

IntelliStation M Pro

Type 6219

Installation Guide

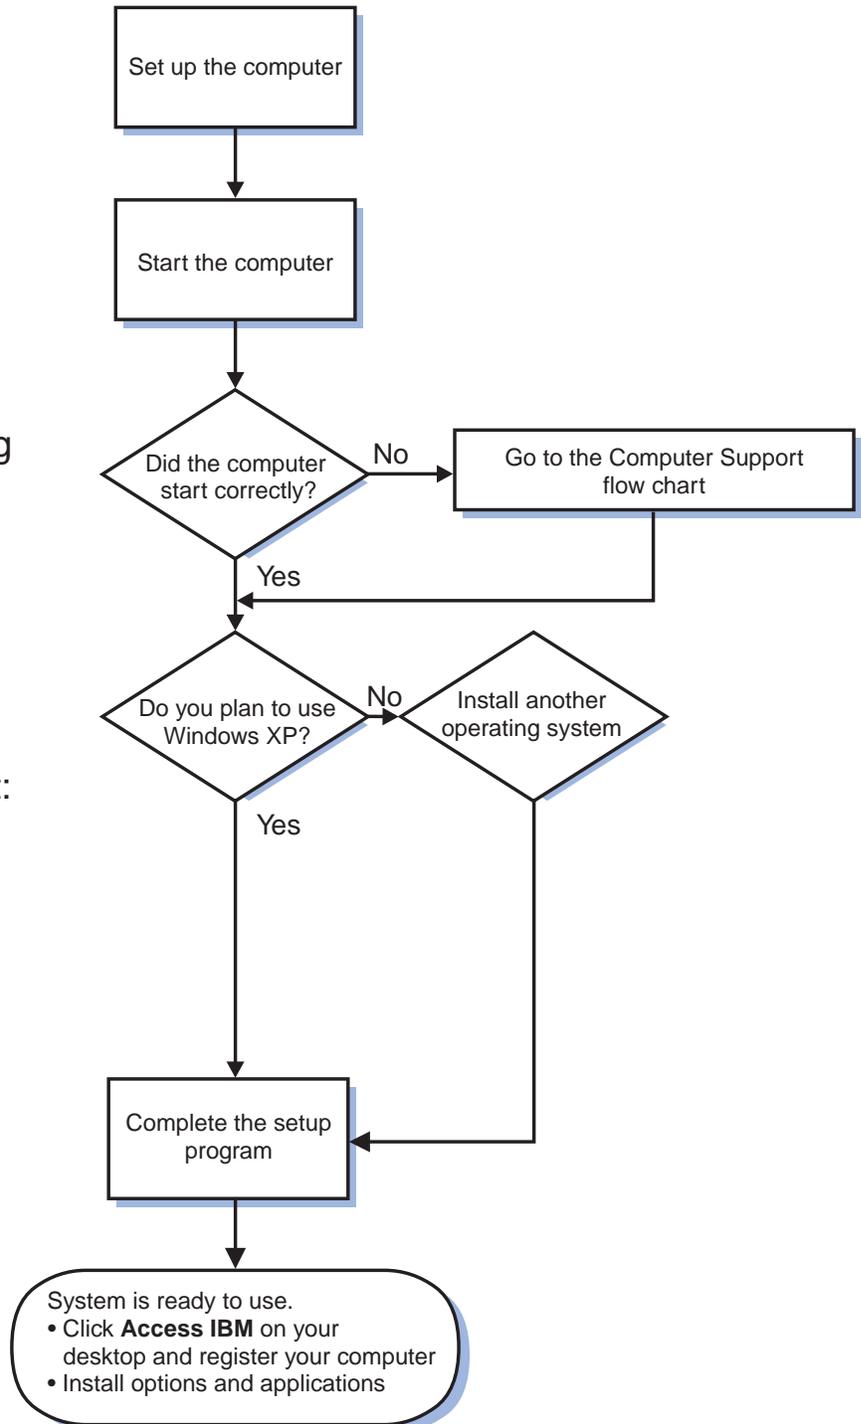

Welcome...

Thank you for buying an IBM IntelliStation M Pro computer.

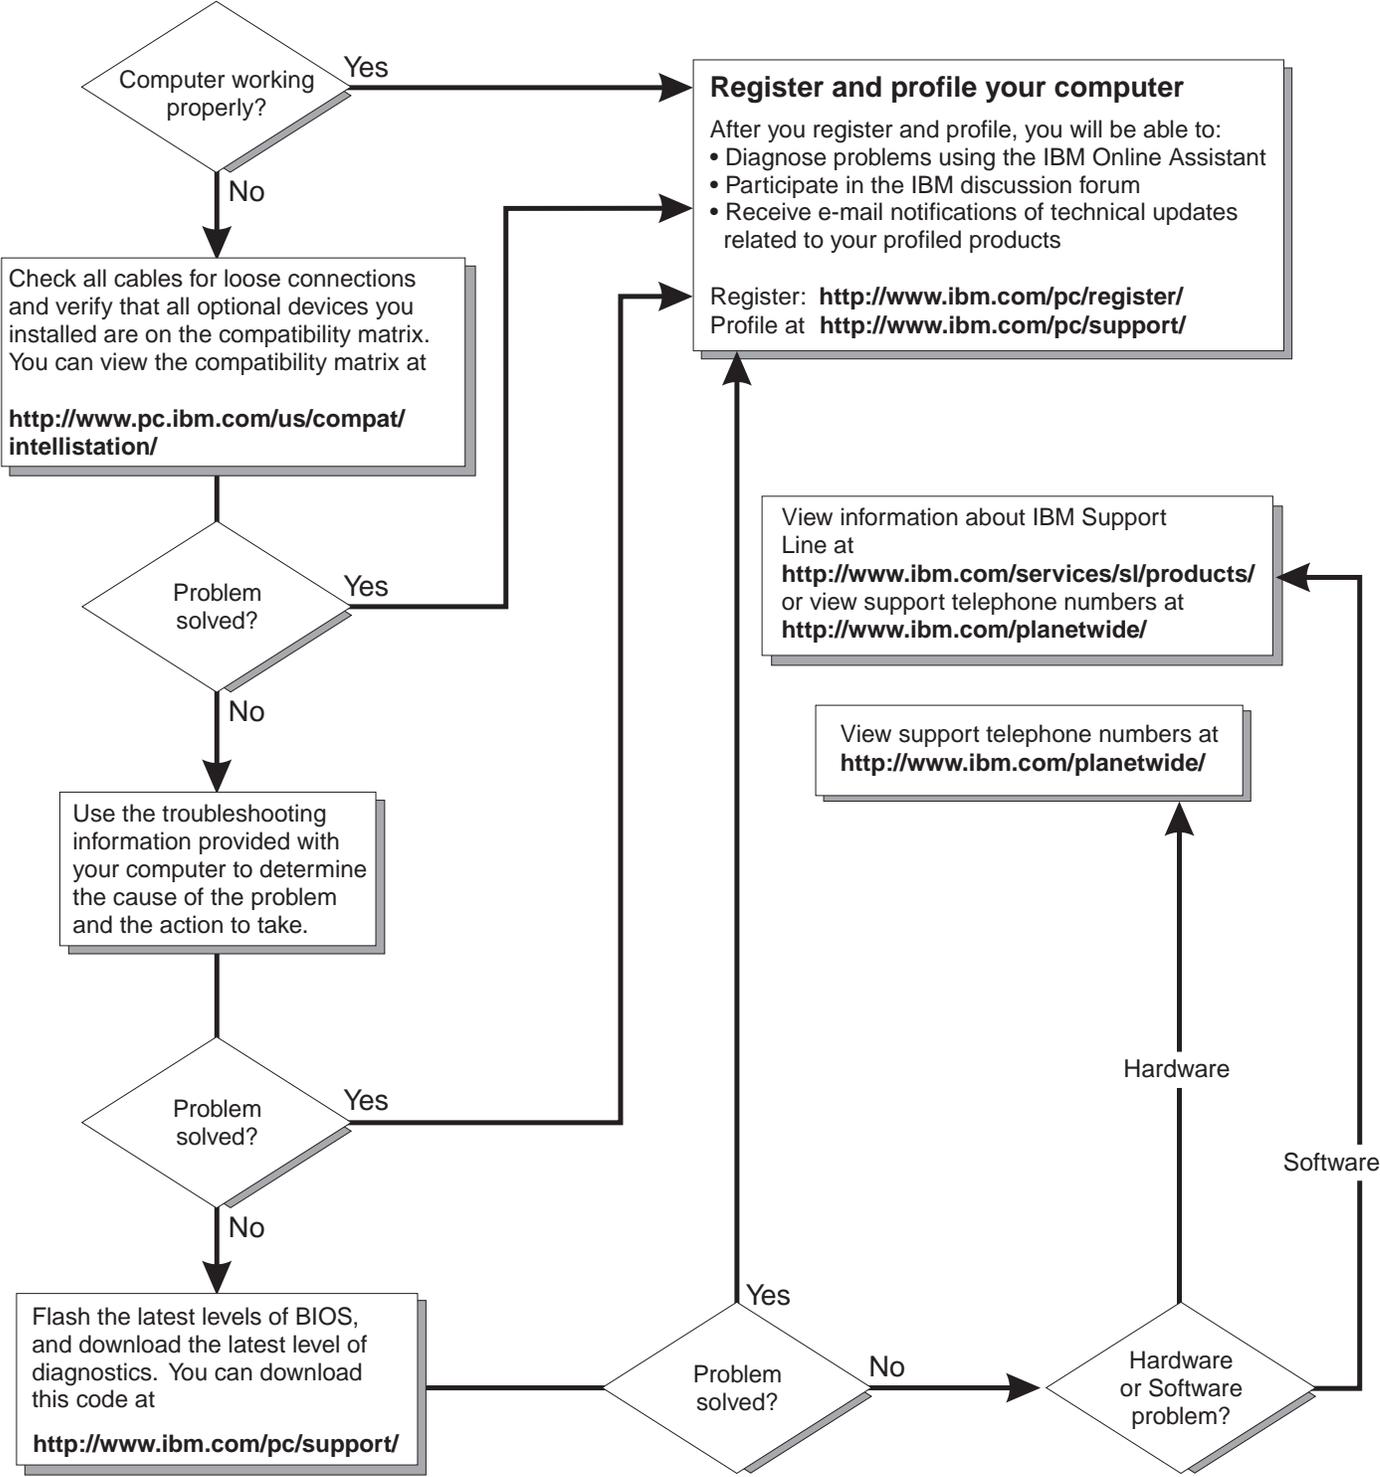

This *Installation Guide* contains information for setting up, installing options, and configuring your computer.

This book also contains information for every day use, and solving problems.

You can find the most current information about your computer on the IBM Web site at: <http://www.ibm.com/pc/support>

Statement 1

| |
|---|
| <p>Danger</p> <p>Electrical current from power, telephone, and communication cables is hazardous.</p> <p>To avoid a shock hazard:</p> <ul style="list-style-type: none">• Do not connect or disconnect any cables or perform installation, maintenance, or reconfiguration of this product during an electrical storm.• Connect all power cords to a properly wired and grounded electrical outlet.• Connect to properly wired outlets any equipment that will be attached to this product.• When possible, use one hand only to connect or disconnect signal cables.• Never turn on any equipment when there is evidence of fire, water, or structural damage.• Disconnect the attached power cords, telecommunications systems, networks, and modems before you open the device covers, unless instructed otherwise in the installation and configuration procedures.• Connect and disconnect cables as described in the following table when installing, moving, or opening covers on this product or attached devices. |
|---|

| | |
|---|---|
| <p>To connect:</p> <ol style="list-style-type: none">1. Turn everything OFF.2. First, attach all cables to devices.3. Attach signal cables to connectors.4. Attach power cords to outlet.5. Turn device ON. | <p>To disconnect:</p> <ol style="list-style-type: none">1. Turn everything OFF.2. First, remove power cords from outlet.3. Remove signal cables from connectors.4. Remove all cables from devices. |
|---|---|

Statement 2

CAUTION:
When replacing the lithium battery, use only IBM Part Number 33F8354 or an equivalent type battery recommended by the manufacturer. If your system has a module containing a lithium battery, replace it only with the same module type made by the same manufacturer. The battery contains lithium and can explode if not properly used, handled, or disposed of.

- Do not:**
- Throw or immerse into water.
 - Heat to more than 100°C (212°F)
 - Repair or disassemble

Dispose of the battery as required by local ordinances or regulations.

Statement 3

CAUTION:

When laser products (such as CD-ROMs, DVD drives, fiber optic devices, or transmitters) are installed, note the following:

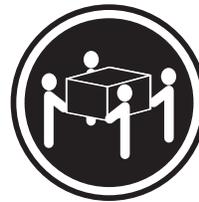

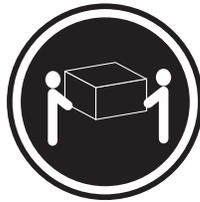

- Do not remove the covers. Removing the covers of the laser product could result in exposure to hazardous laser radiation. There are no serviceable parts inside the device.
- Use of controls or adjustments or performance of procedures other than those specified herein might result in hazardous radiation exposure.

Danger

Some laser products contain an embedded Class 3A or Class 3B laser diode. Note the following. Laser radiation when open. Do not stare into the beam, do not view directly with optical instruments, and avoid direct exposure to the beam.

Statement 4

≥18 kg (39.7 lb)

≥32 kg (70.5 lb)

≥55 kg (121.2 lb)

CAUTION:

Use safe practices when lifting.

Statement 5

CAUTION:

The power-control button on the device and the power switch on the power supply do not turn off the electrical current supplied to the device. The device also might have more than one power cord. To remove all electrical current from the device, ensure that all power cords are disconnected from the power source.

Statement 8

CAUTION:
Never remove the cover on a power supply or any part that has the following label attached.

Hazardous voltage, current, and energy levels are present inside any component that has this label attached. There are no serviceable parts inside these components. If you suspect a problem with one of these parts, contact a service technician.

Statement 23

CAUTION:
Do not place any object weighing more than 50 kg (110 lb) on top of rack-mounted devices.

>50 kg (110 lb)

Declaración 23

PRECAUCIÓN:

No coloque ningún objeto que pese más de 50 kg (110 libras) encima de los dispositivos montados en bastidor.

>50 kg (110 libras)

Hinweis 23

ACHTUNG:

Keine Gegenstände, die mehr als 50 kg wiegen, auf Rack-Einheiten ablegen.

>50 kg

Notice n° 23

ATTENTION:

Ne posez pas d'objet dont le poids dépasse 50 kg sur les unités montées en armoire.

>50 kg

Varningsmeddelande 23

VARNING:

Placera inte något föremål som väger mer än 50 kg ovanpå rackmonterade enheter.

>50 kg

Merknad 23

ADVARSEL:

Ikke sett gjenstander som veier mer enn 50 kg oppå enheter som er montert i et kabinett.

>50 kg

Avviso 23

ATTENZIONE:

Non poggiare oggetti che pesano più di 50 kg sulla parte superiore delle unità montate in rack.

>50 kg

Turvaohje 23

Varoitus:

Telineeseen asennettujen laitteiden päälle ei saa asettaa yli 50 kilon painoista esinettä.

>50 kg

Voorschrift 23

WAARSCHUWING:

Plaats geen objecten die meer dan 50 kg wegen op apparaten die in het rek zijn gemonteerd.

>50 kg

Forskrift 23

Pas på!:

Anbring ikke genstande, der vejer mere end 50 kg, oven på enheder, der er monteret i rack.

>50 kg

Instrução 23

CUIDADO:

Não coloque nenhum objeto com peso superior a 50 kg (110 lbs.) sobre dispositivos montados em rack.

>50 kg (110 lbs)

عبارة ٢٣

تنبيه :

لا تضع أي عنصر يزن أكثر من ٥٠ كيلوجرام (١١٠ رطل) أعلى سطح الأجهزة.

أكبر من ٥٠ كيلوجرام (١١٠ رطل)

• Izjava br. 23

OPREZ:

Ne postavljajte predmete teže od 50 kg (110 funti) na ormar u koji su ugrađeni uređaji.

>50 kg (110 lbs)

Δήλωση 23

ΠΡΟΣΟΧΗ:

Μην τοποθετείτε οποιοδήποτε αντικείμενο με βάρος μεγαλύτερο από 50 kg επάνω σε συσκευές που έχουν προσαρμοσθεί σε ικρίωμα (rack).

> 50 kg

הודעה 23

זהירות:
אל תניחו שם חפץ שמשקלו יותר מ-50 ק"ג על גבי התקנים המורכבים על
חסדי מרזירית.

50 ק"ג

• 23. ismertető

FIGYELEM:

Keretszerelésű eszközök tetejére ne helyezzen olyan tárgyat, melynek
súlya több, mint 50 kg (110 lbs.).

> 50 kg (110 lbs)

• 記述 23

 **注意**

ラック・モデルのサーバーの上に 50 Kg 以上の物を置かないで
ください。

> 50 Kg

경고문 23

주의:

서랍형 모델의 장치 상단에 50 kg(110 lbs.)이 넘는 물체를 올려 놓지 마십시오.

> 50 kg (110 lbs)

Instrukcja 23

ZAGROŻENIE:

Nie należy umieszczać przedmiotów cięższych niż 50 kg (110 funtów.)

> 50 kg (110 funtów)

· Положение 23

ОСТОРОЖНО:

Не ставьте предметы весом более 50 кг на верхнюю крышку устройств, смонтированных на выдвижных полках.

> 50 кг

声明 23

警告:

机柜安装的设备上面不能放置重于 50kg (110 磅) 的物品。

> 50 kg (110 磅)

· Príkaz 23

VÝSTRAHA:

Neumiestňujte žiadny predmet vážiaci viac ako 50 kg (110 lbs.) na vrch zariadenia montovaného do stojana.

> 50 kg (110 lbs)

· Navedba 23

SVARILO:

Ne postavljajte nobenega predmeta, ki je težji od 50 kg, na vrh naprav, montiranih v stojala.

> 50 kg (110 lbs)

聲明 23

注意：

請勿將任何重量超過 50 公斤 (110 磅) 的物品置於已安裝機架的裝置上方。

>50 公斤 (110 磅)

Instrukce 23

POZOR:

Neumíst'ujte nic s hmotností vyšší než 50 kg navrch zařízení namontovaných do stojanu.

>50 kg (110 lbs)

▪ Инструкција 23

ПРЕДУПРЕДУВАЊЕ:

Не поставувајте предмети потешки од 50 кг. (110 lbs.) над уредите кои се монтирани во ормари.

>50 kg (110 lbs)

Instrução 23

Instrução 23
CUIDADO:

Não coloque nenhum objeto com peso superior a 50 kg (110 lbs.) sobre dispositivos montados em rack.

>50 kg (110 lbs)

Chapter 1. Introduction

This *Installation Guide* contains instructions for setting up your IBM® IntelliStation® M Pro Type 6219 computer and basic instructions for installing some options. More detailed instructions for installing options are in the *User's Guide* on the IBM *IntelliStation Documentation* CD, which comes with your computer. This publication contains information about:

- Setting up and cabling your computer
- Starting and configuring your computer
- Setting up your operating system

Packaged with this *Installation Guide* is the *Device Drivers and IBM Enhanced Diagnostics* CD, which contains device drivers and hardware-specific support software.

The IBM *IntelliStation Documentation* CD is also included. This CD provides detailed information about your computer (see “About your documentation CD” on page 2 for more detailed information).

If you have access to the World Wide Web, you can obtain up-to-date information about your IntelliStation M Pro model and other IBM products at <http://www.ibm.com/intellistation/> on the World Wide Web.

The computer model and serial numbers are on labels on the bottom of the computer and on the lower-right side of the bezel. You will need these numbers to register your computer with IBM.

Note: Your computer keys cannot be duplicated by locksmiths. If you lose them, order replacement keys from the key manufacturer. The key serial number and the telephone number of the manufacturer are on a tag attached to the keys.

If you plan to install your computer in a rack, you need to purchase a *Tower-to-Rack Conversion Kit*. For a list of supported options for your computer, go to <http://www.ibm.com/pc/> on the World Wide Web; then, select your country and navigate to the list of options for your computer.

Your computer comes with Microsoft® Windows® XP preinstalled.

To install another operating system, follow the instructions in the documentation provided with the operating system and any updates. Then, follow the instructions in the readme file on the *Device Drivers and IBM Enhanced Diagnostics* CD to install the support software.

Note: If you install another operating system, you might need additional software or device drivers. Some preinstalled device drivers are available on the *Device Drivers and IBM Enhanced Diagnostics* CD. If you experience problems with the device drivers installed from this CD, you can obtain the latest device drivers at <http://www.ibm.com/pc/support/> on the World Wide Web.

Before installing any operating system, be sure you obtain the latest updates. Contact the operating system manufacturer or, if applicable, check the manufacturer's World Wide Web site to obtain the updates.

Additional information about operating systems is posted periodically at <http://www.ibm.com/pc/support/> on the World Wide Web.

The latest version of this publication is available from the IBM Web site. Go to <http://www.ibm.com> and click **Support & downloads**. In the **Technical support** keyword search field, type 6219 and click **Go**. A list of publications for your system is displayed.

About your documentation CD

Your IBM computer comes with a documentation CD, which contains documentation for your system in Portable Document Format (PDF) and includes the IBM Documentation Browser to help you find information quickly.

System requirements

To run the documentation CD, your system must have the following minimum hardware and software:

- Microsoft Windows NT[®] 4.0 (with Service Pack 3 or later), Windows 98, or Windows 2000.
- 100 MHz Intel Pentium[®] microprocessor.
- 32 MB RAM.
- Adobe Acrobat Reader 3.0 or later. Adobe Acrobat Reader software is included on the documentation CD, and you can install it when you run the IBM Documentation Browser.

Starting the IBM Documentation Browser

Use one of the following procedures to start the Documentation Browser:

- If Autostart is enabled, insert the documentation CD into your CD-ROM drive. The Documentation Browser will start automatically.
- If Autostart is disabled, insert the documentation CD into your CD-ROM drive; then, click **Start --> Run**. In the **Open** field, type:

```
e:\win32.bat
```

where e is the drive letter of your CD-ROM drive, and click **OK**.

Using the IBM Documentation Browser

Use the IBM Documentation Browser to browse the contents of the documentation CD, select from a list of available topics, see brief descriptions of the selected topics, and view selected topics using Adobe Acrobat Reader. The Documentation Browser automatically detects the regional settings in use on your system and presents the information in the language for that region (if available). If a topic is not available in the language for that region, the English version is displayed.

Click **Help** for detailed information about using the IBM Documentation Browser.

Complete the following steps to use the Documentation Browser:

1. Select your product from the **Product** drop-down list.
The **Topics** list appears. It lists all topics that pertain to the selected product. Topics are in folders or under other topics. A plus sign (+) appears beside each folder or topic that has additional topics under it. Click the plus sign to display the additional topics.
2. Click a topic to select it.

When you select a topic, a description of the topic contents appears in the **Description** field.

Note: To select multiple topics, press and hold down the Ctrl key while selecting your topics.

3. View selected topics.

Click **View Book**. Adobe Acrobat Reader starts, and the selected topics are displayed.

Using the search feature

Complete the following steps to use the Documentation Browser search feature:

1. Type a key word in the **Search** field.
2. Click **Search**. The topics containing the search word are listed in order based on the number of occurrences.
3. Click a file to open it.
4. Press Ctrl+F and use the Adobe Acrobat search function to search within the file.

Notices and statements used in this book

The caution and danger statements used in this book also appear in the multilingual *Safety Information* book that you can view through Access IBM and on the IBM *IntelliStation Documentation* CD. Each statement is numbered for reference to the corresponding statement in the *Safety Information* book.

The notice and statement definitions are:

- **Notes:** These notices provide important tips, guidance, or advice.
- **Important:** These notices provide information that might help you avoid inconvenient or problem situations.
- **Attention:** These notices indicate possible damage to programs, devices, or data. An attention notice is placed just before the instruction or situation in which damage could occur.
- **Caution:** These statements indicate situations that can be potentially hazardous to you. A caution statement is placed just before the description of a potentially hazardous procedure step or situation.
- **Danger:** These statements indicate situations that can be potentially lethal or extremely hazardous to you. A danger statement is placed just before the description of a potentially lethal or extremely hazardous procedure step or situation.

Related publications

The following documentation contains additional information about your computer. Because your computer comes with IBM-preinstalled software, you might be able to view some of these documents in Access IBM. See “Using Access IBM” on page 35. The following IBM documents can also be found at <http://www.ibm.com> on the World Wide Web.

- *User's Guide*

This publication contains detailed information about your computer and how to use and configure the functions of the computer.

- *Hardware Maintenance Manual*

This publication contains information for trained service technicians. It can be found at <http://www.ibm.com/pc/support/> on the World Wide Web.

- *Adaptec SCSI documentation*

This publication, included on the *Device Drivers and IBM Enhanced Diagnostics* CD, contains information and instructions for installing and configuring small computer system interface (SCSI) device drivers and devices.

- Readme files on the *Device Drivers and IBM Enhanced Diagnostics* CD

Several readme files on the CD contain diagnostic tools and preinstalled device drivers. Other readme files on the CD contain information about the various adapters and devices that might be installed in or attached to your computer.

- *Safety Information*

This publication, accessible through Access IBM, contains multilingual caution and danger statements.

Inventory checklist

Take an inventory of items as you unpack them to ensure that you have all of the components. If any items are missing or damaged, contact your place of purchase. The following items come with your IBM IntelliStation M Pro computer:

- One keyboard
- One mouse
- One power cord (9-ft line cord)
- One *Device Drivers and IBM Enhanced Diagnostics* CD
- One IBM *IntelliStation Documentation* CD
- This *Installation Guide*

If you are missing an item, contact your place of purchase.

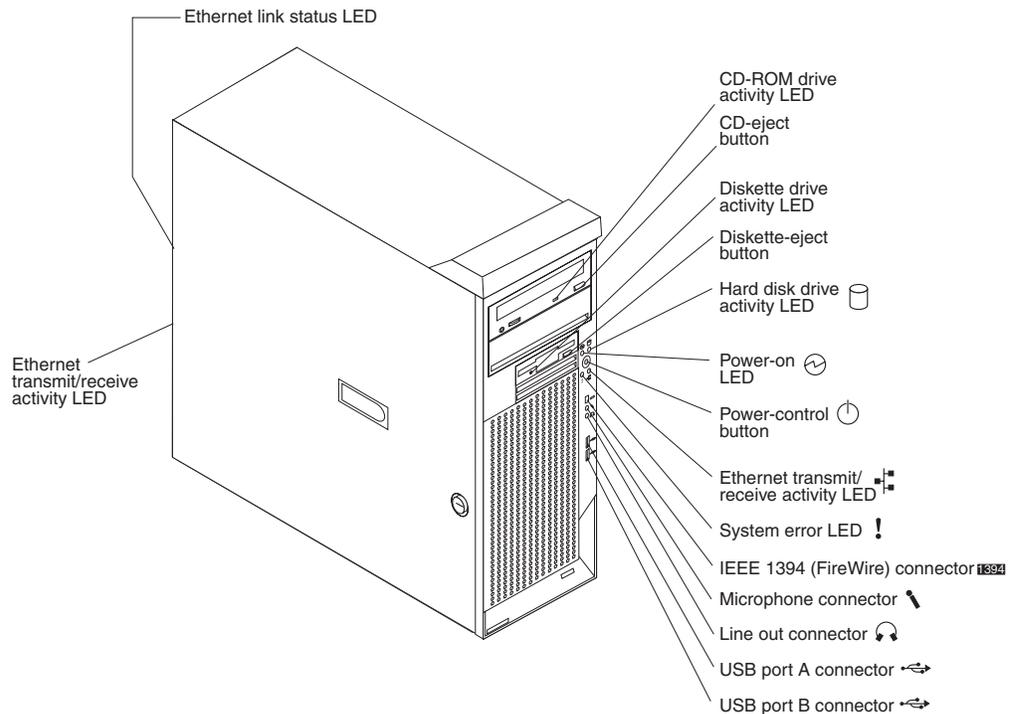

Features and specifications

The following table provides a summary of the features and specifications of your IntelliStation M Pro Type 6219 computer. Some features and specifications are not available on all models.

Table 1. Features and specifications

| | | |
|--|--|---|

|--|--|---|

Controls and indicators

CD-ROM drive activity LED

When this LED is lit, it indicates that the CD-ROM drive is in use.

CD-eject button

Press this button to release a CD from the CD-ROM drive.

Diskette drive activity LED

When this LED is lit, it indicates that the diskette drive is in use.

Diskette-eject button

Press this button to release a diskette from the diskette drive.

Hard disk drive activity LED

When this LED is flashing, it indicates that the hard disk drive is in use.

Power-on LED

When this LED is lit and is not flashing, it indicates that the computer is turned on. When this LED is flashing, it indicates that the computer is off and still connected to an ac power source (standby mode).

Power-control button

Press this button to turn the computer on or off.

Ethernet transmit/receive activity LED

When this LED is lit, it indicates that there is activity between the computer and the network. There are two of these LEDs, one on the front and one on the rear of the computer.

System-error LED

When this amber LED is lit, it indicates that a system error has occurred. An LED on the system board might also be lit to help isolate the error. Detailed troubleshooting information is in the *User's Guide* on the IBM *IntelliStation Documentation* CD. See "System-board error LEDs" on page 48 for additional information.

Ethernet link status LED

When this LED is lit, it indicates that there is an active connection on the Ethernet port. This LED is located on the rear of the computer.

IEEE 1394 (FireWire) ports

Use these ports (four-pin on front and six-pin in rear) to connect FireWire devices, such as digital video cameras and external hard disk drives.

Note: Some models are shipped with the IEEE 1394 (FireWire) adapter installed. If your computer did not come with this adapter installed, do not install any adapter in the mini-PCI slot. It is not supported.

Mic connector (pink)

Use this connector to connect a microphone to your computer when you want to record voices or other sounds on the hard disk drive. You can also use this connector (and a microphone) with speech recognition software.

Line out connector (green)

Use this connector to send audio signals from the computer to external devices, such as speakers with built-in amplifiers, headphones, multimedia keyboards, or the audio Line in jack on a stereo system.

USB ports

Use these automatically configured ports to connect USB v2.0 devices to your computer, using Plug and Play technology.

Chapter 2. Installing the hardware

This chapter provides instructions for installing or replacing options in your computer. For a list of supported options for your computer, go to <http://www.ibm.com/pc/> on the World Wide Web; then, select your country and navigate to the list of options for your computer. For more detailed installation information, see the *User's Guide* on the IBM *IntelliStation Documentation CD*.

Selecting a location for your computer

Ensure that you have an adequate number of properly grounded electrical outlets for the computer, monitor, and any other devices. Select a location for the computer where it will remain dry. Leave approximately 50 mm (2 in.) of space around the computer for proper air circulation. For information about arranging your computer and ease-of-use, see the following sections.

Arranging your workspace

To get the most from your computer, arrange both the equipment you use and your work area to suit your needs and the kind of work you do. Your comfort is of foremost importance, but light sources, air circulation, and the location of electrical outlets can also affect the way you arrange your workspace.

Comfort

The following guidelines will help you decide what working position suits you best.

Choose a comfortable chair to reduce fatigue from sitting in the same position for long periods. The backrest and seat should adjust independently and provide good support. The seat should have a curved front to relieve pressure on the thighs. Adjust the seat so that your thighs are parallel to the floor and your feet are either flat on the floor, or on a footrest.

When using the keyboard, keep your forearms parallel to the floor and your wrists in a neutral, comfortable position. Try to keep a light touch on the keyboard, and your hands and fingers relaxed. Change the angle of the keyboard for maximum comfort by adjusting the position of the keyboard feet.

Adjust the monitor so that the top of the screen is at, or slightly below, eye level. Place the monitor at a comfortable viewing distance, usually 51 to 61 cm (20 to 24 in.), and position it so that you can view it without having to twist your body.

Glare and lighting

Position the monitor to minimize glare and reflections from overhead lights, windows, and other light sources. Place the monitor at right angles to light sources whenever possible. Reduce overhead lighting, if necessary, by turning off lights or using lower wattage bulbs. If you install the monitor near a window, use curtains or blinds to block the sunlight. You might have to adjust the Brightness and Contrast controls on the monitor as the lighting changes throughout the day.

Where it is impossible to avoid reflections or to adjust the lighting, place an antiglare filter over the screen. However, these filters might affect the clarity of the screen image; try them only after you have exhausted other methods of reducing glare.

Dust compounds problems associated with glare. Clean your monitor screen periodically using a soft cloth moistened with a nonabrasive, liquid glass cleaner.

Air circulation

Your computer and monitor produce heat. The computer fan pulls in fresh air and forces out hot air. The monitor lets hot air escape through vents. Blocking the air vents can cause overheating, possibly resulting in malfunction or damage. Place the computer and monitor so that nothing blocks the air vents; usually 50 mm (2 in.) of air space is sufficient. Also, make sure the vented air is not blowing on someone else.

Electrical outlets and cable lengths

The location of electrical outlets and the length of device power cords and cables might determine the final placement of your computer.

When arranging your work space:

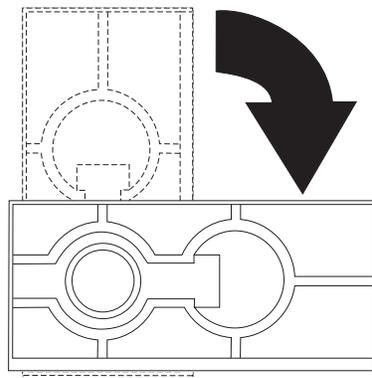

- Avoid the use of extension cords. Whenever possible, plug the computer power cord directly into an electrical outlet.
- Keep power cords and cables neatly routed away from walkways and other areas where they might be accidentally dislodged.

For more information about power cords, see “Power cords” on page 68.

Moving the stabilizing feet

The two front feet on the bottom of the computer rotate 90 degrees to provide additional stability when the computer is in an upright position.

Attention: When you need to access the inside of the computer to install options, you might find it easier to lay the computer on its side. If you do so, ensure that the feet are turned inward toward the computer to avoid breaking the feet.

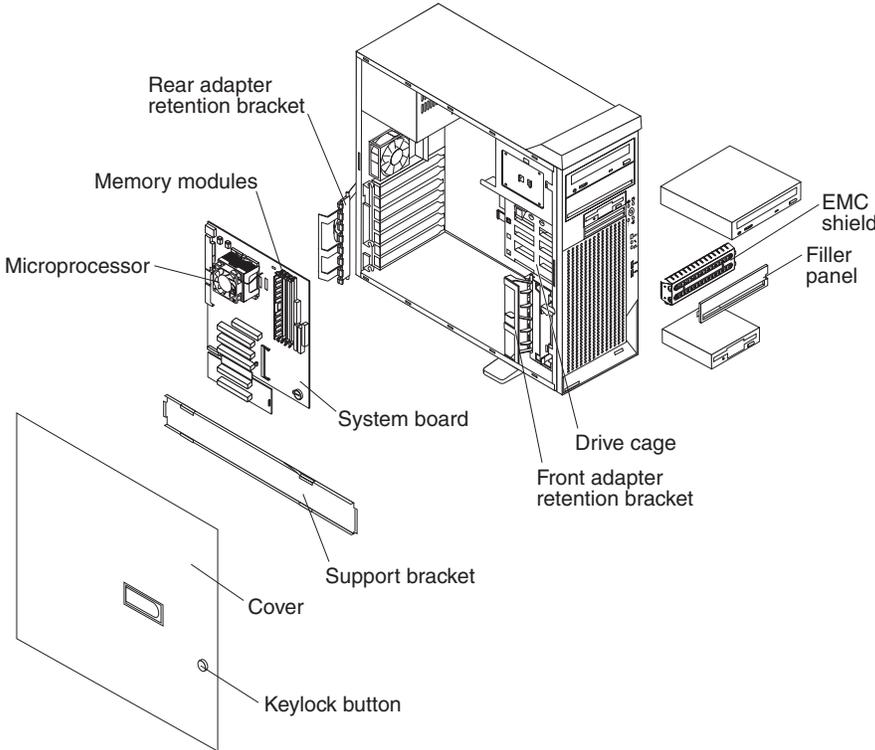

Installing options

This section contains basic instructions for installing hardware options in your IntelliStation M Pro computer. These instructions are intended for users who are experienced with setting up IBM computer hardware. If you need more detailed instructions, see the *User's Guide* on the IBM *IntelliStation Documentation CD*.

If you have no options to install, continue with “Cabling the computer” on page 30.

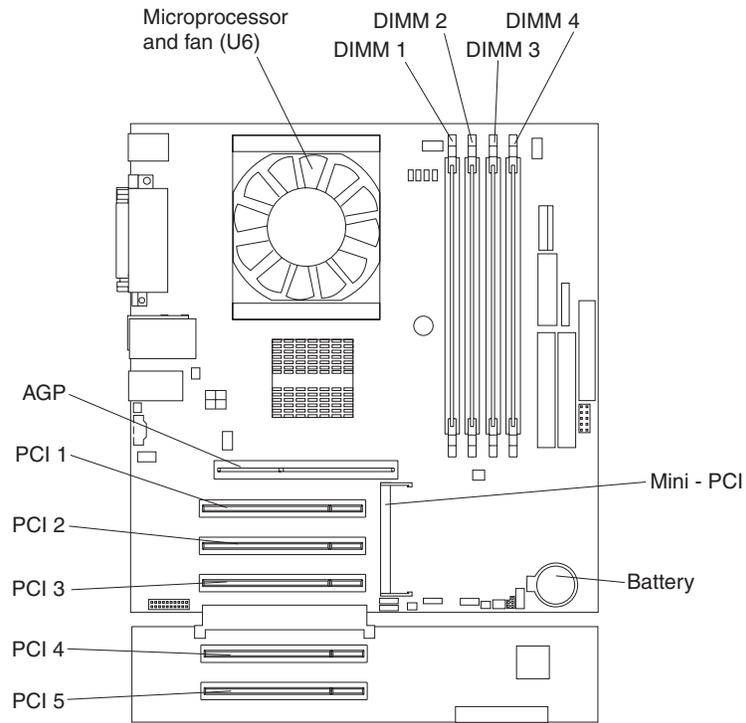

Major components of your computer

The following illustration shows the major components in the computer.

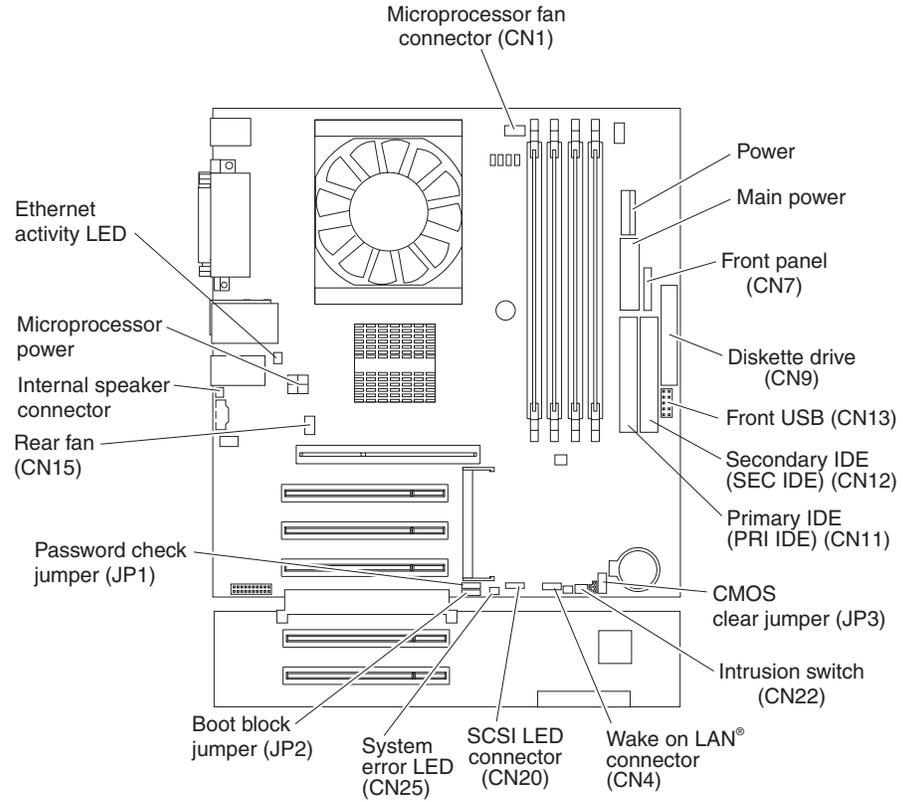

System-board option connectors

The following illustration shows the system-board connectors for user-installable options.

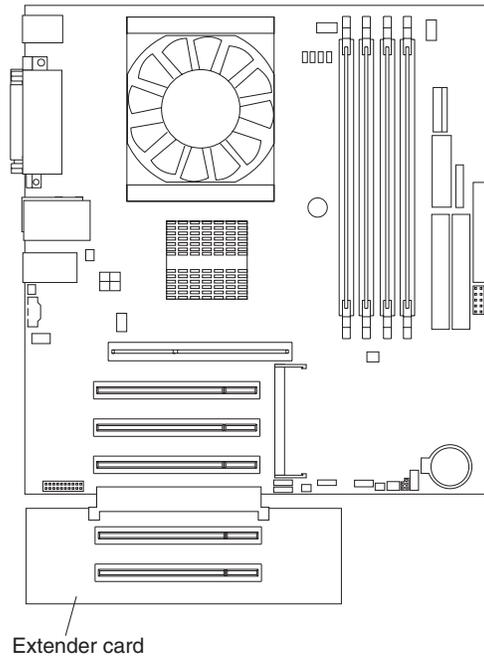

System-board internal connectors

The following illustration shows the internal connectors on the system board.

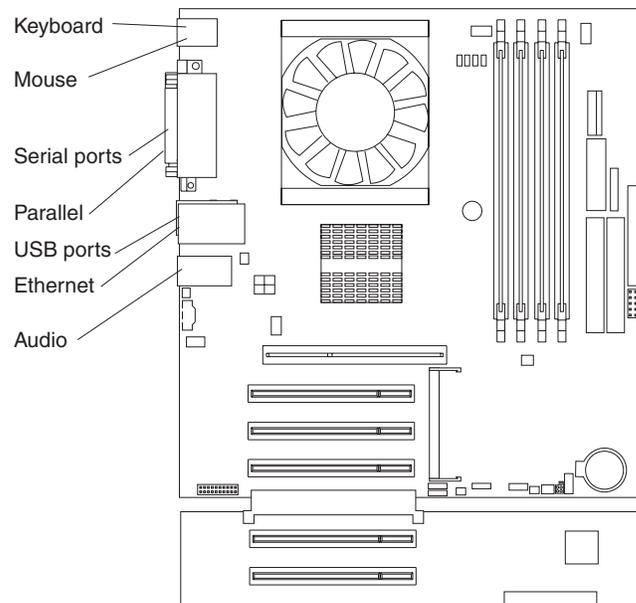

The IDE models have a shorter extender card, as shown in the following illustration.

System-board external connectors

The following illustration shows the input/output port connectors on the system board.

Installation guidelines

Before you begin installing options in your computer, read the following information:

- Review the safety information beginning on page v and the guidelines in “Handling static-sensitive devices” on page 16. This information will help keep you safe while working with your computer and options.
- Ensure that you have an adequate number of properly grounded electrical outlets for your computer, monitor, and other devices that you will connect to the computer.
- Back up all important data before you make changes to disk drives.
- Have a small flat-blade screwdriver available.
- When you need to access the inside of the computer to install options, you might find it easier to lay the computer on its side. Before laying the computer on its side, rotate the two front stabilizing feet a quarter turn inward toward the computer, so that they do not break. Before returning the computer to an upright position, rotate the front-stabilizing feet a quarter turn outward from the computer. See “Moving the stabilizing feet” on page 10 for more information.
- The blue color on components and labels identifies touch points, where you can grip a component, move a latch, and so on.
- For a list of supported options for your computer, go to <http://www.ibm.com/pc/> on the World Wide Web; then, select your country and navigate to the list of options for your computer.

System reliability considerations

To help ensure proper system cooling and system reliability, ensure that:

- Each of the drive bays has a drive or a filler panel and electromagnetic compatibility (EMC) shield installed.

- There is adequate space around the computer to allow the computer cooling system to work properly. Leave approximately 50 mm (2 in.) of open space around the front and rear of the computer. Do not place objects in front of the fans. For proper cooling and airflow, replace the computer cover before turning on the computer. Operating the computer for extended periods of time (over 30 minutes) with the computer cover removed might damage computer components.
- You have followed the cabling instructions that come with optional adapters.
- You have replaced a failed fan as soon as possible.

Handling static-sensitive devices

Attention: Static electricity can damage electronic devices and your system. To avoid damage, keep static-sensitive devices in their static-protective packages until you are ready to install them.

To reduce the possibility of damage from electrostatic discharge, observe the following precautions:

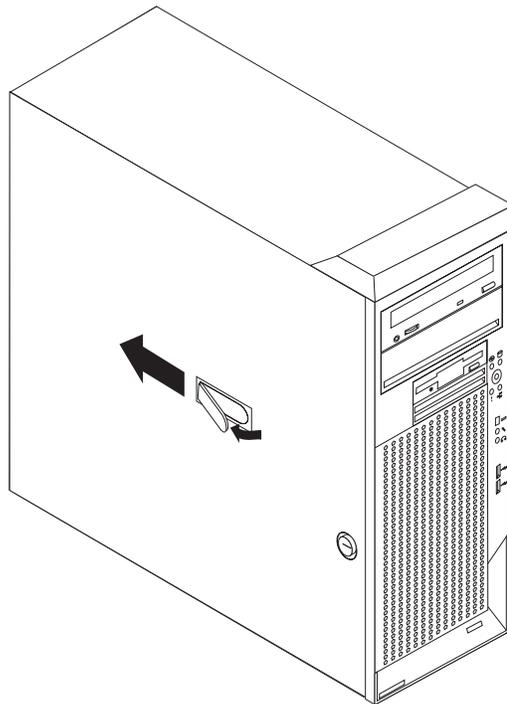

- Limit your movement. Movement can cause static electricity to build up around you.
- Handle the device carefully, holding it by its edges or its frame.
- Do not touch solder joints, pins, or exposed printed circuitry.
- Do not leave the device where others can handle and damage it.
- While the device is still in its static-protective package, touch it to an unpainted metal part of the system unit for at least 2 seconds. This drains static electricity from the package and from your body.
- Remove the device from its package and install it directly into the computer without setting down the device. If it is necessary to set down the device, put it back into its static-protective package. Do not place the device on your computer cover or on a metal surface.
- Take additional care when handling devices during cold weather. Heating reduces indoor humidity and increases static electricity.

Removing the side cover

To remove the side cover, you might find it easier to lay the computer on its side. If you do, move the stabilizing feet so that they do not break (see “Moving the stabilizing feet” on page 10).

Complete the following steps to remove the side cover of the computer:

1. Review the “Installation guidelines” on page 15.
2. Turn off the computer and all attached devices (see “Turning off the computer” on page 32); then, disconnect all power cords and external cables.
3. Pull the cover-release latch away from the computer, and push the side cover toward the rear of the computer. Lift the side cover off the computer and set it aside.

To replace the side cover, see “Replacing the side cover” on page 30.

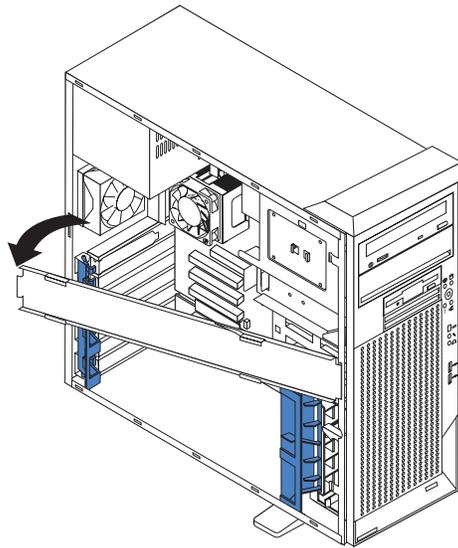

Attention: For proper cooling and airflow, replace the side cover before turning on the computer. Operating the computer with the cover removed might damage computer components.

Removing and installing the support bracket

When working with some options, such as hard disk drives and memory modules, you must first remove the support bracket to access the option.

Complete the following steps to remove the support bracket:

1. Review the “Installation guidelines” on page 15.
2. Turn off the computer and all attached devices (see “Turning off the computer” on page 32); then, disconnect all power cords and external cables.
3. Remove the side cover (see “Removing the side cover” on page 17).
4. Pull out on the rear end of the support bracket approximately 150 mm (6 in.).
5. Disengage the front end of the support bracket from the computer and set the bracket aside.

6. Continue with the option installation or removal procedure.

To reinstall the support bracket, reverse the previous steps.

Working with adapters

Your computer comes with adapter connectors or slots. The Accelerated Graphics Port (AGP) video adapter is installed in the AGP slot and some models have a IEEE 1394 (FireWire) controller adapter installed in the mini-PCI slot. You can install up to five additional optional adapters in your computer in PCI slots 1 through 5.

See “System-board option connectors” on page 12 for the location of expansion slots on the system board.

Adapter considerations

Before you install an adapter, review the following information:

- Read the documentation that comes with your operating system.
- Locate the documentation that comes with the adapter and follow those instructions in addition to the instructions in this chapter. If you need to change the switch or jumper settings on your adapter, follow the instructions that come with the adapter.
- You can install only 32-bit adapters in PCI slots 1 through 5.

- You can install full-length adapters in all five expansion slots. None of the expansion slots are hot-plug slots.
- Your computer supports 5.0 V signaling and universal PCI adapters; it does not support 3.3 V signaling adapters.
- Your computer uses a rotational interrupt technique to configure PCI adapters. Because of this technique, you can install a variety of PCI adapters that currently do not support sharing of PCI interrupts.
- The system scans the AGP slot, mini-PCI slot, and PCI expansion slots 1 through 5 to assign system resources. Then, the system starts the PCI devices in the following order, if you have not changed the default startup sequence: AGP slot, mini-PCI slot, PCI expansion slot 1, system-board integrated drive electronics (IDE) or small computer system interface (SCSI) devices, and then PCI slots 2 through 5.
- Some models come with a IEEE 1394 (FireWire) adapter installed in the mini-PCI slot. If your computer did not come with a IEEE 1394 (FireWire) adapter installed, do not install any adapter in the mini-PCI slot.
- For a list of supported options for your computer, go to <http://www.ibm.com/pc/> on the World Wide Web; then, select your country and navigate to the list of options for your computer.

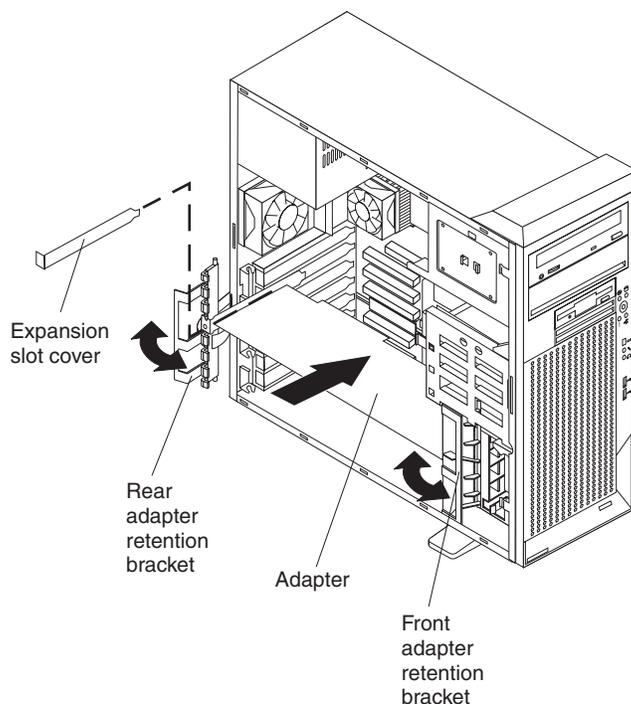

Installing an adapter

Complete the following steps to install an adapter in your computer:

1. Review the “Installation guidelines” on page 15 and “Handling static-sensitive devices” on page 16.
2. Turn off the computer and all attached devices (see “Turning off the computer” on page 32); then, disconnect all power cords and external cables.
3. Remove the side cover. See “Removing the side cover” on page 17.
4. Determine which PCI slot you will use for the adapter. Review the instructions that come with the adapter for any requirements, restrictions, or cabling instructions. It might be easier to route any cables before you install the adapter.
5. For full-length adapters, rotate the rear adapter-retention bracket to the open (unlocked) position and remove it from the computer. Rotate the front adapter-retention bracket to the open position. If you are installing a smaller adapter, remove only the rear adapter-retention bracket.
6. Remove the expansion-slot cover. From the rear of the computer, press on the slot cover. Grasp it and pull it out of the expansion slot. Store it in a safe place for future use.

Note: Expansion-slot covers must be installed on all empty slots. This maintains the electronic emissions standards of the computer and ensures proper ventilation of computer components.

7. Set any jumpers or switches on the adapter or system board according to the documentation that comes with the adapter.
8. Remove the adapter from the static-protective package, carefully grasp the adapter by the top edge or upper corners, and align it with the expansion slot guides; then, press the adapter *firmly* into the expansion slot. Move the adapter directly from the static-protective package to the adapter slot. Avoid touching the components and gold-edge connectors on the adapter. Ensure that the adapter is correctly seated in the expansion slot before you turn on the computer. Incomplete installation of an adapter might damage the system board or the adapter.

9. Connect required cables to the adapter. Route cables so that they do not block the flow of air from the fans. If you are installing an optional SCSI adapter, see “Cabling an optional SCSI adapter” for additional information.
10. If you have another adapter to install, repeat steps 1 through 9.
11. If you have installed a full-length adapter, rotate the front adapter-support bracket to the closed (locked) position.

Note: If any adapter in your computer is large or has heavy cables attached to it, you can secure the adapter with a screw: insert one backup expansion-slot screw (stored next to slot 1) through the top of each adapter bracket into the screw hole and secure the adapter before proceeding to the next step.

12. Reinstall the rear adapter-retention bracket; then, rotate the bracket to the closed (locked) position.

Note: The rear retention bracket rests against the computer side cover. You might find it easier to lay the computer on its side to replace the side cover.

13. If you have other options to install, do so now; otherwise, replace the side cover (see “Replacing the side cover” on page 30), reconnect the external cables and power cords, and turn on the computer. Then, go to “Completing the installation” on page 29.

Cabling an optional SCSI adapter

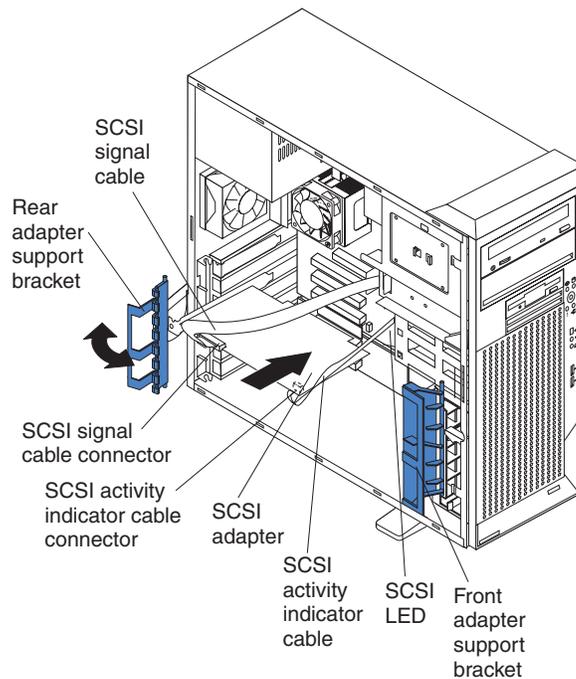

You can install an optional SCSI adapter in your computer to control the internal hard disk drives. With a SCSI adapter installed, you can configure the internal hard disk drives into disk arrays. You can also cable a SCSI adapter to external hard disk drives. See your SCSI adapter option documentation for complete instructions for installing a SCSI adapter in your computer and for additional information about SCSI adapters.

Notes:

1. An optional SCSI adapter is required to connect external SCSI devices.
2. The SCSI cables used by the integrated SCSI controller cannot be used with an optional SCSI adapter.

Complete the following steps to cable an optional SCSI adapter:

1. Install the SCSI adapter (see “Installing an adapter” on page 19).
2. Connect the SCSI-signal cable to the adapter and one or more of the signal cable connectors to the rear of the SCSI devices.
3. Connect the SCSI-activity-indicator cable to the adapter and to the SCSI-LED connector on the system board. See “System-board internal connectors” on page 13 for the location of the SCSI-LED connector.

4. Complete the installation of the optional SCSI adapter.

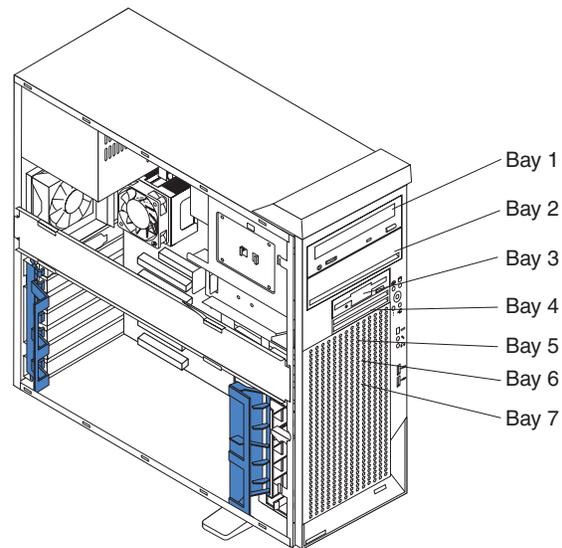

Installing internal drives

Depending on your computer model, you might have one or more of the following drives installed:

- Diskette
- Hard disk
- CD-ROM, CD-RW, or DVD/CD-RW combo

Internal drive bays

Your IntelliStation M Pro comes with an IDE CD-ROM, CD-RW, or DVD/CD-RW drive in bay 1, a 3.5-in., 1.44 MB diskette drive in bay 3, and a hard disk drive in bay 7.

Notes:

1. Diskette drives, tape drives, CD-ROM, DVD/CD-RW, and DVD-ROM drives are examples of removable-media drives. You can install removable-media drives in bays 1, 2, 3, and 4 only.
2. You can install a 3.5-in. slim-high, or a 5.25-in. half-high removable-media drive, such as a tape backup drive, in bay 2.
3. You can install only a 3.5-in., slim-high, removable-media drive in bay 4.
4. The IntelliStation M Pro computer supports only one diskette drive.
5. To install a 3.5-in. drive in a 5.25-in. bay, you must use the 5.25-in. conversion kit, supplied with the option.
6. The electromagnetic interference (EMI) integrity and cooling of the computer are protected by having all bays and PCI slots covered or occupied. When you install a drive or PCI adapter, save the EMC shield and filler panel from the bay or the PCI adapter slot cover in the event you later remove the option.
7. For a complete list of supported options for your computer, go to <http://www.ibm.com/pc/> on the World Wide Web; then, select your country and navigate to the list of options for your computer.

Preinstallation steps

Some of these steps are required only the first time you install a hard disk drive in a specific bay.

1. Review the safety information beginning on page v, “Installation guidelines” on page 15, and the documentation that comes with your drive.
2. Verify that you have all the cables and other equipment specified in the documentation that comes with the drive.
3. Choose the bay in which you want to install the drive.
4. Check the instructions that come with the drive to see if you need to set any switches or jumpers on the drive. If you are installing a SCSI device, be sure to set the SCSI ID for that device.

Installing a drive in bay 2 or 4

Complete the following steps to install a drive in bay 2 or 4:

1. Follow the instructions in “Preinstallation steps”.
2. Turn off the computer and all attached devices (see “Turning off the computer” on page 32); then, disconnect all power cords and external cables.
3. Remove the side cover (see “Removing the side cover” on page 17).
4. Remove the support bracket (see “Removing and installing the support bracket” on page 18).
5. Use a screwdriver to pry the filler panel and EMC shield away from the computer.

Note: If you are installing a drive that contains a laser, review the following safety precaution.

Statement 3

CAUTION:

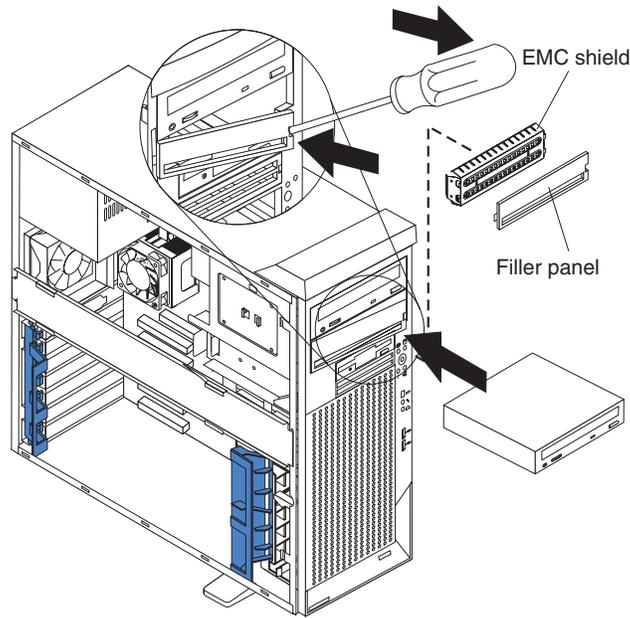

When laser products (such as CD-ROMs, DVD drives, fiber optic devices, or transmitters) are installed, note the following:

- Do not remove the covers. Removing the covers of the laser product could result in exposure to hazardous laser radiation. There are no serviceable parts inside the device.
- Use of controls or adjustments or performance of procedures other than those specified herein might result in hazardous radiation exposure.

Danger

Some laser products contain an embedded Class 3A or Class 3B laser diode. Note the following. Laser radiation when open. Do not stare into the beam, do not view directly with optical instruments, and avoid direct exposure to the beam.

6. Touch the static-protective package containing the drive to any unpainted metal surface on the computer; then, remove the drive from the bag and place it on a static-protective surface.
7. Set any jumpers or switches on the drive according to the documentation that comes with the drive.

Note: You might find it easier to install the new drive into the appropriate opening on the front, and then attach the cables.

8. If you are installing a 5.25-in. drive in bay 2, push the drive into the bay; then, use the two screws to attach the drive to the drive cage. If you are installing a 3.5-in. drive in bay 2, you must attach the 5.25-in. conversion kit that came with the option.
9. Determine whether the drive is an IDE or SCSI device; then, connect one end of the appropriate signal cable into the back of the drive and the other end of this cable into the appropriate IDE or SCSI connector on the system board. See "Power and signal cables for internal drives" on page 26 for additional information about cabling drives and "System-board internal connectors" on page 13 for the location of IDE and SCSI connectors on the system board. If there are open connectors on the cables connecting existing IDE or SCSI drives, these cables can be used to connect the new drive.
10. Route the signal cable so that it does not block the airflow to the rear of the drives or over the microprocessor.
11. Connect the power cable to the back of the drive. The connectors are keyed and can be inserted only one way.
12. If you have other options to install or remove, do so now; otherwise, replace the support bracket and then go to "Completing the installation" on page 29.

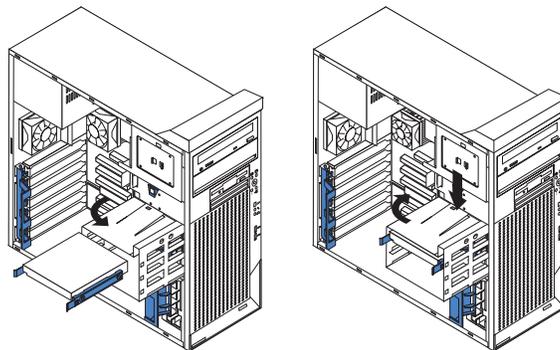

Installing a hard disk drive in bay 5, 6, or 7

Bays 5, 6, and 7 are in the drive cage. The drive cage is behind the front of the adapter-support bracket.

Note: When installing options, you might find it easier to work with the computer lying on its side.

Complete the following steps to install a drive in bay 5, 6, or 7:

1. Follow the instructions in “Preinstallation steps” on page 23.
2. Turn off the computer and all attached devices (see “Turning off the computer” on page 32); then, disconnect all power cords and external cables.
3. Remove the side cover (see “Removing the side cover” on page 17).
4. Remove the support bracket (see “Removing and installing the support bracket” on page 18).
5. If your computer has hard disk drives preinstalled in the drive cage, disconnect the power and signal cables from the rear of the drives.
6. Grasp the drive cage and rotate the cage out of the computer until it locks into place with the drive-cage retention tab. The open ends of the drive slots and installed drives will face you. Ensure that the drive cage locks into place over the drive-cage retention tab by rotating the drive cage all the way out of the computer.

7. Attach the blue guide rails to the side of the drive using the screws that are provided. If you obtained your optional drive from IBM, the guide rails are blue plastic.
8. Slide the drive into the drive cage until the plastic tabs on the drive guide rails lock into place in the drive cage. Clear any cables that might impede the replacement of the drive cage.
9. Determine whether the new drive is an IDE or SCSI device; then, connect one end of the appropriate signal cable into the back of the drive and the other end of this cable into the appropriate IDE or SCSI connector on the system board. See “Power and signal cables for internal drives” on page 26 for additional information about cabling drives and “System-board internal connectors” on page 13 for the location of IDE and SCSI connectors on the system board. If there are open connectors on the cables connecting existing IDE or SCSI drives, these cables can be used to connect the new drive.
10. Route the signal cable so that it does not block the airflow to the rear of the drives or over the microprocessor.
11. Connect the power cable to the back of the drive. The connectors are keyed and can be inserted only one way.
12. Push the drive cage outward, and press in on the drive-cage release tab; then, rotate the drive cage back into the computer.
13. If you have other options to install or remove, do so now; otherwise, replace the support bracket (see “Removing and installing the support bracket” on page 18) and then go to “Completing the installation” on page 29.

Power and signal cables for internal drives

Your computer uses cables to connect IDE and SCSI devices to the power supply and to the system board. (See “System-board internal connectors” on page 13 for the location of system-board connectors.) Review the following information before connecting power and signal cables to internal drives:

- The drives that are preinstalled in your computer come with power and signal cables attached. If you replace any drives, remember which cable is attached to which drive.
- When you install a drive, ensure that one of the drive connectors of the signal cable is connected to the drive and that the connector at the other end of the signal cable is connected to the system board.
- If you have only one IDE device on a cable, it must be set as a primary device.
- If two IDE devices are used on a single cable, one must be designated as the master device and the other as the subordinate device; otherwise, the computer might not recognize some of the IDE devices. The master (primary) and (subordinate (secondary) designation is determined by switch or jumper settings on each IDE device.
- If two IDE devices are on a single cable, and only one is a hard disk drive, the hard disk drive must be set as a master device.

The following cables are provided:

- **Power cables:** Four-wire power cables connect the drives to the power supply. At the end of these cables are plastic connectors that attach to different drives; these connectors vary in size.
- **Signal cables:** Signal cables are typically flat cables, also called ribbon cables, that connect IDE, SCSI, and diskette drives to the system board. Two or three types of signal cables come with your computer:
 - **IDE:** The wider IDE signal cable has three connectors.
If the cable has three connectors, one of these connectors is attached to the drive, one is a spare, and the third attaches to the master or subordinate IDE connector on the system board. The spare connector can be used to connect additional IDE drives to your computer.

Note: The CD-ROM drive is attached to an ATA 100 signal cable. ATA 100 signal cables are color-coded. The blue connector attaches to the system board. The black connector attaches to the master IDE device. The gray middle connector attaches to the subordinate IDE device. If you are installing an additional hard disk drive, you must change the switch or jumper setting on the CD-ROM drive to make the drive a subordinate device, set the switch or jumper setting on the new drive to master, and change the connector used for the CD-ROM drive to the gray middle connector. The new drive will connect to the black master IDE device connector.
 - **Diskette drive:** The narrower signal cable has two connectors, one attaches to the diskette drive, and the other attaches to the connector (FDD1) on the system board.
 - **SCSI:** The following cables can be used to attach SCSI devices to the integrated SCSI controller on the system board:
 - An Ultra320 twisted ribbon cable connects the internal Ultra320 SCSI hard disk drive to the SCSI connector on the system board. This cable has four additional connectors for attaching more internal SCSI devices.

- A round SCSI cable connects external SCSI devices to the integrated SCSI controller on the system board. For more information about connecting SCSI devices, see the SCSI documentation.

Installing memory modules

Adding memory to your computer is an easy way to make programs run faster. You can increase the amount of memory in your computer by installing memory modules. Your IntelliStation M Pro computer uses industry-standard PC2100 double-data-rate (DDR) dual inline memory modules (DIMMs).

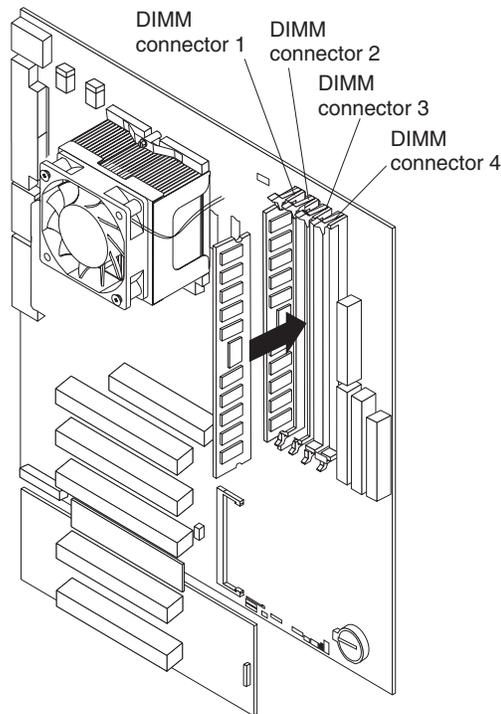

Notes:

1. The system board contains four DIMM connectors and supports two-way memory interleaving.
2. The DIMM options available for your computer are 128 MB, 256 MB, 512 MB, and 1 GB memory modules. Your computer supports a minimum of 256 MB and a maximum of 4 GB of system memory.
3. The amount of usable memory will be reduced depending on the system configuration. A certain amount of memory must be reserved for system resources. The BIOS will display the total amount of installed memory and the amount of configured memory.
4. Your computer comes with two 128 MB, 256 MB, or 512 MB DIMMs, (for a total of 256 MB, 512 MB, or 1024 MB memory) installed in the DIMM 1 and DIMM 2 memory connectors. When you install additional DIMMs, be sure to install them as a pair in DIMM connectors 3 and 4.
5. DIMMs must be installed in matched pairs. The first pair of DIMMs you install in DIMM 1 and DIMM 2 memory connectors must be the same size, speed, type, and technology. You can mix compatible DIMMs from various manufacturers. If you install a second pair of DIMMs in DIMM 3 and DIMM 4 memory connectors, they do not have to be the same size, speed, type, and technology as the DIMMs you installed in DIMM 1 and DIMM 2 memory connectors. However, the size, speed, type, and technology of the DIMMs you install in DIMM 3 and DIMM 4 memory connectors must match each other.
6. Install only 133 MHz (memory bus), 2.5 V, 184-pin, double-data-rate (DDR) 266, PC2100, unbuffered synchronous dynamic random-access memory (SDRAM) with error correcting code (ECC) DIMMs. These DIMMs must be compatible with the latest PC2100 SDRAM unbuffered DIMM specification. For a list of supported options for your computer, go to <http://www.ibm.com/pc/> on the World Wide Web; then, select your country and navigate to the list of options for your computer.

Complete the following steps to install a DIMM:

1. Review the safety information beginning on page v, "Installation guidelines" on page 15, and "Handling static-sensitive devices" on page 16.
2. Turn off the computer and all attached devices (see "Turning off the computer" on page 32); then, disconnect all power cords and external cables.
3. Remove the side cover (see "Removing the side cover" on page 17).
4. Remove the support bracket (see "Removing and installing the support bracket" on page 18).
5. You might find it easier to install memory modules if you rotate the drive cage out of the computer. Grasp the drive cage and rotate it until it locks into place.

6. Locate the DIMM connectors on the system board. Determine the connectors into which you will install the DIMMs. Remember that DIMM 1 and DIMM 2 must be paired together (and must be the first pair installed) and DIMM 3 and DIMM 4 must be paired together.
7. Open the retaining clips and, if necessary, remove any existing DIMM.
8. Touch the static-protective package containing the DIMM to any unpainted metal surface on the computer. Then, remove the new DIMM from the package.
9. Gently open the retaining clip on each end of the DIMM slot. Turn the DIMM so that the pins align correctly with the connector.
10. Insert the DIMM into the connector. Firmly press the DIMM straight down into the connector by applying pressure on both ends of the DIMM simultaneously. The retaining clips snap into the locked position when the DIMM is firmly seated in the connector. If a gap exists between the DIMM and the retaining clips, the DIMM has not been correctly installed. Open the retaining clips, remove the DIMM, then reinsert it.

11. If you have other options to install or remove, do so now. Otherwise, rotate the drive cage back into the computer and replace the support bracket (see “Removing and installing the support bracket” on page 18); then, go to “Completing the installation” on page 29.

Installing a security rope clip

To help prevent hardware theft, you can add a security rope clip and cable to your computer. After you add the security cable, make sure that it does not interfere with other cables that are connected to the computer.

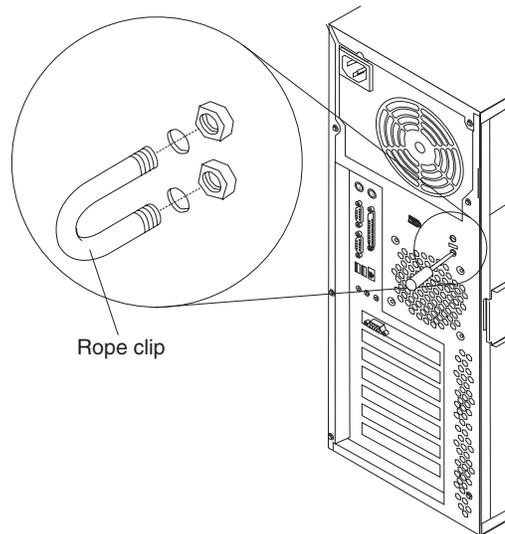

Before you begin, obtain the following items:

- A flat-blade screwdriver
- An adjustable wrench

- A 19 mm (0.75 in.) rope clip or wire rope (similar to National Manufacturing No. 3230, Stock No. 176-735)
- Threaded nuts that fit the rope clip
- A security cable
- A lock, such as a combination lock or padlock

Complete the following steps to install a rope clip:

1. Turn off the computer and all attached devices. Disconnect all external cables and power cords; then, remove the side cover. See “Removing the side cover” on page 17.
2. Use a screwdriver to remove the two metal knockouts.
3. Insert the rope clip through the rear panel; then, attach and tighten the nuts.
4. Thread the cable through the rope clip and around an object that is not part of or permanently secured to the building structure or foundation, and from which the cable cannot be removed. Fasten the cable ends together with a lock. After you add the security cable, be certain it does not interfere with other cables connected to the computer.

5. If you have other options to install or remove, do so now; otherwise, go to “Completing the installation”.

Completing the installation

To complete your installation, you must reinstall the bezel, reinstall the side cover, connect all the cables and, for certain options, run the Configuration/Setup Utility program. Follow the instructions in this section.

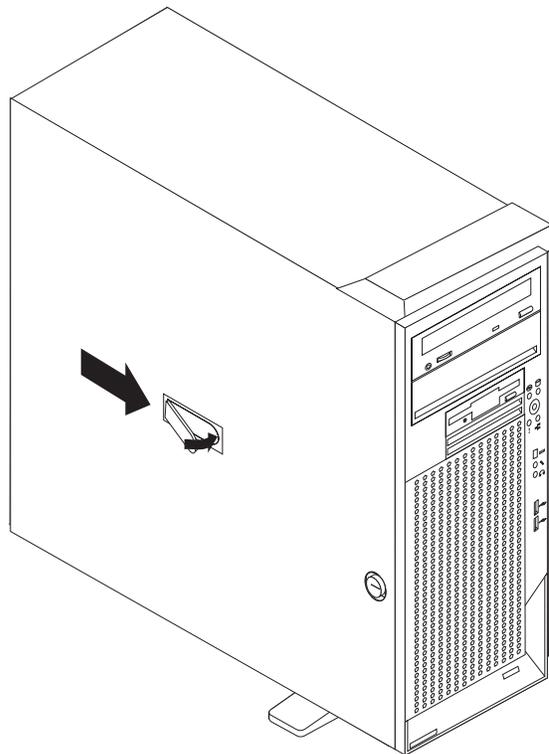

Replacing the side cover

If you removed the support bracket, reinstall it before you replace the side cover. See “Removing and installing the support bracket” on page 18.

Note: The rear adapter retaining bracket rests against the computer side cover. You might find it easier to lay the computer on its side to replace the side cover.

Complete the following steps to replace the side cover:

1. Before installing the cover, check that all cables, adapters, and other components are installed and seated correctly and that you have cleared all work tools from inside the computer.
2. Install the side cover by placing it into position on the computer. Be certain the tabs on the underside of the cover match up to the holes along the sides of the computer. Press down on the cover-release latch as you slide the side cover forward to lock the side cover.

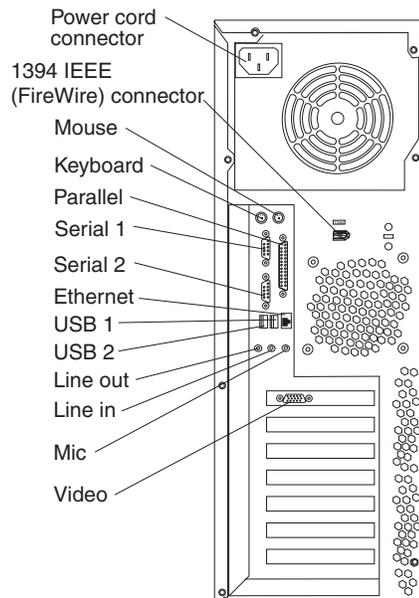

3. If you have not done so already, ensure that the two front stabilizing feet are rotated outward so that they properly support the computer. Rotate each individual foot outward 90 degrees (see “Moving the stabilizing feet” on page 10).

Cabling the computer

If your computer cables and connector panel have color-coded connections, match the color of the cable end with the color of the connector. For example, match a blue cable end with a blue panel connector, a red cable end with a red connector, and so on.

Attention: To prevent damage to equipment, connect the power cord last.

The following illustration shows the input/output (I/O) connectors on the rear of the computer.

Depending on the video adapter installed in your computer and the monitor you want to use, you might need to use special video cables that convert signals or provide an additional connection point for dual-monitor capability. See the *User's Guide* on the IBM *IntelliStation Documentation* CD and the documentation that comes with your monitor for additional information.

Turning on the computer

When the computer is connected to an ac power source but is not turned on, the operating system does not run, and all core logic is shut down; however, the computer can respond to requests, such as a remote request to turn on the computer. The power-on LED flashes to indicate that the computer is connected to an ac power source but is not turned on (standby mode).

Notes:

1. Turn on all external devices, such as the monitor, before turning on the computer.
2. The power-on LED on the front of the computer is lit when the computer is on and while it is being turned on.
3. You can install a circular disk over the power-control button to prevent the computer from being turned off accidentally. This disk, known as the power-control button shield, comes with your computer.

Approximately 20 seconds after the computer is connected to ac power, the power-control button becomes active, and you can turn on the computer and start the operating system by pressing the power-control button. The computer can also be turned on any of the following ways:

- If a power failure occurs while the computer is turned on, the computer will restart automatically when power is restored.
- When you plug in your computer for the first time, the Wake on LAN[®] feature can turn on the computer. If your computer was previously turned on, it must be properly turned off for the Wake on LAN feature to turn on the computer.

Running the operating system setup program

If you are starting your computer for the first time, the Microsoft Windows setup program runs automatically when you start the computer. The program will prompt you to make choices or type information. If you need more detailed information other than what is provided in this *Installation Guide*, see your Microsoft operating-system manual.

Important:

1. After turning on your computer for the first time, you must complete the operating system setup procedure before turning off your computer; otherwise, unexpected results might occur.
2. The setup program might be slightly different from the one described in your operating-system manual. Some choices do not appear because they are preset.
3. During the setup procedure, you must indicate that you accept the license agreement.
4. The Microsoft registration information will already be displayed in the registration field. If the Product ID number is not already displayed, you must type it. The Product ID is on a label attached to the computer.

You will need the following information to complete the setup program:

- The Microsoft documentation that comes with your computer.
- Network information from your network administrator, if your computer is being connected to a network.
- The printer model and port, if a printer is attached directly to your computer.

After the setup procedure finishes and the computer restarts, the Windows desktop opens. Your computer is ready for use.

Turning off the computer

When you turn off the computer and leave it connected to ac power, the computer can respond to requests, such as a remote request to turn on the computer. To remove all power from the computer, you must disconnect it from the power source.

Some operating systems require an orderly shutdown before you turn off the computer. See your operating-system documentation for information about shutting down the operating system.

Statement 5

CAUTION:

The power-control button on the device and the power switch on the power supply do not turn off the electrical current supplied to the device. The device also might have more than one power cord. To remove all electrical current from the device, ensure that all power cords are disconnected from the power source.

The computer can be turned off in any of the following ways:

- You can turn off your computer from the operating system. If this feature is supported by your operating system, it will turn off the computer after performing an orderly shutdown of the operating system.

To turn off the computer from the Microsoft Windows XP operating system, click **Start** → **Turn Off Computer**; then, select **Turn Off**.

- You can press the power-control button on the front of the computer. If this feature is supported by your operating system, it will turn off the computer after performing an orderly shutdown of the operating system.

Note: After turning off the computer, wait at least 5 seconds before you press the power-control button to turn on the computer again.

- You can press and hold the power-control button for more than 4 seconds to cause an immediate shutdown of the computer. You can use this feature to turn off the computer if the operating system stops functioning.

Chapter 3. Installing software

This chapter describes how to install and configure software for your IBM IntelliStation M Pro Type 6219 computer.

Viewing the license agreement

The IBM *International License Agreement for Non-Warranted Programs* is viewable through Access IBM. Use of your computer signifies acceptance of this agreement. Complete the following steps to view the license agreement:

1. Double-click the **Access IBM** icon.
2. Click **How do I...;** then, click **Solve problems.**
3. Click **IBM International License Agreement.**

Using Access IBM

Access IBM is an interface through which you can quickly access information or perform specific tasks.

The following choices are available from the Access IBM Welcome window:

- **How do I...**

Select this choice to display information about tasks that you typically perform immediately after installing a new computer, such as personalizing your computer to fit your needs, protecting your data, upgrading your computer hardware, purchasing IBM services, purchasing IBM options, solving problems, and viewing the IBM International License Agreement.

- **Tools & Tips**

Select this choice to display information about access support, diagnostic programs, antivirus tools, configuration backup and restoration tools, and online books.

- **On the Web**

Select this choice to display information about obtaining additional information and support on the World Wide Web.

Complete the following steps to use Access IBM:

1. Double-click the **Access IBM** icon on the Windows desktop. If the **Access IBM** icon is not available on your desktop, click **Start → Access IBM.**
2. Click one of the tabs on the Access IBM Welcome window (for example, **How do I...**).
3. Click a topic.

Using the built-in configuration programs

The following configuration programs are provided with your computer:

- **Configuration/Setup Utility**

This program is part of the basic input/output system (BIOS) code that comes with your computer. You can use this program to configure serial- and parallel-connector assignments, change the drive startup sequence, set the date and time, and set passwords. For more information on how to start this utility, see “Starting the Configuration/Setup Utility program”. For detailed information, see the *User's Guide*.

- **Broadcom NetXtreme Gigabit Ethernet Boot Agent**

The Broadcom NetXtreme Gigabit Ethernet Boot Agent program is part of the BIOS code that comes with your computer. You can use this program to configure the computer to start from the network. For information about how to enable this utility, see “Starting the **Broadcom** NetXtreme Gigabit Ethernet Boot Agent” on page 37.

- **SCSISelect Utility (some models)**

With the SCSISelect Utility program, you can configure the devices that are connected to the optional SCSI adapter. Use this program to change default values, resolve configuration conflicts, and perform a low-level format on a SCSI hard disk drive. For information about how to start this utility, see “Starting the SCSISelect utility program (some models)” on page 37.

- **Boot Menu**

The Boot Menu is part of the BIOS code that comes with your computer. You can use the Boot Menu program to temporarily alter the order in which the computer accesses startable devices for one startup session without reconfiguring the startup sequence in the Configuration/Setup Utility program.

Note: See the *User's Guide* on the IBM *IntelliStation Documentation* CD for detailed instructions for using the configuration programs.

The following sections provide the instructions for starting the utility programs.

Starting the Configuration/Setup Utility program

Configuration/Setup is a menu-driven utility that is part of the BIOS code that comes with your computer. You can use it to:

- Configure serial connector assignments
- Change the startup sequence
- Enable USB keyboard and mouse support
- Resolve configuration conflicts
- Set the date and time
- Set an administrator password

Complete the following steps to start the Configuration/Setup Utility program:

1. Turn on the computer and watch the monitor screen.
2. When the message Press F1 for Configuration/Setup, Press F12 for Boot Menu appears, press the F1 key.
3. Follow the instructions that appear on the screen.

Starting the Broadcom NetXtreme Gigabit Ethernet Boot Agent

The Broadcom NetXtreme Gigabit Ethernet Boot Agent program is a built-in configuration utility program that you can use to configure the computer to start from the network. You enable the Broadcom NetXtreme Gigabit Ethernet Boot Agent program and establish your network as a startup device using the Configuration/Setup Utility program.

Complete the following steps to enable Broadcom NetXtreme Gigabit Ethernet Boot Agent:

1. Turn on the computer and watch the monitor screen.
2. When the message Press F1 for Configuration/Setup, Press F12 for Boot Menu appears, press the F1 key.
3. From the Configuration/Setup Utility main menu, select **Devices and I/O Ports** and press Enter.
4. Select **System Board Ethernet PXE/DHCP** and use the Right Arrow (→) key to set it to **Enabled**.
5. Select **Save Settings** and press Enter.

For details about using the Configuration/Setup Utility program to configure the computer to start from the network, see the *User's Guide* on the IBM *IntelliStation Documentation CD*.

Starting the SCSISelect utility program (some models)

SCSISelect is a menu-driven configuration utility program that you can use to:

- View the default SCSI IDs
- Locate and correct configuration conflicts

Complete the following steps to start the SCSISelect Utility program:

1. Turn on the computer and watch the monitor screen.
2. When the <<< Press <CTRL><A> for SCSISelect Utility! >>> prompt appears, press Ctrl+A.
3. When the prompt Would you like to configure the host adapter or run the SCSI disk utility? appears, make your selection and press Enter.
4. Use the arrow keys to select a choice from the menu.
5. Follow the instructions on the screen to change the settings of the selected items; then, press Enter.

Starting the Boot Menu program

Complete the following steps to start the Boot Menu program:

1. Turn on the computer and watch the monitor screen.
2. When the message Press F1 for Configuration/Setup, Press F12 for Boot Menu appears, press the F12 key.
3. Follow the instructions that appear on the screen.

Chapter 4. Completing the installation

This chapter contains information to help you register your computer, record important information in case of emergency, and prepare emergency utilities.

Registering your computer

Registering your computer helps IBM provide better service to you. When IBM receives your registration information, it is placed into a central technical support database. If you need technical assistance, the technical-support representative will have information about your computer. In addition, comments about your computer are reviewed by a team dedicated to customer satisfaction and are taken into consideration in making improvements to IBM computers. To register your computer, use one of the following methods:

- Double-click the **IBM Registration** icon on the Windows desktop, and then follow the instructions.
- Register your computer through Access IBM. In Access IBM,
 1. Click **Start**.
 2. Click **Access IBM**.
 3. Click **How do I...**
 4. Click **Get started**.
 5. Click **Registering your IBM Computer**, and then follow the instructions in the window.
- Register your computer at <http://www.ibm.com/pc/register> on the World Wide Web.

Note: If you use the registration program that starts through Access IBM or the **IBM Registration** icon on the Windows desktop, you can print the registration information and provide a mailing address in the event no Internet access is available.

Recording important numbers

Record information about your computer in the following table. You will need this information when you register your computer with IBM.

| | |
|--------------------------|--------------------------|
| Product name | IBM IntelliStation M Pro |
| Machine type | 6219 |
| Model number | _____ |
| Serial number | _____ |
| Key serial number | _____ |
| Key manufacturer | _____ |
| Key phone number | _____ |

Creating an emergency recovery-repair diskette

At your earliest opportunity, create a recovery-repair diskette, and an IBM Enhanced Diagnostics diskette, and store them in a safe place. In the unlikely event that your desktop becomes unusable, you can use the recovery-repair diskette to access the Product Recovery program. Additional information about the diskette is in Access IBM. For more information about using this diskette, see the *User's Guide* on the IBM *IntelliStation Documentation CD*.

Complete the following steps to create a recovery-repair diskette:

1. From Access IBM, click the **How do I...** tab; then, click **Protect data**.
2. Click **Creating emergency diskettes**.
3. Click **Recovery Repair diskette**.
4. Follow the instructions on the screen.

Creating an IBM Enhanced Diagnostics Diskette

The *IBM Enhanced Diagnostics* diskette is a self-starting diagnostic diskette used to test hardware components on your computer.

You can use one of the following methods to create an IBM Enhanced Diagnostics diskette:

- Create a diskette using Access IBM
- Download a program image from the World Wide Web
- Create a diskette from the *Device Drivers and IBM Enhanced Diagnostics CD*

Complete the following steps to create an IBM Enhanced Diagnostics diskette using Access IBM:

1. Double-click the **Access IBM** icon and click the **How do I...** tab; then, click **Protect data**.
2. Click **Creating emergency diskettes** → **Diagnostics diskette**. A help panel with instructions for creating a diagnostics diskette appears.
3. Follow the instructions on the screen to create the diskette.

Complete the following steps to create a startable IBM Enhanced Diagnostics diskette from the World Wide Web:

1. Go to <http://www.ibm.com/pc/support/> on the World Wide Web.
2. Download the diagnostics file for your computer to a hard disk directory (not to a diskette).
3. Go to a DOS prompt and change to the directory where the file was downloaded.
4. Insert a formatted, blank, high-density diskette into the diskette drive.
5. Type `filename x:`
where *filename* is the name of the file you downloaded from the Web and *x* is the letter for the diskette drive; then, press Enter.

The downloaded file is self-extracting and will be copied to the diskette. When the file is copied, store the diskette in a safe place.

Complete the following steps to create an IBM Enhanced Diagnostics diskette from the *Device Drivers and IBM Enhanced Diagnostics CD*:

1. Insert a formatted, blank, high-density diskette into the diskette drive.

2. Insert the *Device Drivers and IBM Enhanced Diagnostics* CD into the CD-ROM drive.
3. At the command prompt, switch to the CD-ROM drive letter. For example, type `e:` (where `e` is the CD-ROM drive letter), and press Enter.
4. Change to the PCDR directory. Type, `cd pcdr` and press Enter.
5. Type `makediag` and press Enter.
6. Follow the instructions on the screen to create the diskette.

For more information about using the IBM Enhanced Diagnostics program, see the *User's Guide* on the IBM *IntelliStation Documentation* CD.

Chapter 5. Solving problems

This section provides basic troubleshooting information to help you resolve some common problems that might occur with your computer.

If you cannot locate and correct the problem using the information in this section, see Appendix A, “Getting help and technical assistance” on page 51 and “Solving problems” in the *User’s Guide* on the IBM *IntelliStation Documentation CD*.

Diagnostic tools overview

The following tools are available to help you identify and resolve hardware-related problems:

- **POST beep codes and error messages**

The power-on self-test (POST) indicates the detection of a problem. See “Power-on self-test (POST)” on page 44 and “POST error messages” on page 44 for information.

- **Diagnostic programs and error messages**

The diagnostic programs are provided on the *Device Drivers and IBM Enhanced Diagnostics CD*. These programs test the major components of your computer.

Note: See “Solving problems” in the *User’s Guide* on the IBM *IntelliStation Documentation CD* for information about the diagnostic programs.

- **Troubleshooting chart**

This chart lists problem symptoms and steps to correct the problems. See the “Troubleshooting chart” on page 45 for information.

- **System-board error LEDs**

An LED on the system board might also be lit to help isolate an error indicated by the system error LED on the front of the computer. See the “System-board error LEDs” on page 48 for more information.

Power-on self-test (POST)

When you turn on the computer, the power-on self-test (POST) performs a series of tests to check the operation of system components and some of the installed options.

If POST finishes without detecting any problems, the first window of your operating system or application program appears.

If POST detects a problem, more than one beep sounds and an error message appears on your screen.

Notes:

1. If you have a user password set, you must type the password and press Enter, when prompted, before the operating system will start.
2. A single problem might cause several error messages. When this occurs, work to correct the cause of the first error message. After you correct the cause of the first error message, the other error messages usually will be resolved the next time you run the test.

POST beep codes

The possible types of beep codes are:

No beeps

If no beep occurs after your computer completes POST, call for service.

Continuous beep

Your microprocessor has failed, or your system board or speaker subsystem might contain a failing component. If the system continues through POST with no errors, call for service. If no video appears, the microprocessor has failed. Call for service.

POST error messages

The following table provides an abbreviated list of the error messages that might appear during POST.

Note: See the *User's Guide* on the IBM *IntelliStation Documentation* CD for more information about the POST error messages.

| POST message | Failing device or problem found | Suggested action |
|--------------|----------------------------------|--|
| 162 | Change in device configuration | Verify that your optional devices are turned on and installed correctly. |
| 163 | Time of day has not been set | Set the correct date and time. |
| 164 | Change in memory configuration | Verify that your memory is installed properly; then, restart the computer and run the Configuration/Setup Utility program. |
| 201 | Change in memory configuration | Verify that your memory is fully seated and installed properly. |
| 289 | Failing DIMM was disabled | Verify that your memory is correct for your computer and that it is installed properly. |
| 301 303 | Keyboard and keyboard controller | Ensure that the keyboard cable is connected and nothing is resting on the keyboard keys. |

| POST message | Failing device or problem found | Suggested action |
|----------------------|--|---|
| 11xx | Serial port error | Verify that the serial cable is connected correctly. |
| 1162 | Serial port configuration error | Start the Configuration/Setup Utility program and ensure that the IRQ and I/O port assignments needed by the serial port are available. |
| 1601 | BIOS code update needed | Download and install the latest level of system BIOS code. |
| 1800 | PCI adapter hardware interrupt | Start the Configuration/Setup Utility program and verify that the interrupt resource settings are correct. |
| 2400 2462 | Video adapter and memory | Call for service. |
| 00180xxx | A PCI adapter requested a resource that is not available | Start the Configuration/Setup Utility program and ensure that the resources needed by the PCI adapter are available. |
| 012980xx 012981xx | Data for microprocessor | Download and install the latest level of system BIOS code. |
| I9990305 | POST could not find an operating system | Install your operating system. |

Troubleshooting chart

Notes:

1. See "Solving Problems" in the *User's Guide* on the IBM *IntelliStation Documentation* CD for more detailed troubleshooting charts.
2. If you cannot find the problem in the troubleshooting chart, run the diagnostic programs. If you have run the diagnostic test programs, or if running the tests does not detect the problem, call for service.

CD-ROM drive problems

| CD-ROM Drive symptom | Suggested action |
|---|---|
| CD-ROM drive is not recognized. | Verify that: <ul style="list-style-type: none"> • The IDE channel to which the CD-ROM drive is attached (primary or secondary) is enabled in the Configuration/Setup Utility program. • All cables and jumpers are installed correctly. • The correct device driver is installed for the CD-ROM drive. If the problem remains, call for service. |
| CD is not working properly. | Clean the CD. If the problem remains, call for service. |
| CD-ROM drive tray is not working. (The computer must be turned on.) | Insert the end of a straightened paper clip into the manual tray-release opening. If the problem remains, call for service. |

Diskette drive problems

| Diskette drive symptom | Suggested action |
|--|---|
| Diskette drive activity LED stays on, or the system bypasses the diskette drive. | <ol style="list-style-type: none"> If there is a diskette in the drive, verify that: <ul style="list-style-type: none"> The diskette drive is enabled in the Configuration/Setup utility program. The diskette is good and not damaged. (Try another diskette if you have one.) The diskette is inserted correctly in the drive. The diskette contains the necessary files to start the computer. The software program is working properly. The cable is installed correctly (in the proper orientation). To prevent diskette drive read/write errors, be sure the distance between monitors and diskette drives is at least 76 mm (3 in.). <p>If the problem remains, call for service.</p> |

Hard disk drive problems

| Hard disk drive symptom | Suggested action |
|---|--|
| Not all drives are recognized by the hard disk drive diagnostic test (Fixed Disk test). | <ol style="list-style-type: none"> Remove the first drive not recognized and try the hard disk drive diagnostic test again. If the remaining drives are recognized, replace the drive you removed with a new one. <p>If the problem remains, call for service.</p> |

Keyboard, mouse, or pointing-device problems

| Keyboard, mouse, or pointing-device symptom | Suggested action |
|---|---|
| All or some keys on the keyboard do not work. | <p>Verify that:</p> <ul style="list-style-type: none"> The keyboard cable is securely connected to the system, and the keyboard and mouse cables are not reversed. Both the computer and the monitor are turned on. Try using another keyboard. <p>If the problem remains, call for service.</p> |
| The mouse or pointing device does not work. | <p>Verify that:</p> <ul style="list-style-type: none"> The mouse or pointing-device cable is securely connected, and that the keyboard and mouse cables are not reversed. The mouse device drivers are installed correctly. Both the computer and the monitor are turned on. Try using another mouse or pointing device. <p>If the problem remains, call for service.</p> |

Memory problems

| Memory symptom | Suggested action |
|---|---|
| The amount of system memory displayed is less than the amount of physical memory installed. | <ol style="list-style-type: none">1. Verify that:<ul style="list-style-type: none">• The memory modules are seated properly.• You have installed the correct type of memory.• If you changed the memory, you updated the memory configuration with the Configuration/Setup Utility program.• All banks of memory on the DIMMs are enabled. The computer might have automatically disabled a DIMM bank when it detected a problem or a DIMM bank could have been manually disabled.2. Check the POST error log for error message 289:<ul style="list-style-type: none">• If the DIMM was disabled by a system-management interrupt (SMI), replace the DIMM.• If the DIMM was disabled by the user or by POST:<ol style="list-style-type: none">a. Start the Configuration/Setup Utility program.b. Enable the DIMM.c. Save the configuration and restart the computer. <p>If the problem remains, call for service.</p> |

Microprocessor problems

| Microprocessor symptom | Suggested action |
|--|-------------------|
| The computer emits a continuous tone during POST. (The startup (boot) microprocessor is not working properly.) | Call for service. |

Monitor problems

| Monitor symptom | Suggested action |
|--------------------------|---|
| The screen is blank. | <p>Verify that:</p> <ul style="list-style-type: none">• The computer power cord is plugged into the computer and a working electrical outlet.• The monitor cables are connected properly.• The monitor is turned on and the Brightness and Contrast controls are adjusted correctly. <p>If the problem remains, call for service.</p> |
| Only the cursor appears. | Call for service. |

| Monitor symptom | Suggested action |
|---|--|
| The screen is wavy, unreadable, rolling, distorted, or has screen jitter. | <p>If the monitor self-tests show the monitor is working properly, consider the location of the monitor. Magnetic fields around other devices (such as transformers, appliances, fluorescent lights, and other monitors) can cause screen jitter or wavy, unreadable, rolling, or distorted screen images. If this happens, turn off the monitor. (Moving a color monitor while it is turned on might cause screen discoloration.) Then, move the device and the monitor at least 305 mm (12 in.) apart. Turn on the monitor.</p> <p>Notes:</p> <ol style="list-style-type: none"> To prevent diskette drive read/write errors, be sure the distance between monitors and diskette drives is at least 76 mm (3 in.). Non-IBM monitor cables might cause unpredictable problems. An enhanced monitor cable with additional shielding is available for the 9521 and 9527 monitors. For information about the enhanced monitor cable, contact your IBM reseller or IBM marketing representative. <p>If the problem remains, call for service.</p> |
| Wrong characters appear on the screen. | <p>If the wrong language is displayed, update the BIOS code with the correct language.</p> <p>If the problem remains, call for service.</p> |
| No video. | <ol style="list-style-type: none"> Make sure the correct machine is selected, if applicable. Make sure all cables are locked down. <p>If the problem remains, call for service.</p> |

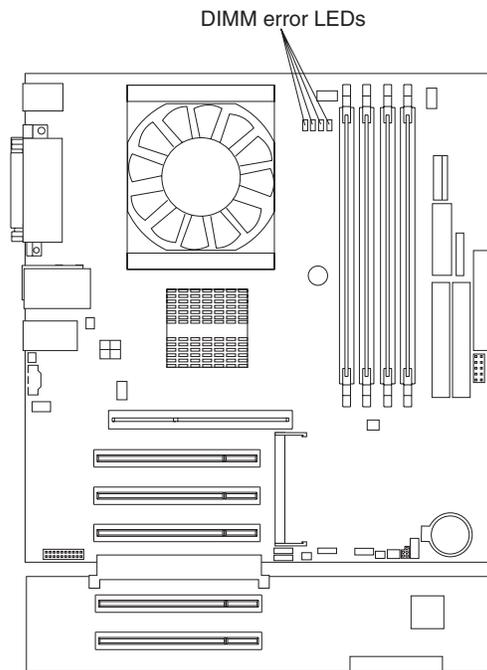

Power problems

| Power symptom | Suggested action |
|--------------------------------|--|
| The computer does not turn on. | <p>Verify that:</p> <ul style="list-style-type: none"> The power cords are properly connected to the computer. The electrical outlet functions properly. The type of memory installed is correct. If you just installed an option, remove it, and restart the computer. If the computer now turns on, you might have installed more options than the power supply supports. <p>If the problem remains, call for service.</p> |

System-board error LEDs

The following illustration shows the location of the LEDs on the system board. You might need to refer to this illustration when solving problems with the computer.

Each error LED is lit to indicate a problem with a specific component. After a problem is corrected, its LED will not be lit the next time the computer is restarted; if the problem remains, the LED will be lit again. See "Solving problems" in the *User's Guide* on the IBM *IntelliStation Documentation* CD for additional information.

Product Recovery program

The Product Recovery program reinstalls your operating system and preinstalled software. It is on a hidden partition on the hard disk. The Product Recovery program runs independently of the operating system.

If you are using FDISK, Disk Management, or another utility to reformat the hard disk, you might see the partition where the Product Recovery program is stored. Do not delete this partition; otherwise, the Product Recovery program will be lost.

If your hard disk drive, including the partition where the Product Recovery program resides, becomes damaged or you replace the hard disk drive, contact IBM to order the *IBM Product Recovery CD* to recover your preinstalled operating system, application programs and device drivers. See Appendix A, "Getting help and technical assistance" on page 51 for details.

Appendix A. Getting help and technical assistance

If you need help, service, or technical assistance or just want more information about IBM products, you will find a wide variety of sources available from IBM to assist you. This appendix contains information about where to go for additional information about IBM and IBM products, what to do if you experience a problem with your xSeries™ or IntelliStation system, and whom to call for service, if it is necessary.

Before you call

Before you call, make sure that you have taken these steps to try to solve the problem yourself:

- Check all cables to make sure that they are connected.
- Check the power switches to make sure that the system is turned on.
- Use the troubleshooting information in your system documentation, and use the diagnostic tools that come with your system.
- Go to the IBM Support Web site at <http://www.ibm.com/pc/support/> to check for technical information, hints, tips, and new device drivers.
- Use an IBM discussion forum on the IBM Web site to ask questions.

You can solve many problems without outside assistance by following the troubleshooting procedures that IBM provides in the online help or in the publications that are provided with your system and software. The information that comes with your system also describes the diagnostic tests that you can perform. Most xSeries and IntelliStation systems, operating systems, and programs come with information that contains troubleshooting procedures and explanations of error messages and error codes. If you suspect a software problem, see the information for the operating system or program.

Using the documentation

Information about your IBM xSeries or IntelliStation system and preinstalled software, if any, is available in the documentation that comes with your system. That documentation includes printed books, online books, README files, and help files. See the troubleshooting information in your system documentation for instructions for using the diagnostic programs. The troubleshooting information or the diagnostic programs might tell you that you need additional or updated device drivers or other software. IBM maintains pages on the World Wide Web where you can get the latest technical information and download device drivers and updates. To access these pages, go to <http://www.ibm.com/pc/support/> and follow the instructions. Also, you can order publications through the IBM Publications Ordering System at <http://www.elink.ibm.com/public/applications/publications/cgibin/pbi.cgi>.

Getting help and information from the World Wide Web

On the World Wide Web, the IBM Web site has up-to-date information about IBM xSeries and IntelliStation products, services, and support. The address for IBM xSeries information is <http://www.ibm.com/eserver/xseries/>. The address for IBM IntelliStation information is <http://www.ibm.com/pc/intellistation/>.

You can find service information for your IBM products, including supported options, at <http://www.ibm.com/pc/support/>. If you click **Profile** from the support page, you can create a customized support page. The support page has many sources of information and ways for you to solve problems, including:

- Diagnosing problems, using the IBM Online Assistant
- Downloading the latest device drivers and updates for your products
- Viewing Frequently Asked Questions (FAQ)
- Viewing hints and tips to help you solve problems
- Participating in IBM discussion forums
- Setting up e-mail notification of technical updates about your products

Software service and support

Through IBM Support Line, you can get telephone assistance, for a fee, with usage, configuration, and software problems with xSeries servers, IntelliStation workstations, and appliances. For information about which products are supported by Support Line in your country or region, go to <http://www.ibm.com/services/sl/products/>.

For more information about Support Line and other IBM services, go to <http://www.ibm.com/services/>, or go to <http://www.ibm.com/planetwide/> for support telephone numbers.

Hardware service and support

You can receive hardware service through IBM Integrated Technology Services or through your IBM reseller, if your reseller is authorized by IBM to provide warranty service. Go to <http://www.ibm.com/planetwide/> for support telephone numbers.

In the U.S. and Canada, hardware service and support is available 24 hours a day, 7 days a week. In the U.K., these services are available Monday through Friday, from 9 a.m. to 6 p.m.

Appendix B. Warranty information

This section contains information about your warranty period and the service and support that are provided by your warranty.

Warranty period

The warranty period varies by machine type and country or region.

Contact your place of purchase for warranty service information. Some IBM Machines are eligible for on-site warranty service depending on the country or region where service is performed.

Prior to on-site warranty service, you are required to go through problem determination with an IBM service specialist call center technician.

A warranty period of 3 years on parts and 1 year on labor means that IBM will provide warranty service without charge for:

1. parts and labor during the first year of the warranty period
2. parts only, on an exchange basis, in the second and third years of the warranty period. IBM will charge you for any labor it provides in performance of the repair or replacement.

The IBM Machine Warranties Web site at http://www.ibm.com/servers/support/machine_warranties/ contains a worldwide overview of the IBM Statement of Limited Warranty for IBM Machines, a glossary of terms used in the Statement of Limited Warranty, Frequently Asked Questions (FAQ), and links to Product Support Web pages. The IBM Statement of Limited Warranty is available from this Web site in 29 languages in Portable Document Format (PDF).

Machine - IBM IntelliStation M Pro Type 6219

| Country or region | Warranty period | Service delivery method |
|-------------------|----------------------------------|-------------------------|
| Worldwide | Parts - 3 years, labor - 3 years | On-site |

Problem determination

Prior to on-site warranty service, you are required to go through problem determination with an IBM service specialist call center technician. The service specialist will run diagnostic tests on the hardware and check the software.

Running diagnostics

The IBM service specialist will help you determine whether your equipment is functioning as specified. It might be necessary to isolate the failing xSeries, Netfinity®, or IntelliStation system; IBM component; or both from any active production environment to run diagnostics and perform defect-isolation programs. You are responsible for making the system, IBM component, or both available for running diagnostics and defect-isolation programs.

Checking software

The IBM service specialist will help you ensure that the correct BIOS code, firmware, device drivers, and other supporting IBM software are installed and correctly configured. It might be necessary to manually gather information about the

relevant software levels or run IBM-approved utility programs to gather this information. It might be necessary to isolate the failing system from any active production environment to gather this information. You are responsible, with assistance from the service specialist, for gathering this information. The IBM Statement of Limited Warranty does not include on-site assistance with this activity.

Warranty service and support

With the original purchase of an IBM xSeries or IntelliStation system, you have access to extensive service and support. During the IBM Machine warranty period, you may call IBM or your reseller for problem-determination assistance under the terms of the IBM Statement of Limited Warranty.

The following services are available during the warranty period:

- **Problem determination** - Trained personnel are available to assist you with determining if you have a hardware problem and deciding what action is necessary to fix the problem.
- **IBM hardware repair** - If the problem is determined to be caused by IBM hardware under warranty, trained service personnel are available to provide the applicable level of service, either on-site or at an IBM service center as determined by IBM.
- **Engineering Change management** - Occasionally, there might be changes that are required after a product has been shipped from IBM. In those instances, IBM will make Engineering Changes (ECs) available that apply to your hardware.
- **Customer replaceable units (CRUs)** - Some parts of IBM xSeries and IntelliStation systems are designated as customer replaceable units. IBM ships CRUs to you for replacement by you. CRUs include keyboards, monitors, memory, diskette drives, hard disk drives, and mice (this list is not inclusive of all CRUs).

The following items are not covered under warranty service:

- Replacement or use of non-IBM parts. All IBM parts contain a 7-character identification in the format IBM FRU XXXXXXXX.
- Identification of software problem sources.
- Installation of customer replaceable units (CRUs).
- Installation and configuration of BIOS code, firmware, or device drivers that are designated as customer installable.

See the IBM Statement of Limited Warranty for a full explanation of IBM warranty terms. Be sure to retain your proof of purchase to obtain warranty service.

Please have the following information ready when you call:

- The machine type and model of your IBM hardware product (if available)
- Serial numbers of your IBM hardware products
- A description of the problem
- The exact wording of any error messages
- Hardware and software configuration information

International Warranty Service

If you travel with your xSeries or IntelliStation system or relocate it to a country or region where your system is sold and serviced by IBM or IBM resellers authorized

to perform warranty service, International Warranty Service (IWS) is available during the warranty period. Eligible IBM systems are identified by their four-digit machine types.

You can obtain IWS through the service delivery method (such as depot, carry-in, or on-site) provided in the servicing country or region. Service methods and procedures vary by country or region, and some service or parts might not be available in all countries and regions. Service centers in certain countries or regions might not be able to service all models of a particular machine type. In addition, some countries or regions might have fees and restrictions that apply at the time of service.

To determine whether your system is eligible for IWS, go to <http://www.ibm.com/pc/support/> and click **Warranty lookup**.

Purchasing additional services

During and after the warranty period, you can purchase additional services, such as support for IBM and non-IBM hardware, operating systems, and application programs; network setup and configuration; upgraded or extended hardware repair services; and custom installations. Service availability and service name might vary by country or region.

For more information about these services, contact your IBM marketing representative.

IBM Statement of Limited Warranty Z125-4753-06 8/2000

Part 1 - General Terms

This Statement of Limited Warranty includes Part 1 - General Terms and Part 2 - Country-unique Terms. The terms of Part 2 replace or modify those of Part 1. The warranties provided by IBM in this Statement of Limited Warranty apply only to Machines you purchase for your use, and not for resale, from IBM or your reseller. The term "Machine" means an IBM machine, its features, conversions, upgrades, elements, or accessories, or any combination of them. The term "Machine" does not include any software programs, whether pre-loaded with the Machine, installed subsequently or otherwise. Unless IBM specifies otherwise, the following warranties apply only in the country where you acquire the Machine. Nothing in this Statement of Limited Warranty affects any statutory rights of consumers that cannot be waived or limited by contract. If you have any questions, contact IBM or your reseller.

The IBM Warranty for Machines: IBM warrants that each Machine 1) is free from defects in materials and workmanship and 2) conforms to IBM's Official Published Specifications ("Specifications"). The warranty period for a Machine is a specified, fixed period commencing on its Date of Installation. The date on your sales receipt is the Date of Installation unless IBM or your reseller informs you otherwise.

If a Machine does not function as warranted during the warranty period, and IBM or your reseller are unable to either 1) make it do so or 2) replace it with one that is at least functionally equivalent, you may return it to your place of purchase and your money will be refunded.

Extent of Warranty: The warranty does not cover the repair or exchange of a Machine resulting from misuse, accident, modification, unsuitable physical or operating environment, improper maintenance by you, or failure caused by a product for which IBM is not responsible. The warranty is voided by removal or alteration of Machine or parts identification labels.

THESE WARRANTIES ARE YOUR EXCLUSIVE WARRANTIES AND REPLACE ALL OTHER WARRANTIES OR CONDITIONS, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OR CONDITIONS OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THESE WARRANTIES GIVE YOU SPECIFIC LEGAL RIGHTS AND YOU MAY ALSO HAVE OTHER RIGHTS WHICH VARY FROM JURISDICTION TO JURISDICTION. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF EXPRESS OR IMPLIED WARRANTIES, SO THE ABOVE EXCLUSION OR LIMITATION MAY NOT APPLY TO YOU. IN THAT EVENT, SUCH WARRANTIES ARE LIMITED IN DURATION TO THE WARRANTY PERIOD. NO WARRANTIES APPLY AFTER THAT PERIOD.

Items Not Covered by Warranty: IBM does not warrant uninterrupted or error-free operation of a Machine. Any technical or other support provided for a Machine under warranty, such as assistance via telephone with "how-to" questions and those regarding Machine set-up and installation, will be provided **WITHOUT WARRANTIES OF ANY KIND.**

Warranty Service: To obtain warranty service for a Machine, contact IBM or your reseller. If you do not register your Machine with IBM, you may be required to present proof of purchase.

During the warranty period, IBM or your reseller, if approved by IBM to provide warranty service, provides without charge certain types of repair and exchange service to keep Machines in, or restore them to, conformance with their Specifications. IBM or your reseller will inform you of the available types of service for a Machine based on its country of installation. At its discretion, IBM or your reseller will 1) either repair or exchange the failing Machine and 2) provide the service either at your location or a service center. IBM or your reseller will also manage and install selected engineering changes that apply to the Machine.

Some parts of IBM Machines are designated as Customer Replaceable Units (called "CRUs"), e.g., keyboards, memory, or hard disk drives. IBM ships CRUs to you for replacement by you. You must return all defective CRUs to IBM within 30 days of your receipt of the replacement CRU. You are responsible for downloading designated Machine Code and Licensed Internal Code updates from an IBM Internet Web site or from other electronic media, and following the instructions that IBM provides.

When warranty service involves the exchange of a Machine or part, the item IBM or your reseller replaces becomes its property and the replacement becomes yours. You represent that all removed items are genuine and unaltered. The replacement may not be new, but will be in good working order and at least functionally equivalent to the item replaced. The replacement assumes the warranty service status of the replaced item. Many features, conversions, or upgrades involve the removal of parts and their return to IBM. A part that replaces a removed part will assume the warranty service status of the removed part.

Before IBM or your reseller exchanges a Machine or part, you agree to remove all features, parts, options, alterations, and attachments not under warranty service.

You also agree to

1. ensure that the Machine is free of any legal obligations or restrictions that prevent its exchange;
2. obtain authorization from the owner to have IBM or your reseller service a Machine that you do not own; and
3. where applicable, before service is provided:
 - a. follow the problem determination, problem analysis, and service request procedures that IBM or your reseller provides;
 - b. secure all programs, data, and funds contained in a Machine;
 - c. provide IBM or your reseller with sufficient, free, and safe access to your facilities to permit them to fulfill their obligations; and
 - d. inform IBM or your reseller of changes in a Machine's location.

IBM is responsible for loss of, or damage to, your Machine while it is 1) in IBM's possession or 2) in transit in those cases where IBM is responsible for the transportation charges.

Neither IBM nor your reseller is responsible for any of your confidential, proprietary or personal information contained in a Machine which you return to IBM or your reseller for any reason. You should remove all such information from the Machine prior to its return.

Limitation of Liability: Circumstances may arise where, because of a default on IBM's part or other liability, you are entitled to recover damages from IBM. In each such instance, regardless of the basis on which you are entitled to claim damages from IBM (including fundamental breach, negligence, misrepresentation, or other

contract or tort claim), except for any liability that cannot be waived or limited by applicable laws, IBM is liable for no more than

1. damages for bodily injury (including death) and damage to real property and tangible personal property; and
2. the amount of any other actual direct damages, up to the charges (if recurring, 12 months' charges apply) for the Machine that is subject of the claim. For purposes of this item, the term "Machine" includes Machine Code and Licensed Internal Code.

This limit also applies to IBM's suppliers and your reseller. It is the maximum for which IBM, its suppliers, and your reseller are collectively responsible.

UNDER NO CIRCUMSTANCES IS IBM LIABLE FOR ANY OF THE FOLLOWING: 1) THIRD-PARTY CLAIMS AGAINST YOU FOR DAMAGES (OTHER THAN THOSE UNDER THE FIRST ITEM LISTED ABOVE); 2) LOSS OF, OR DAMAGE TO, YOUR RECORDS OR DATA; OR 3) SPECIAL, INCIDENTAL, OR INDIRECT DAMAGES OR FOR ANY ECONOMIC CONSEQUENTIAL DAMAGES, LOST PROFITS OR LOST SAVINGS, EVEN IF IBM, ITS SUPPLIERS OR YOUR RESELLER IS INFORMED OF THEIR POSSIBILITY. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATION OR EXCLUSION MAY NOT APPLY TO YOU.

Governing Law: Both you and IBM consent to the application of the laws of the country in which you acquired the Machine to govern, interpret, and enforce all of your and IBM's rights, duties, and obligations arising from, or relating in any manner to, the subject matter of this Agreement, without regard to conflict of law principles.

Part 2 - Country-unique Terms

AMERICAS

BRAZIL

Governing Law: *The following is added after the first sentence:* Any litigation arising from this Agreement will be settled exclusively by the court of Rio de Janeiro.

NORTH AMERICA

Warranty Service: *The following is added to this Section:* To obtain warranty service from IBM in Canada or the United States, call 1-800-IBM-SERV (426-7378).

CANADA

Governing Law: *The following replaces "laws of the country in which you acquired the Machine" in the first sentence:* laws in the Province of Ontario.

UNITED STATES

Governing Law: *The following replaces "laws of the country in which you acquired the Machine" in the first sentence:* laws of the State of New York.

ASIA PACIFIC

AUSTRALIA

The IBM Warranty for Machines: *The following paragraph is added to this Section:* The warranties specified in this Section are in addition to any rights you may have under the Trade Practices Act 1974 or other similar legislation and are only limited to the extent permitted by the applicable legislation.

Limitation of Liability: *The following is added to this Section:* Where IBM is in breach of a condition or warranty implied by the Trade Practices Act 1974 or other similar legislation, IBM's liability is limited to the repair or replacement of the goods or the supply of equivalent goods. Where that condition or warranty relates to right to sell, quiet possession or clear title, or the goods are of a kind ordinarily acquired for personal, domestic or household use or consumption, then none of the limitations in this paragraph apply.

Governing Law: *The following replaces "laws of the country in which you acquired the Machine" in the first sentence:* laws of the State or Territory.

CAMBODIA, LAOS, AND VIETNAM

Governing Law: *The following replaces "laws of the country in which you acquired the Machine" in the first sentence:* laws of the State of New York.

The following is added to this Section: Disputes and differences arising out of or in connection with this Agreement shall be finally settled by arbitration which shall be held in Singapore in accordance with the rules of the International Chamber of Commerce (ICC). The arbitrator or arbitrators designated in conformity with those rules shall have the power to rule on their own competence and on the validity of the Agreement to submit to arbitration. The arbitration award shall be final and binding for the parties without appeal and the arbitral award shall be in writing and set forth the findings of fact and the conclusions of law.

All proceedings shall be conducted, including all documents presented in such proceedings, in the English language. The number of arbitrators shall be three, with each side to the dispute being entitled to appoint one arbitrator.

The two arbitrators appointed by the parties shall appoint a third arbitrator before proceeding upon the reference. The third arbitrator shall act as chairman of the proceedings. Vacancies in the post of chairman shall be filled by the president of the ICC. Other vacancies shall be filled by the respective nominating party. Proceedings shall continue from the stage they were at when the vacancy occurred.

If one of the parties refuses or otherwise fails to appoint an arbitrator within 30 days of the date the other party appoints its, the first appointed arbitrator shall be the sole arbitrator, provided that the arbitrator was validly and properly appointed.

The English language version of this Agreement prevails over any other language version.

HONG KONG AND MACAU

Governing Law: *The following replaces "laws of the country in which you acquired the Machine" in the first sentence:* laws of Hong Kong Special Administrative Region.

INDIA

Limitation of Liability: *The following replaces items 1 and 2 of this Section:*

1. liability for bodily injury (including death) or damage to real property and tangible personal property will be limited to that caused by IBM's negligence;
2. as to any other actual damage arising in any situation involving nonperformance by IBM pursuant to, or in any way related to the subject of this Statement of Limited Warranty, IBM's liability will be limited to the charge paid by you for the individual Machine that is the subject of the claim.

JAPAN

Governing Law: *The following sentence is added to this Section:* Any doubts concerning this Agreement will be initially resolved between us in good faith and in accordance with the principle of mutual trust.

NEW ZEALAND

The IBM Warranty for Machines: *The following paragraph is added to this Section:* The warranties specified in this Section are in addition to any rights you may have under the Consumer Guarantees Act 1993 or other legislation which cannot be excluded or limited. The Consumer Guarantees Act 1993 will not apply in respect of any goods which IBM provides, if you require the goods for the purposes of a business as defined in that Act.

Limitation of Liability: *The following is added to this Section:* Where Machines are not acquired for the purposes of a business as defined in the Consumer Guarantees Act 1993, the limitations in this Section are subject to the limitations in that Act.

PEOPLE'S REPUBLIC OF CHINA (PRC)

Governing Law: *The following replaces this Section:* Both you and IBM consent to the application of the laws of the State of New York (except when local law requires otherwise) to govern, interpret, and enforce all your and IBM's rights, duties, and obligations arising from, or relating in any manner to, the subject matter of this Agreement, without regard to conflict of law principles.

Any disputes arising from or in connection with this Agreement will first be resolved by friendly negotiations, failing which either of us has the right to submit the dispute to the China International Economic and Trade Arbitration Commission in Beijing, the PRC, for arbitration in accordance with its arbitration rules in force at the time. The arbitration tribunal will consist of three arbitrators. The language to be used therein will be English and Chinese. An arbitral award will be final and binding on all the parties, and will be enforceable under the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (1958).

The arbitration fee will be borne by the losing party unless otherwise determined by the arbitral award.

During the course of arbitration, this Agreement will continue to be performed except for the part which the parties are disputing and which is undergoing arbitration.

EUROPE, MIDDLE EAST, AFRICA (EMEA)

THE FOLLOWING TERMS APPLY TO ALL EMEA COUNTRIES: The terms of this Statement of Limited Warranty apply to Machines purchased from IBM or an IBM reseller.

Warranty Service: If you purchase an IBM Machine in Austria, Belgium, Denmark, Estonia, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland or United Kingdom, you may obtain warranty service for that Machine in any of those countries from either (1) an IBM reseller approved to perform warranty service or (2) from IBM. If you purchase an IBM Personal Computer Machine in Albania, Armenia, Belarus, Bosnia and Herzegovina, Bulgaria, Croatia, Czech Republic, Georgia, Hungary, Kazakhstan, Kirghizia, Federal Republic of Yugoslavia, Former Yugoslav Republic of Macedonia (FYROM), Moldova, Poland, Romania, Russia, Slovak Republic, Slovenia, or Ukraine, you may obtain warranty service for that Machine in any of those countries from either (1) an IBM reseller approved to perform warranty service or (2) from IBM.

If you purchase an IBM Machine in a Middle Eastern or African country, you may obtain warranty service for that Machine from the IBM entity within the country of purchase, if that IBM entity provides warranty service in that country, or from an IBM reseller, approved by IBM to perform warranty service on that Machine in that country. Warranty service in Africa is available within 50 kilometers of an IBM authorized service provider. You are responsible for transportation costs for Machines located outside 50 kilometers of an IBM authorized service provider.

Governing Law: The applicable laws that govern, interpret and enforce rights, duties, and obligations of each of us arising from, or relating in any manner to, the subject matter of this Statement, without regard to conflict of laws principles, as well as Country-unique terms and competent court for this Statement are those of the country in which the warranty service is being provided, except that in 1) Albania, Bosnia-Herzegovina, Bulgaria, Croatia, Hungary, Former Yugoslav Republic of Macedonia, Romania, Slovakia, Slovenia, Armenia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, and Uzbekistan, the laws of Austria apply; 2) Estonia, Latvia, and Lithuania, the laws of Finland apply; 3) Algeria, Benin, Burkina Faso, Cameroon, Cape Verde, Central African Republic, Chad, Congo, Djibouti, Democratic Republic of Congo, Equatorial Guinea, France, Gabon, Gambia, Guinea, Guinea-Bissau, Ivory Coast, Lebanon, Mali, Mauritania, Morocco, Niger, Senegal, Togo, and Tunisia, this Agreement will be construed and the legal relations between the parties will be determined in accordance with the French laws and all disputes arising out of this Agreement or related to its violation or execution, including summary proceedings, will be settled exclusively by the Commercial Court of Paris; 4) Angola, Bahrain, Botswana, Burundi, Egypt, Eritrea, Ethiopia, Ghana, Jordan, Kenya, Kuwait, Liberia, Malawi, Malta, Mozambique, Nigeria, Oman, Pakistan, Qatar, Rwanda, Sao Tome, Saudi Arabia, Sierra Leone, Somalia, Tanzania, Uganda, United Arab Emirates, United Kingdom, West Bank/Gaza, Yemen, Zambia, and Zimbabwe, this Agreement will be governed by English Law and disputes relating to it will be submitted to the exclusive jurisdiction of the English courts; and 5) in Greece, Israel, Italy, Portugal, and Spain any legal claim arising out of this Statement will be brought before, and finally settled by, the competent court of Athens, Tel Aviv, Milan, Lisbon, and Madrid, respectively.

THE FOLLOWING TERMS APPLY TO THE COUNTRY SPECIFIED:

AUSTRIA AND GERMANY

The IBM Warranty for Machines: *The following replaces the first sentence of the first paragraph of this Section:* The warranty for an IBM Machine covers the functionality of the Machine for its normal use and the Machine's conformity to its Specifications.

The following paragraphs are added to this Section:

The minimum warranty period for Machines is six months. In case IBM or your reseller is unable to repair an IBM Machine, you can alternatively ask for a partial refund as far as justified by the reduced value of the unrepaired Machine or ask for a cancellation of the respective agreement for such Machine and get your money refunded.

Extent of Warranty: *The second paragraph does not apply.*

Warranty Service: *The following is added to this Section:* During the warranty period, transportation for delivery of the failing Machine to IBM will be at IBM's expense.

Limitation of Liability: *The following paragraph is added to this Section:* The limitations and exclusions specified in the Statement of Limited Warranty will not apply to damages caused by IBM with fraud or gross negligence and for express warranty.

The following sentence is added to the end of item 2: IBM's liability under this item is limited to the violation of essential contractual terms in cases of ordinary negligence.

EGYPT

Limitation of Liability: *The following replaces item 2 in this Section:* as to any other actual direct damages, IBM's liability will be limited to the total amount you paid for the Machine that is the subject of the claim. For purposes of this item, the term "Machine" includes Machine Code and Licensed Internal Code.

Applicability of suppliers and resellers (unchanged).

FRANCE

Limitation of Liability: *The following replaces the second sentence of the first paragraph of this Section:*In such instances, regardless of the basis on which you are entitled to claim damages from IBM, IBM is liable for no more than: *(items 1 and 2 unchanged).*

IRELAND

Extent of Warranty: *The following is added to this Section:* Except as expressly provided in these terms and conditions, all statutory conditions, including all warranties implied, but without prejudice to the generality of the foregoing all warranties implied by the Sale of Goods Act 1893 or the Sale of Goods and Supply of Services Act 1980 are hereby excluded.

Limitation of Liability: *The following replaces items one and two of the first paragraph of this Section:*1. death or personal injury or physical damage to your real property solely caused by IBM's negligence; and 2. the amount of any other actual direct damages, up to 125 percent of the charges (if recurring, the 12 months' charges apply) for the Machine that is the subject of the claim or which otherwise gives rise to the claim.

Applicability of suppliers and resellers (unchanged).

The following paragraph is added at the end of this Section: IBM's entire liability and your sole remedy, whether in contract or in tort, in respect of any default shall be limited to damages.

ITALY

Limitation of Liability: *The following replaces the second sentence in the first paragraph: In each such instance unless otherwise provided by mandatory law, IBM is liable for no more than: 1. (unchanged) 2. as to any other actual damage arising in all situations involving nonperformance by IBM pursuant to, or in any way related to the subject matter of this Statement of Warranty, IBM's liability, will be limited to the total amount you paid for the Machine that is the subject of the claim. Applicability of suppliers and resellers (unchanged).*

The following replaces the third paragraph of this Section: Unless otherwise provided by mandatory law, IBM and your reseller are not liable for any of the following: (items 1 and 2 unchanged) 3) indirect damages, even if IBM or your reseller is informed of their possibility.

SOUTH AFRICA, NAMIBIA, BOTSWANA, LESOTHO AND SWAZILAND

Limitation of Liability: *The following is added to this Section: IBM's entire liability to you for actual damages arising in all situations involving nonperformance by IBM in respect of the subject matter of this Statement of Warranty will be limited to the charge paid by you for the individual Machine that is the subject of your claim from IBM.*

UNITED KINGDOM

Limitation of Liability: *The following replaces items 1 and 2 of the first paragraph of this Section:*

1. death or personal injury or physical damage to your real property solely caused by IBM's negligence;
2. the amount of any other actual direct damages or loss, up to 125 percent of the charges (if recurring, the 12 months' charges apply) for the Machine that is the subject of the claim or which otherwise gives rise to the claim;

The following item is added to this paragraph: 3. breach of IBM's obligations implied by Section 12 of the Sale of Goods Act 1979 or Section 2 of the Supply of Goods and Services Act 1982.

Applicability of suppliers and resellers (unchanged).

The following is added to the end of this Section: IBM's entire liability and your sole remedy, whether in contract or in tort, in respect of any default shall be limited to damages.

Appendix C. Notices

This publication was developed for products and services offered in the U.S.A.

IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to:

*IBM Director of Licensing
IBM Corporation
North Castle Drive
Armonk, NY 10504-1785

Other company, product, or service names may be trademarks or service marks of others.

Important notes

Processor speeds indicate the internal clock speed of the microprocessor; other factors also affect application performance.

CD-ROM drive speeds list the variable read rate. Actual speeds vary and are often less than the maximum possible.

When referring to processor storage, real and virtual storage, or channel volume, KB stands for approximately 1000 bytes, MB stands for approximately 1 000 000 bytes, and GB stands for approximately 1 000 000 000 bytes.

When referring to hard disk drive capacity or communications volume, MB stands for 1 000 000 bytes, and GB stands for 1 000 000 000 bytes. Total user-accessible capacity may vary depending on operating environments.

Maximum internal hard disk drive capacities assume the replacement of any standard hard disk drives and population of all hard disk drive bays with the largest currently supported drives available from IBM.

Maximum memory may require replacement of the standard memory with an optional memory module.

IBM makes no representation or warranties regarding non-IBM products and services that are ServerProven[®], including but not limited to the implied warranties of merchantability and fitness for a particular purpose. These products are offered and warranted solely by third parties.

IBM makes no representations or warranties with respect to non-IBM products. Support (if any) for the non-IBM products is provided by the third party, not IBM.

Some software may differ from its retail version (if available), and may not include user manuals or all program functionality.

Electronic emission notices

IBM IntelliStation M Pro Types 6219

Federal Communications Commission (FCC) statement

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult an IBM authorized dealer or service representative for help.

Properly shielded and grounded cables and connectors must be used in order to meet FCC emission limits. Proper cables and connectors are available from IBM authorized dealers. IBM is not responsible for any radio or television interference caused by using other than recommended cables and connectors or by unauthorized changes or modifications to this equipment. Unauthorized changes or modifications could void the user's authority to operate the equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FOR HOME OR OFFICE USE

Industry Canada Class B emission compliance statement

This Class B digital apparatus complies with Canadian ICES-003.

Avis de conformité à la réglementation d'Industrie Canada

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

European Union EMC Directive conformance statement

This product is in conformity with the protection requirements of EU Council Directive 89/336/EEC on the approximation of the laws of the Member States relating to electromagnetic compatibility. IBM cannot accept responsibility for any failure to satisfy the protection requirements resulting from a nonrecommended modification of the product, including the fitting of non-IBM option cards. This product has been tested and found to comply with the limits for Class B Information Technology Equipment according to CISPR 22/European Standard EN 55022. The limits for Class B equipment were derived for typical residential environments to provide reasonable protection against interference with licensed communication devices.

Japanese Voluntary Control Council for Interference (VCCI) statement

この装置は、情報処理装置等電波障害自主規制協議会（VCCI）の基準に基づくクラスB情報技術装置です。この装置は、家庭環境で使用することを目的としていますが、この装置がラジオやテレビジョン受信機に近接して使用されると、受信障害を引き起こすことがあります。
取扱説明書に従って正しい取り扱いをして下さい。

Power cords

For your safety, IBM provides a power cord with a grounded attachment plug to use with this IBM product. To avoid electrical shock, always use the power cord and plug with a properly grounded outlet.

IBM power cords used in the United States and Canada are listed by Underwriter's Laboratories (UL) and certified by the Canadian Standards Association (CSA).

For units intended to be operated at 115 volts: Use a UL-listed and CSA-certified cord set consisting of a minimum 18 AWG, Type SVT or SJT, three-conductor cord, a maximum of 15 feet in length and a parallel blade, grounding-type attachment plug rated 15 amperes, 125 volts.

For units intended to be operated at 230 volts (U.S. use): Use a UL-listed and CSA-certified cord set consisting of a minimum 18 AWG, Type SVT or SJT, three-conductor cord, a maximum of 15 feet in length and a tandem blade, grounding-type attachment plug rated 15 amperes, 250 volts.

For units intended to be operated at 230 volts (outside the U.S.): Use a cord set with a grounding-type attachment plug. The cord set should have the appropriate safety approvals for the country in which the equipment will be installed.

IBM power cords for a specific country or region are usually available only in that country or region.
