor family
Compatibility	• Controller over LAN

Logic Analysis Systems (Acquisition)

3. Verify analyzer support/compatibility

Agilent Technologies

Logic Analyzer Support

Products Discontinued

Min # Pods for IA / Max #	16700A/B Series with ...	16600A Series	16500C with ...	1670G Series
	1675X, 16715/6/7/8/9	16600	16550	1670

	16557	16602		1672
		16603		1673

Use the “Logic Analyzer Support” section of the matrix to determine compatibility between the processor support product(s) you have selected and an existing analyzer to decide which frame and/or modules to purchase.

- The matrix lists a minimum and maximum number of pods for analyzing a device. The minimum pod count provides enough signals for the inverse assembler to interpret the captured data and display processor mnemonics. The maximum pod count provides access to additional signals that could be useful during system debug.

Example: The MPC860 BGA shows 6/12 which means the analysis probe requires 6 pods for inverse assembly. Six additional pods (for a total of twelve pods) could be used for analysis of additional signals.

- The analyzer support recommendations are based on the minimum pod count required for inverse assembly. Two methods are used for signifying analyzer support. A number represents the number of modules required. A check mark (√) signifies the analyzer has enough built-in acquisition channels to meet the minimum pod requirements.

Your mainframe and measurement module selection depends on:

- Number of analysis channels needed
- Optional measurement ability
- Future expansion capability
- Emulation requirements
- Form factor
- Budget

Frame offerings:

Agilent Technologies 16700B Series (pg 10): 5 Slot modular frame with expansion capability, supports 1 emulation module or 1 multiframe module.

Agilent Technologies 16700A Series (pg 11): 5 slot modular frame with expansion capability, supports 2 emulation modules.

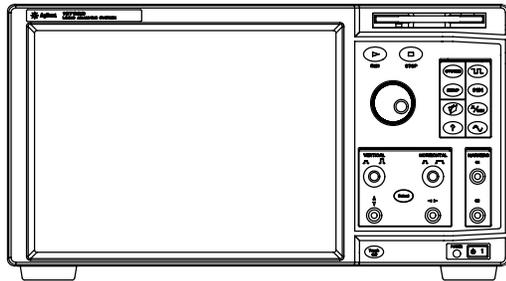

Agilent Technologies 1670G Series (pg 16): Benchtop analyzer with built-in acquisition. Choices include logic analyzer, logic analyzer with integrated pattern generator, and logic analyzer with integrated oscilloscope. Versions of each vary by channel count.

High level details are provided in this document for the logic analysis systems and modules. If more information is needed, please obtain the following documents.

Agilent Technologies Product	Literature
Agilent Technologies 16700 Series Logic Analysis System	5968-9661E
1670G Series Benchtops	5968-6421E

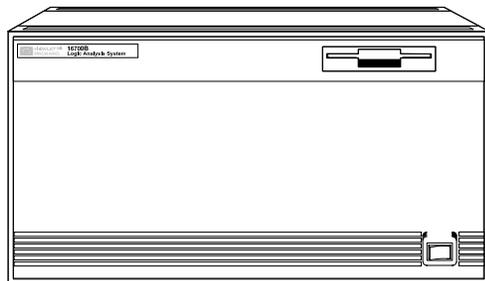

Agilent Technologies 16700B Series Mainframes

Agilent 16702B

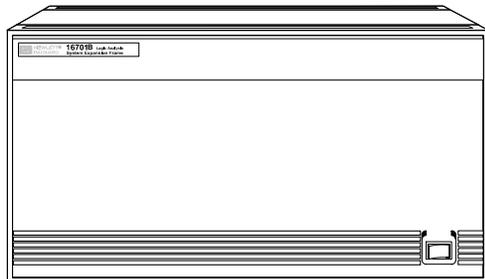

Agilent Model Number	Agilent 16702B
Display	12.1" 800x600 Color Flat Panel Display with touchscreen
Built-in Analysis Channels	None – Requires measurement modules
Supports Expansion frame	Yes – Agilent 16701A or 16701B
Available Measurement Module slots	5 (Total of 10 with Agilent 16701A or 16701B expansion frame)
Available Emulation Module slots	1 (Total of 3 with 16701A or 16701B expansion frame)
Internal System RAM	128 Mbyte standard
Supported Monitor Resolution	1280 x 1024 standard
Mass Storage	9 Gbyte hard disk drive, 1.44 Mbyte DOS formatted floppy drive
CD Rom Drive	40X Built-in standard

Agilent 16700B

Agilent Model Number	Agilent 16700B
Display	Monitor sold separately
Built-in Analysis Channels	None – Requires measurement modules
Supports Expansion frame	Yes – Agilent 16701A or 16701B
Available Measurement Module slots	5 (Total of 10 with Agilent 16701A or 16701B expansion frame)
Available Emulation Module slots	1 (Total of 3 with 16701A or 16701B expansion frame)
Internal System RAM	128 Mbyte standard
Supported Monitor Resolution	1280 x 1024 standard
Mass Storage	9Gbyte hard disk drive, 1.44 Mbyte DOS formatted floppy drive
CD Rom Drive	40X Built-in standard

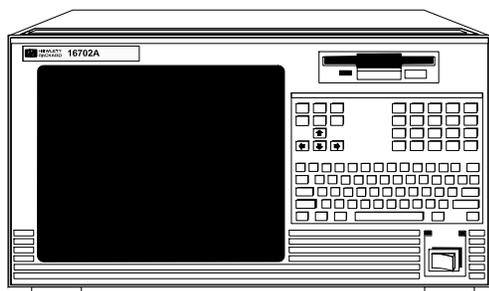

Agilent 16701B

Agilent Model Number	Agilent 16701B (Requires Agilent 16702A, 16702B, 16700A, or 16700B)
Display	N/A
Built-in Analysis Channels	None – Requires measurement modules
Supports Expansion frame	N/A
Available Measurement Module slots	5
Available Emulation Module slots	2

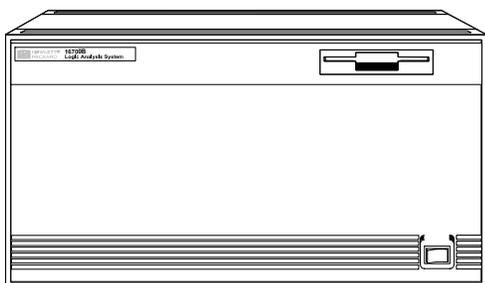

Agilent Technologies 16700A Series Mainframes

Agilent 16702A

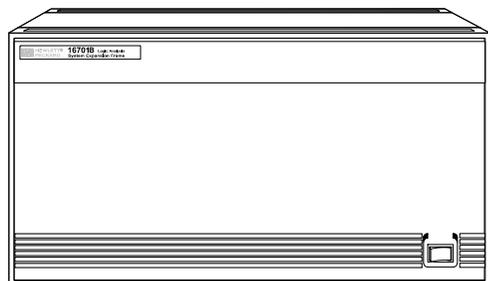

Agilent Model Number	Agilent 16702A
Display	10.3" 800x600 Color Flat Panel Display
Built-in Analysis Channels	None – Requires measurement modules
Supports Expansion frame	Yes – Agilent 16701A or 16701B
Available Measurement Module slots	5 (Total of 10 with Agilent 16701A or 16701B expansion frame)
Available Emulation Module slots	2 (Total of 4 with 16701A or 16701B expansion frame)
Internal System RAM	64 Mbyte standard
Supported Monitor Resolution	1280 x 1024 standard
Mass Storage	4 Gbyte hard disk drive, 1.44 Mbyte DOS formatted floppy drive
CD Rom Drive	Available via Option #004

Agilent 16700A

Agilent Model Number	Agilent 16700A
Display	Monitor sold separately
Built-in Analysis Channels	None – Requires measurement modules
Supports Expansion frame	Yes – Agilent 16701A or 16701B
Available Measurement Module slots	5 (Total of 10 with Agilent 16701A or 16701B expansion frame)
Available Emulation Module slots	2 (Total of 4 with 16701A or 16701B expansion frame)
Internal System RAM	64 Mbyte standard

Measurement Modules

- State/Timing
 - Oscilloscope
 - High-Speed Timing
 - Pattern Generator
- (Require mainframe with available measurement module slot)

State and timing logic analyzers support inverse assembly, which is used for most processor and bus measurements. You may want to consider additional measurement capability to provide a complete signals to source debug environment.

State/Timing Logic Analysis Modules

(Select according to channel count, acquisition speed, and memory depth needs)

Agilent Model Number	Agilent 16557D		Agilent 16710A	Agilent 16711A	Agilent 16712A
	1-4 Modules	5 Modules			
Channels (Pods) per module	68 (4 Pods)		102 (6 Pods)	102 (6 Pods)	102 (6 Pods)
Maximum channels (modules) on a single time base and trigger	272 (4 modules)	340 (5 modules)	204 (2 modules)	204 (2 modules)	204 (2 modules)

Maximum Transitional Timing	333 MHz	333 MHz	333 MHz	400 MHz	400 MHz	400 MHz
Maximum State Clock	167 MHz	167 MHz	333 MHz	400 MHz	400 MHz	400 MHz
Memory depth (full/half channels)	2 / 4 M *	512K / 1 M*	2/4 M*	4/8 M*	16/32 M*	32/64 M*

* Increased memory depth in half channel timing mode only.

Oscilloscope Modules

Agilent Model Number	Agilent 16533A	Agilent 16534A
Channels/Module	2	
Channels on a single time base and trigger	8	
Maximum Sample Rate	1 GSa/s	2 GSa/s
Bandwidth	250 MHz	500 MHz
Vertical Resolution	8 bits	
Memory Depth per channel	32 K	

High-Speed Timing Module

Agilent Model Number	Agilent 16517A/18A (Agilent 16518A requires Agilent 16517A, Max of 4 Agilent 16518A expander modules per Agilent 16517A)
Channels/module	16
Maximum channels on a single time base	80
Maximum timing sample rate	Conventional 2/4 GHz (full/half channels)
Maximum state sample rate	1 GHz Synchronous State
Memory Depth	64/128K* (full/half channel)

* Increased memory depth in half channel timing mode only.

High-Speed State/Timing Module (Including Differential Capability)

Agilent Model Number	Agilent 16760A
Channels/module	34
Maximum channels on a single time base	170 (5 modules)
Maximum state clock (full/half channels)	800 Mb/s / 1.25Gb/s
Maximum timing sample rate	800 MHz
Maximum transitional timing sample rate	400 MHz
Memory Depth	64 M

Pattern Generator Module

Agilent Model Number	Agilent 16522A			Agilent 16720A	
	Up to 5 modules can be interconnected. Order at least one clock pod for each module used as a master, and at least one data pod for every 8 output channels			Up to 5 modules can be interconnected. Order at least one clock pod for each module used as a master, and at least one data pod for every 8 output channels	
Maximum Clock	200 MHz	100 MHz	50 MHz	300 MHz	180 MHz
Number of data channels per module	20	40	40	24	48
Maximum vector width (5 module system)	100 bits	200 bits	200 bits	120 bits	240 bits
Memory depth, in vectors	258,048			16M	8M
"IF" command	No	No	Yes	No	No

Pattern Generator Clock and Data Pods for 16522A, 16720A, and 1670G Series Option #004

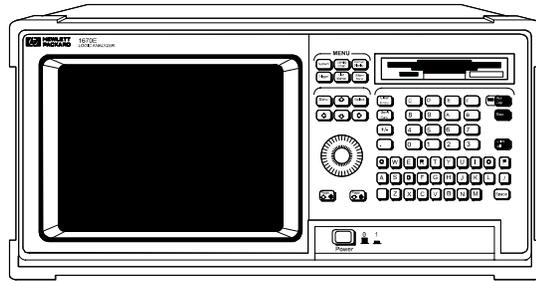

Option Number	Description
#011	TTL Clock Pod and Lead Set
#013	3-State TTL/CMOS Data Pod and Lead Set
#014	TTL Data Pod and Lead Set
#015	2.5V Clock Pod and Lead Set
#016	3-State 2.5 V Data Pod and Lead Set
#017	3.3V Clock Pod and Lead Set
#018	3-State TTL/3.3V Data Pod and Lead Set
#021	ECL Clock Pod and Lead Set

1670G Benchtop Analyzers

Agilent Model Number	Agilent 1670G	Agilent 1671G	Agilent 1672G	Agilent 1673G
State and Timing Channels (Pods)	136 (8 Pods)	102 (6 Pods)	68 (4 Pods)	34 (2 Pods)
Timing Analysis	Conventional: 250 MHz all channels, 500 MHz half channels			
State Analysis Speed	150 MHz, all channels			
Memory Depth per Channel	64K per channel, 128K in half-channel mode			
Option 001	256K per channel, 512K in half-channel mode			
Option 002	2M per channel, 4M in half-channel mode			

Option Number	Description
001	256K Memory
002	2M Memory
003	Scope
004	Pattern Gen
005	Training Kit

Oscilloscope key specifications and characteristics (Option # 003 only)	
Channels	2
Maximum Sample Rate	2 GSa/s per channel
Bandwidth	dc to 500 MHz (dc coupled)
Rise Time	700 ps
Vertical Resolution	8 bits
Memory Depth per Channel	32k samples

32-channel pattern generator key specifications and characteristics (Option # 004 only) (See pg 13 for clock and data pod options)			
Maximum Clock Speed	200 MHz	100 MHz	50 MHz
Number of Data Channels	16	32	32
Memory Depth, in vectors	258,048		
"IF" Command	No	No	Yes

Analysis Tools

 Products Discontinued

Application Software	Frame Compatibility					
Description	16700A/B Series	16600A Series	16500C	1670G Series	3rd Party Vendor or Agilent Product Number	Notes:
Source Correlation Tool Set The Source Correlation tool set provides a link between your trace listing and high-level source code language. A trace is displayed in both high-level source code as well as microprocessor mnemonics.	√	√			Agilent B4620B	Product Literature: 5968-9661E
Tool Development Kit - Customize your trace for greater insight. Development environment for creating custom tools using the C programming language. Custom tools can analyze captured data and present it in a form that makes sense to you. Analysis systems do not require the Tool Development kit to run generated tools.	√	√			Agilent B4605B	
System Performance Analysis (SPA) Tool Set The SPA tool generates statistical representations of data captured by the measurement modules. SPA helps you optimize system performance by helping you (1) find the routines that are called most often in your system, (2) identify inefficient peripheral use, and (3) find processes that use too much CPU time.	√	√			Agilent B4600B	
Serial Analysis Tool Set Converts acquired serial bit streams to parallel format for easy viewing and analysis.	√	√			Agilent B4601B	
BestLink/16700 BestLink/16700 is a powerful and easy to use bidirectional data link between Agilent Logic Analyzers and VHDL/Verilog simulators. BestLink/16700 processes very fast the large datasets typically acquired with the large memory depths state/timing Logic Analysis modules such as the Agilent 16557D or large simulation datasets to program the Agilent 16552A pattern generator modules.	√				Diagonal Systems	Free Demo Available www.diagonal.com
WAVE-Link 16500 WAVE-Link allows you to send stimulus to the Agilent 16522A pattern generator or capture circuit response from the actual hardware with the logic analyzer modules.			√		Diagonal Systems	

Analysis Tools (continued)

 Products Discontinued

Application Software	Frame Compatibility					Notes:
Description	16700A Series	16600A Series	16500C	1670G Series	3rd Party Vendor or HP Product Number	
<p>WaveFormer Pro WaveFormer Pro can read the waveform files produced by Agilent's logic analyzers into its timing diagram editing and simulation environment. Users can document the captured waveforms or generate simulation stimulus files in VHDL, Verilog, SPICE, ABEL, and other waveform formats. Simulation supports continuous setup and hold checking on captured waveforms. WaveFormer Pro can also produce stimulus for the Agilent 16522A or 16720A Pattern Generator.</p>	√	√	√	√	SynaptiCAD	Free Demo Available www.syncad.com
<p>VeriLogger Pro VeriLogger Pro is a full featured Verilog simulator with an integrated waveform viewer which supports Agilent Logic Analyzers and Agilent Pattern Generators. Agilent waveform files can be combined directly with simulation models. The project environment supports multiple Agilent waveform files and provides waveform comparison.</p>	√	√	√	√	SynaptiCAD	
<p>TestBencher Pro TestBencher Pro is a VHDL/Verilog test bench and bus-functional model generator. It can take several Agilent logic analyzer waveform files and combine them to produce reactive bus-functional models of the system under test. Supports waveform comparison, continuous setup and hold checking, and spot sample checking.</p>	√	√	√	√	SynaptiCAD	

Protocol Analysis Tools

Description	Supported Modules	Bus	Protocols	Trigger Macros	Product Number	Notes *
Data Communications Tool Set	16715/6/7/8/9 and 1675X	• MII, GMII	• Ethernet (<100Mbits)	Yes	B4640B	Product Literature: 5968-9661E Requires access to Utopia Bus
		• Utopic (Levels 1-3)	• ATM – AAL1 – AAL2 – AAL5 (aka MPOA multi protocol over ATM)			
		• POS-PHY (Levels 1-3)	• Packet over SONET (PPP)			
MPEG-2 Protocol Analysis Tool Set	16715/6/7/8/9 and 1675X		• MPEG-2	Yes	B4645B	
Gigabit Ethernet Protocol Analysis Tool	16715/6/7/8/9 and 1675X	• TBI (Ten Bit Interface)	• Ethernet	N/A	N4212A	Requires access to TBI Bus Port
InfiniBand Protocol Analysis Tool	16715/6/7/8/9 and 1675X	• Agilent SERDES	• InfiniBand	N/A	N4206A	Requires designing Mictor Connectors into the board Includes support for any 10B Serializer-Deserialzer

* All tools require 16700 Series system software version A.02.20.00

Third Party Debugger Support

Debuggers from several companies control Agilent Technologies emulation probes and emulation modules. Connections to Agilent debugging tools through familiar interfaces provide access to emulation features so that in-circuit debugging becomes an extension of the software debugging process under way.

The following debuggers connect to Agilent emulation probes and emulation modules providing support for a variety of processor architectures and real-time operating systems. Contact your Agilent sales representative for detailed connection information.

Processor Family	Available Debuggers
ARM 7,9 Thumb®	ARM,GHS,WindRiver
ARM 7,9 - ETM	ARM, GHS
IBM PPC4XX	Microtec/Mentor, SDS, WindRiver
IBM PPC6XX	GHS, Microtec/Mentor, SDS, WindRiver
IBM PPC7XX	GHS, Microtec/Mentor, SDS, WindRiver
Pentium and Pentium w/MMX processors	CAD-UL
Pentium II, Pentium Pro and Pentium II mobile processor	American Arium
Motorola MPC5XX	GHS, Microtec/Mentor, SDS, WindRiver
Motorola PPC6XX	GHS, Microtec/Mentor, SDS, WindRiver
Motorola PPC7XX	GHS, Microtec/Mentor, SDS, WindRiver
Motorola PPC7400	GHS
Motorola MPC8XX	GHS, Microtec/Mentor, SDS, WindRiver
Motorola MPC82XX	GHS, Microtec/Mentor, SDS, WindRiver
CPU32	GHS, Microtec/Mentor, SDS
M-core	SDS, GHS
Toshiba Tx19/39	GHS

Example Configuration

Measurement Requirements

Your target has an MPC 860 in a BGA package. You need to capture real time traces as well as control the processor. What tools are available to support this processor?

- Determine if your device is supported.
Search through the matrix alphabetically. Note that your processor is listed on pg. 35. The MPC 860 section of the matrix is shown below.
- Select the product(s) that meet your measurement needs
The matrix lists several available products. Use pages 6-7 to review each product type's abilities. The E9484B #002 emulation solution provides the measurement capabilities you desire for the MPC 860 BGA. Refer to the literature listed in the notes to verify clearance requirements for the analysis probe.
- Verify analyzer support and compatibility
The matrix shows that for the E9484B #002 the logic analyzer choices are the Agilent 16700A/B Series with a selection of modules. "MPC860 Configuration Solution" lists products for a complete solution.

MPC860 Configuration Solution

Frame: Agilent 16700B
Agilent 16700B #001 Monitor
Agilent 16700B #003 Memory Performance Upgrade
256 MB total RAM, 4 MB video RAM

Acquisition: Agilent 16717A (Quantity 2 for minimum configuration, quantity 3 to cover all of the pins)

Processor Support: Agilent E9484B #002 (Includes Emulation Module, Analysis Probe, and Source correlation tool set.)
Debugger (from third party)

Optional Measurement Modules: Agilent 16534A Oscilloscope
Agilent 16720A Pattern Generator for Stimulus

Motorola PowerPC 5XX Family																		
MPC505/509	160-PQFP		Anly Prb	√ √ √	E9585A #002	6/10	2	1	2	√	√	√	1	2	√	√	E9585A #002-Former product#E2490A E5900A#050-Former product#E3456A Inverse assembler supports trace reconstruction. The trace reconstruction tool makes use of indirect branch show cycles and reconstructs the full software trace. This allows the processor to run full-speed from internal flash or cache. Analysis Probe requires emulation module or probe to configure for address reconstruction. Analysis probe is four way rotatable. Emulation products can connect directly to BDM port via the analysis probe for the MPC 505/509. MPC555 requires a BDM port on the target. Custom probing application note for IA only analysis: 5968-2502E. Product Literature 5968-2504E

Consider the B4601B Serial Analysis tool set for your serial bus measurements. The serial analysis tool works with the 16600A and 16700 series logic analysis systems. The tool converts acquired serial bit streams to parallel format for easy viewing and analysis. It also allows you to process frame information to isolate the data you want to analyze. See the Application Software (pg. 17) section of this document for more details.

Old to New Model Number Compatibility Table

Analysis Probes

Former Product Number	Description	New Analysis Probe Product Number
E2448B	Motorola 68360 analysis probe for 241-pin PGA	E9590A #002
E8123A ¹	Motorola 68360 analysis probe for 240-pin PQFP	E9590A #003
E2449B	Motorola PowerPC 603 analysis probe. Inverse Assembler (custom probing only)	E9587A #001
E2455B	Motorola PowerPC 603 analysis probe for 240-pin PQFP	E9587A #002
E2457A	Intel Pentium analysis probe for 296-pin SPGA	E9592A #002
E2476B	Motorola MPC 860/821 analysis probe for 357-pin BGA	E9584B #002
E2477A	Motorola MPC 860/821 analysis probe. Inverse assembler (custom probing only)	E9584B #001
E2490A	Motorola 505/509 analysis probe for 160-pin PQFP	E9585A #002
E2493A	ARM7TDMI analysis probe. Inverse assembler (custom probing only)	E9595A #001
E2498A	Motorola MPC 740/750 analysis probe. Inverse assembler (custom probing only)	E9586A #001
E8115A ²	Motorola 68331/2/4/5 analysis probe for 132-pin PQFP	E9589A #002
E8116A ²	Motorola 68331/2/4/5 analysis probe for 144-pin TQFP	E9589A #003
E8118A ²	Motorola 68336/76 analysis probe for 160-pin PQFP	E9596A #002

1. Comprised of E2448B and the necessary adapters.

2. Comprised of E2480A and the necessary adapters.

Emulation Probes

Former Product Number	Description	New Emulation Probe Product Number
E3455A	Motorola M-Core emulation probe	E5900A #090
E3456A	Motorola MPC5XX emulation probe	E5900A #050
E3458A	Motorola 6833X4X/6X/7X emulation probe	E5900A #030
E3491B	Intel Pentium emulation probe	E5900A #500
E3493B	Intel Pentium II emulation probe	E5900A #510

Third Party Contact Information

The following companies provide products that complement Agilent Technologies logic analyzers. Agilent works closely with these companies to insure quality products, but the third party is ultimately responsible for functionality, pre-sales support, post-sales support, and warranty. For companies listed below with a "resell code", their products are also available from Agilent's Corporate Price List. For resale products, the third party is still responsible for functionality, pre-sales support, post-sales support, and warranty.

(For additional US and International Sales Offices, check the web site of the specific Channel Partner.)

ALD (Premier Channel Partner)

Advanced Logical Design, Inc. **Resell Code: ALO-xxxxx**
12280 Saratoga-Sunnyvale Rd., Suite 201
Saratoga, CA 95070

Warranty

Agilent Technologies hardware products are warranted against defects in materials and workmanship for a period of one year from date of shipment. Some newly manufactured Agilent products may contain remanufactured parts, which are equivalent to new in performance. If you send notice of defects during the warranty period, Agilent will either repair or replace hardware products that prove defective.

Our software and firmware products that are designated by us for use with a hardware product are warranted for a period of 90 days to execute their programming instructions, when properly installed. If you send us notice of defects in materials and workmanship during the warranty period, we will repair or replace these products, so long as the defect does not result from buyer-supplied hardware or interfacing. The warranty period is controlled by the warranty statement included with the product and begins on the date of shipment.

Agilent Technologies' Test and Measurement Support, Services, and Assistance

Agilent Technologies aims to maximize the value you receive, while minimizing your risk and problems. We strive to ensure that you get the test and measurement capabilities you paid for and obtain the support you need. Our extensive support resources and services can help you choose the right Agilent products for your applications and apply them successfully. Every instrument and system we sell has a global warranty. Support is available for at least five years beyond the production life of the product. Two concepts underlay Agilent's overall support policy: "Our Promise" and "Your Advantage."

Our Promise

Our Promise means your Agilent test and measurement equipment will meet its advertised performance and functionality. When you are choosing new equipment, we will help you with product information, including realistic performance specifications and practical recommendations from experienced test engineers. When you use Agilent equipment, we can verify that it works properly, help with product operation, and provide basic measurement assistance for the use of specified capabilities, at no extra cost upon request. Many self-help tools are available.

Your Advantage

Your Advantage means that Agilent offers a wide range of additional expert test and measurement services, which you can purchase according to your unique technical and business needs. Solve problems efficiently and gain a competitive edge by contracting with us for calibration, extra-cost upgrades, out-of-warranty repairs, and on-site education and training, as well as design, system integration, project management, and other professional services. Experienced Agilent engineers and technicians worldwide can help you maximize your productivity, optimize the return on investment of your Agilent instruments and systems, and obtain dependable measurement accuracy for the life of those products.

For more assistance with your test & measurement needs or to find your local Agilent office go to:

www.agilent.com/find/assist

Or contact the test and measurement experts at Agilent Technologies
