

If you have netstation.java.rte version 1.1.0.7 or below, installed on your AIX system, then you must do the following to make your IBM Network Station product Y2K compliant:

- make sure you are the root administrator
- download classes.zip from this internet site
- mv classes.zip /usr/netstation/java
- chown bin.bin /usr/netstation/java/classes.zip
- chmod 644 /usr/netstation/java/classes.zip

NOTE:

If you currently use tftp protocol in your Network Station environment then you must also do the following:

- unzip /usr/netstation/java/classes.zip
