## **Rack Considerations**

Before beginning these procedures, make sure you understand and follow these precautions:

**WARNING:** To reduce the risk of personal injury or damage to the equipment, be sure that:

The leveling jacks are extended to the floor.

The full weight of the rack rests on the leveling jacks.

The stabilizing feet are attached to the rack, if it is a single-rack installation.

The racks are coupled in multiple-rack installations.

Only one component is extended at a time. (A rack may become unstable if more than one component is extended for any reason.)

# Installation

## Step 1

Secure a pair of 25-inch rail adapters to the rack, attaching one adapter to the back of the right rail and one adapter to the back of the left rail. Position the 25-inch rail adapter in the appropriate location and insert and tighten two self-tapping screws.

## Step 2

Secure the inner mounting rail to the adapter with a 10-32 nutbar:

Insert a 10-32 screw through a flat washer ①, then through the inner mounting rail ②, through the 25-inch rail adapter ③, and into a 10-32 nutbar ④. Tighten the screw. Repeat to add a second screw.

***Installation is complete.***
